

Newest Nutanix New NCP-US-6.10 Real Test | Try Free Demo before Purchase

BONUS!!! Download part of PracticeMaterial NCP-US-6.10 dumps for free: <https://drive.google.com/open?id=16vdbJp80qYVsNVA9VcbrQ1k4cs04FB92>

PracticeMaterial is a website which is able to speed up your passing the Nutanix certification NCP-US-6.10 exams. Our Nutanix certification NCP-US-6.10 exam question bank is produced by PracticeMaterial's experts's continuously research of outline and previous exam. When you are still struggling to prepare for passing the Nutanix certification NCP-US-6.10 Exams, please choose PracticeMaterial's latest Nutanix certification NCP-US-6.10 exam question bank, and it will brings you a lot of help.

Our NCP-US-6.10 training materials provide 3 versions to the client and they include the PDF version, PC version, APP online version. Each version's using method and functions are different but the questions and answers of our NCP-US-6.10 study materials is the same. The client can decide which NCP-US-6.10 version to choose according their hobbies and their practical conditions. For instance, the PDF version is convenient for reading and supports the printing of our NCP-US-6.10 Study Materials. If client uses the PDF version of NCP-US-6.10 learning questions, you can also put on notes on it.

>> New NCP-US-6.10 Real Test <<

NCP-US-6.10 Reliable Dumps Ppt, NCP-US-6.10 Actual Exams

We provide three versions to let the clients choose the most suitable equipment on their hands to learn the NCP-US-6.10 study

materials such as the smart phones, the laptops and the tablet computers. We provide the professional staff to reply your problems about our study materials online in the whole day and the timely and periodical update to the clients. So you will definitely feel it is your fortune to buy our NCP-US-6.10 Study Materials.

Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 Sample Questions (Q44-Q49):

NEW QUESTION # 44

Question:

A Nutanix Files cluster is unreachable after an administrator changed its name.

What should the administrator do to solve the problem?

- A. Restart CVMs to apply the changes.
- **B. Delete old and add new DNS entries.**
- C. Restart FSVs to apply the changes.
- D. Delete active user sessions from Files.

Answer: B

Explanation:

Changing the name of a Nutanix Files cluster involves updating the DNS name resolution for its FSVs and VIPs. When the cluster's name changes:

The underlying IP addresses (CVMs, FSVs, VIPs) do not change.

However, DNS entries associated with the old cluster name become outdated, causing clients (including management interfaces and file share connections) to fail to resolve the new name to the correct IP addresses.

From the NUSA course troubleshooting section:

"After renaming a Files cluster, update the DNS entries to reflect the new name. Otherwise, clients and administrators will be unable to reach the cluster resources." Restarting CVMs or FSVs does not update DNS entries.

Deleting active user sessions won't fix the DNS resolution problem.

Therefore, to resolve the unreachability issue, the administrator must:

#Delete old DNS entries for the previous cluster name.

#Add new DNS entries mapping the new cluster name to the same IPs of the FSVs and VIP.

This ensures that all systems can properly resolve the new cluster name and reach the Nutanix Files services.

NEW QUESTION # 45

In File Analytics, what enables searching for a specific user or file to review activity?

- A. Analysis Session
- B. RBAC
- **C. Audit Trails**
- D. Anomalies Widget

Answer: C

Explanation:

Comprehensive and Detailed Explanation from Nutanix Unified Storage (NCP-US) and Nutanix Unified Storage Administration (NUSA) course documents:

In Nutanix Files, File Analytics is a powerful tool designed to provide visibility and insights into file system usage, security, and trends. Within File Analytics, different components are designed for distinct tasks:

* RBAC (Role-Based Access Control): This controls who can access which features within File Analytics but does not directly provide activity search capabilities.

* Audit Trails: The Audit Trails feature is specifically designed to search for user or file activity across the file system. It records detailed events such as file access, modifications, deletions, and other interactions. In the NUSA course, it's emphasized that Audit Trails is the primary tool for tracking activity of specific users or files.

The administrator can enter the name of a user or file in the search bar within Audit Trails to instantly pull up all related activities. This enables precise analysis and helps with troubleshooting or security investigations.

* Analysis Session: Analysis Sessions are used to group and run specific data analysis tasks. They do not directly provide searching for user/file activities.

* Anomalies Widget: The Anomalies Widget highlights unusual activity patterns but does not provide targeted search capabilities.

The NCP-US course also highlights Audit Trails as the go-to tool for forensic analysis and activity review, reinforcing that Audit

Trails is the correct and most direct answer.

NEW QUESTION # 46

An administrator wants to provide access to users or to user groups to manage all existing Nutanix Objects instances without providing any write access to buckets on the Objects instances from the Prism Central web console.

What Role Based Access Control must be provided?

- A. Full Administrator
- B. Non Administrator
- C. Infra Administrator
- D. View Only Administrator

Answer: D

Explanation:

According to the Nutanix Unified Storage Administration (NUSA) course, specifically in the module "Configuring Access and Permissions for Nutanix Objects," the View Only Administrator role is the designated RBAC role that grants read-only access to the Objects instances' configuration, without the ability to modify or create new buckets.

