Our company has dedicated ourselves to develop the Sitecore-XM-Cloud-Developer study materials for all candidates to pass the exam easier, also has made great achievement after more than ten years' development. As the certification has been of great value, a right Sitecore-XM-Cloud-Developer study material can be your strong forward momentum to help you pass the exam like a hot knife through butter. On the contrary, it might be time-consuming and tired to prepare for the Sitecore-XM-Cloud-Developer Exam without a specialist study material. So it's would be the best decision to choose our Sitecore-XM-Cloud-Developer study materials as your learning partner.

Sitecore Sitecore-XM-Cloud-Developer Exam Syllabus Topics:

Topic	Details
Topic 1	• XM Cloud Pages: The XM Cloud Pages discusses the user experience of an application or website. In topic, you encounter questions about individual building blocks. These blocks define the layout and content of each page.
Topic 2	• Sitecore APIs & Webhooks: In this topic, you encounter questions related to the different Sitecore APIs. These APIs are available for developers. With these APIs, developers interact with XM Cloud data and functionality.

Topic 3	• Sitecore Content Serialization: The topic delves into various ways to serialize and deserialize Sitecore content in XM Cloud applications. This topic also includes understanding JSON, XML, and OData serialization.
Topic 4	• Deployment of XM Cloud Projects: In this topic different methods to deploy XM Cloud projects including continuous integration and continuous delivery (CI • CD), manual deployment, and using the Sitecore XM Cloud Reference Manager are discussed.
Topic 5	• Data Modeling: This topic explains how your data is structured. It explains different entities, their attributes, and how they connect. Furthermore, it explains how to opt the right model, such as relational or hierarchical.

Sitecore Sitecore-XM-Cloud-Developer Exam Dumps Offers Exam Passing Money Back Guarantee

About some esoteric points, they illustrate with examples for you. Our Sitecore-XM-Cloud-Developer practice materials are the accumulation of professional knowledge worthy practicing and remembering, so you will not regret choosing our Sitecore-XM-Cloud-Developer practice materials. The best way to gain success is not cramming, but to master the discipline and regular exam points of question behind the tens of millions of questions. Our Sitecore-XM-Cloud-Developer practice materials can remove all your doubts about the exam. If you believe in our products this time, you will enjoy the happiness of success all your life.

Sitecore XM Cloud Developer Certification Exam Sample Questions (Q43-Q48):

NEW QUESTION # 43
A developer is working with Sitecore's Authoring and Management API to manage their Sitecore content using GraphQL. They want to explore and interact with the API using the GraphQL integrated development environment (IDE). Which of the following statements is correct about using the GraphQL IDE?

- A. A developer needs to be in the sitecore\Sitecore Client Users role to access the GraphQL IDE.
- B. The GraphQL IDE provides read-only access to the API.
- C. The GraphQL IDE is only available for non-production environments to ensure secure interactions.
- D. A developer needs to be in the sitecore\Admin role to access the GraphQL IDE.

Answer: D

Explanation:
Sitecore XM Cloud provides aGraphQL Integrated Development Environment (IDE)to allow developers toexplore and interactwith the Sitecore Content API. This IDE is available at:
#/sitecore/api/graph/ide
For security reasons,only users with the sitecore\Admin role can access this GraphQL IDE. This restriction ensures that only authorized users can interact with and test queries against the Sitecore content data.
Now, let's analyze each option:
* (A) Correct## A developer must have the sitecore\Admin role to access the GraphQL IDE.
* (B) Incorrect## The sitecore\Sitecore Client Users role does not grant access to the GraphQL IDE.
* (C) Incorrect## The GraphQL IDE allows bothread and writeoperations, not just read-only access.
* (D) Incorrect## The GraphQL IDE is available for both development and production environments, but proper access control should be enforced in production.

NEW QUESTION # 44
To connect Sitecore Pages to your local XM Cloud instance, which steps are involved?

- A. Open Pages and create an entry in Local Storage for the key "Sitecore.Pages.LocaIXmCloudUrl" with the following value: https://pages.sitecorecloud.io
- B. Open the local Content Management instance and set the predefined rendering host field value in Sitecore to https://pages.sitecorecloud.io
- C. Open the local Content Management instance and set the predefined rendering host field value in Sitecore tohttps://xmcloudcm.localhost
- D. Open Pages and create an entry in Local Storage for the key "Sitecore.Pages.LocaIXmCloudUrl" with the following value: https://xmcloudcm. localhost

Answer: D

Explanation:
According to the Sitecore XM Cloud Documentation for Developers1, after setting up your local XM Cloud development environment, Sitecore Pages is not connected to your locally running XM Cloud instance. You can connect your local XM Cloud application to Sitecore Pages by setting a local storage key in your browser.
This allows you to use Sitecore Pages to edit content and layouts on your local front-end application.To connect Sitecore Pages to your local XM Cloud instance, you need to follow these steps2:
In your browser, navigate to the Sitecore Pages application.
Open the developer tools console of your browser and find the local storage section.The location differs between browsers:
For Chrome and Edge, open the Application panel. In the Storage section, expand the Local Storage section.
For Firefox, open the Storage panel, and expand the Local Storage section.
In the Local Storage panel, click the entry for Sitecore Pages9to reveal the local storage entries.
Create a new entry by adding a new row with the following values:
Key: Sitecore.Pages.LocalXmCloudUrl.
Value: the URL of your local XM Cloud instance.For example,10.
Refresh the9page to see your local front-end application.

NEW QUESTION # 45
The XM Cloud Pages editor comes with a set of devices (for example, Desktop Regular and Mobile) with predefined settings.
Which of the following fields must a developer specify to add and configure an additional device?

- A. Device height, visibility, an icon to represent the device
- B. Device height, visibility, responsive breakpoints
- C. Device width, visibility, responsive breakpoints
- D. Device width, visibility, an icon to represent the device

Answer: D

Explanation:
When adding and configuring an additional device in the XM Cloud Pages editor, a developer must specify the device width in pixels, the visibility options (Disabled, Fixed, Optional), and an icon to represent the device. These settings are crucial for simulating how content will appear on different devices within the Pages editor.
References:The Sitecore XM Cloud documentation provides detailed instructions on adding and configuring devices in the Pages editor, including specifying the device width, visibility options, and selecting an icon1.

NEW QUESTION # 46
When deploying to XM Cloud, how are Sitecore Content Serialization (SCS) serialized items created in the Content Management (CM) instance?

- A. The XM Cloud deploy process uses serialized item batches through REST APIs at the XM Cloud CM to speed up serialization.
- B. A build pipeline must be created to use the SCS CLI push commands to push content after the XM Cloud Deploy app finishes.
- C. The XM Cloud deploy process uses the SCS CLI to do a push once the CM instance is active.
- D. TheXM Cloud deploy process creates an Items as Resources (IAR) file and layers this into the CM instance.

Answer: D

Explanation:
InXM Cloud, Sitecore Content Serialization (SCS) is used to manage serialized items and synchronize them with theContent Management (CM) instance. Unlike traditional Sitecore deployments where items are manually pushed usingSCS CLI, XM Cloud follows an automated approach usingItems as Resources (IAR).
* During the Deployment Process:
* TheXM Cloud Deployprocess packagesserialized contentinto anItems as Resources (IAR) file.
* This IAR file contains theserialized Sitecore itemsand is included in the deployment package.
* When the CM Instance Starts:
* The IAR file is automaticallylayered into the CM database, ensuring the content structure is synchronized without requiring manual SCS CLI commands.
* Benefits of the IAR Approach:
* Faster and More Reliable: Instead of pushing serialized items manually, theIAR file is pre- packagedand automatically applied.
* No Additional Build Steps Required: Unlike traditional deployments where a separate script or pipeline is needed to push items, XM Cloudhandles this automatically.
* Ensures Content Integrity: Items in the IAR file are versioned and deployedconsistently across environments.
How Sitecore Content Serialization (SCS) Works in XM Cloud Deployments:
Why Are the Other Options Incorrect?#A. The XM Cloud deploy process uses the SCS CLI to do a push once the CM instance is active.
* Incorrect, because XM Cloud doesnot rely on the SCS CLI for pushing itemsduring deployment.
Instead, it packages the items into anIAR file, which is automatically applied.
#C. A build pipeline must be created to use the SCS CLI push commands to push content after the XM Cloud Deploy app finishes.
* Incorrect, because XM Cloudautomatically deploys items via the IAR file. There is no need for a separate pipeline to push serialized content manually.
#D. The XM Cloud deploy process uses serialized item batches through REST APIs at the XM Cloud CM to speed up serialization.
* Incorrect, because Sitecore doesnot use REST APIs to push serialized itemsin XM Cloud deployments. Instead, the IAR mechanism ensures content is deployed efficiently.

NEW QUESTION # 47
A developer wants to deploy to XM Cloud, but the project is not using a source code provider that has an out- of-the-box connector for XM Cloud. How can they deploy the site to XM Cloud?

- A. Create a Sitecore Update Package using SCS to include items and files.
- B. Use Vercel to connect to their source code provider and deploy.
- C. Create a custom connector to be used with the XM Cloud Deploy app.
- D. Use the Sitecore Cloud CLI to create a project and deployment.

Answer: D

NEW QUESTION # 48
......

To help candidates study and practice the Sitecore-XM-Cloud-Developer exam questions more interesting and enjoyable, we have designed three different versions of the Sitecore-XM-Cloud-Developer test engine that provides you a number of practice ways on the exam questions and answers: the PDF, Software and APP online. The PDF verson can be printable. And the Software version can simulate the exam and apply in Windows system. The APP online version of the Sitecore-XM-Cloud-Developer training guide can apply to all kinds of the eletronic devices, such as IPAD, phone, laptop and so on.