The documentation states:

"The View Only Administrator role allows users to monitor and review existing Objects instances and buckets, but it restricts any configuration changes or write actions." This role precisely meets the administrator's stated requirement: to allow management of Objects instances without granting write access to buckets.

Reference:

Nutanix Unified Storage Administration (NUSA) course - Module: Configuring Access and Permissions for Nutanix Objects.

Nutanix Unified Storage (NCP-US) Study Guide - Topic: Nutanix Objects RBAC Roles and Permissions.

NEW QUESTION # 47

An administrator needs to configure an SMB share for the user profiles in a company. Which network share type is most suitable for this task?

- A. A WORM share
- B. A distributed share
- C. A standard share
- D. A connected share

Answer: B

Explanation:

To configure an SMB share for user profiles in a company using Nutanix Files, the most suitable network share type is a "distributed share". User profiles typically require a share that can scale with the number of users, provide high availability, and ensure consistent performance across multiple clients. A distributed share in Nutanix Files is designed to meet these needs by distributing data and workload across all File Server Virtual Machines (FSVMs) in the file server, ensuring scalability and load balancing.

The Nutanix Unified Storage Administration (NUSA) course states, "A distributed share in Nutanix Files is ideal for workloads like user profiles, as it leverages all FSVMs to provide scalability, high availability, and consistent performance for large numbers of concurrent users." Distributed shares are optimized for environments where multiple users access the share simultaneously, such as in user profile scenarios where each user has a profile folder accessed via SMB. This share type ensures that the workload is balanced across FSVMs, preventing any single FSVM from becoming a bottleneck.

The Nutanix Certified Professional - Unified Storage (NCP-US) study guide further elaborates that

"distributed shares are recommended for user profile storage in Nutanix Files, as they provide seamless scalability and fault tolerance by distributing data across all FSVMs in the file server." This is particularly important for user profiles, which are often accessed during login/logout events, requiring low latency and high concurrency support.

The other options are incorrect:

- A standard share: A standard share is hosted on a single FSVM, which can become a performance bottleneck and lacks the scalability needed for user profiles with many concurrent users.

- A connected share: There is no such share type as a "connected share" in Nutanix Files; this term is not applicable.

- A WORM share: A WORM (Write Once, Read Many) share is designed for immutable data retention (e.g., for compliance), not for user profiles, which require frequent read/write operations.

The NUSA course documentation emphasizes that "distributed shares are the best choice for user profile storage in Nutanix Files,

ensuring scalability and performance for enterprise environments with many users." References:

- Nutanix Unified Storage Administration (NUSA) Course, Section on Nutanix Files: "Configuring distributed shares for user profiles."
- Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Topic 2: Configure and Utilize Nutanix Unified Storage, Subtopic: "Share types in Nutanix Files for user workloads."
- Nutanix Documentation (<https://www.nutanix.com>), Nutanix Files Administration Guide: "Distributed shares for user profile storage."

NEW QUESTION # 48

Question:

What would an administrator need to do in order to move tagged objects to a remote Nutanix Objects instance after a period of time?

- A. Configure WORM on the Bucket and a Lifecycle Policy to tier tagged objects within the bucket.
- B. Configure a Cloud Bucket Endpoint with the Nutanix provider and a Lifecycle Policy to tier all objects within the bucket.
- C. Configure WORM on the Bucket and a Lifecycle Policy to tier all objects within the bucket.
- **D. Configure a Cloud Bucket Endpoint with the Nutanix provider and a Lifecycle Policy to tier tagged objects within the bucket.**

Answer: D

Explanation:

Lifecycle Policies in Nutanix Objects allow administrators to automate data tiering and archival based on specific criteria, including object tagging. According to the NUSA training:

"A Lifecycle Policy, combined with a Cloud Bucket Endpoint, enables automatic movement of objects (based on tags) to a remote Nutanix Objects instance or compatible S3 storage." Here's the detailed process:

The administrator first configures a Cloud Bucket Endpoint to establish connectivity to the remote Nutanix Objects instance.

Then, they create a Lifecycle Policy that targets objects with specific tags for tiering.

This policy ensures that only tagged objects meeting the policy's criteria are moved to the remote storage location.

Enabling WORM on the bucket is not required for tiering; WORM is for immutability. The key mechanism for tiering tagged objects is:

#Cloud Bucket Endpoint + Lifecycle Policy for tagged objects.

NEW QUESTION # 49

.....

Do you often envy the colleagues around you can successfully move to a larger company to achieve the value of life? Are you often wondering why your classmate, who has scores similar to yours, can receive a large company offer after graduation and you are rejected? In fact, what you lack is not hard work nor luck, but NCP-US-6.10 Guide question. If you do not have extraordinary wisdom, do not want to spend too much time on learning, but want to reach the pinnacle of life through NCP-US-6.10 exam, then you must have NCP-US-6.10 question torrent.
