

Newest Test ANS-C01 Questions Vce & Leading Provider in Qualification Exams & Updated Valid ANS-C01 Exam Objectives

Question 1

- (a) Xylem and phloem.
(b) Plants require organ systems because as multicellular organisms, their requirements for efficient cell functioning cannot be met by diffusion alone due to the low surface area to volume ratio. Cells must be aggregated to form organs and organs of similar function grouped together to form systems that allow plants to distribute nutrients and also to efficiently remove wastes, two functions which are essential for survival.

Tip: Grasp the concepts of xylem and phloem by linking their functions to the broader biological system of plants.

Why this is a strong response: The answer links the necessity of organ systems to the limitations of diffusion in multicellular organisms. This approach shows the student's ability to apply fundamental knowledge of transport systems to a larger context.

Question 2

- (a) A is from a dry environment; B is from a semi-aquatic environment.
(b) The plant from a semi-aquatic environment has very broad leaves as it has a reliable supply of water and does not need to minimise water loss. Plant A is from a dry environment and has narrow leaves to minimise surface area and the amount of water lost. Light is abundant so the leaves do not need a large surface area.

Tip: Reflect on how structure matches function in plants. Relate the adaptations (broad vs narrow leaves) to your knowledge of water conservation.

Why this is a strong response: The answer highlights how specific plant adaptations meet environmental needs, reinforcing understanding of plant systems and their broader role in homeostasis.

Amazon Test ANS-C01 Questions Vce - Precise Valid ANS-C01 Exam

Objectives and Fast-download AWS Certified Advanced Networking Specialty Exam Brain Exam

Our ANS-C01 real exam materials have high appraisal in the market for their quality and high efficiency. Because satisfied customer is the best ads, and the word of mouth communication by the customers give others more sense of credibility than any other form of marketing communication. We know a satisfied customer will come back again for the same or different need to the company, so we always provide high-rank ANS-C01 real exam materials over ten years. They have experienced all trials of the market these years approved by experts. Besides, they are easy to assimilate so if you get stuck in the bottleneck of review, and under the guidance of our AWS Certified Advanced Networking Specialty Exam exam question they are widely regarded as top notch in this area. Recently our ANS-C01 Guide prep rise to the forefront in the field of practice materials. So if you need other ANS-C01 real exam materials from us, we will not let you down not even once. Hope you pass the exam once successfully by our AWS Certified Advanced Networking Specialty Exam exam question and recommend them to your friends. We are sure you will be splendid!

Amazon AWS Certified Advanced Networking Specialty Exam Sample Questions (Q87-Q92):

NEW QUESTION # 87

You need to find the MTU used by another instance, but tracepath is not working. You know the instance you are trying to tracepath has open security group and NACL rules. Which protocol do you need to allow to access your instance to remedy this? Response:

- A. Protocol 1: ICMP
- B. Protocol 6: TCP
- C. Protocol 17: UDP
- D. Protocol 47: GRE

Answer: A

NEW QUESTION # 88

A company is migrating its on-premises network from its data center in Virginia to its data center in New York. The AWS Direct Connect connections for the Virginia and New York data center locations are both associated to the us-east-1 Region. The company needs to migrate a private VIF on an existing Direct Connect hosted connection from Virginia to New York. The company's on-premises network uses the connection to access VPCs through a Direct Connect gateway in us-east-1. The company has already requested a new Direct Connect hosted connection from the new data center to the New York Direct Connect location.

Which solution will meet these requirements with the LEAST downtime?

- A. During a maintenance window, migrate the existing private VIF to the new Direct Connect hosted connection. Attach the existing private VIF to the existing Direct Connect gateway. Decommission the existing Direct Connect connection.
- B. Create a new private VIF on the new Direct Connect hosted connection. Attach the new private VIF to the existing Direct Connect gateway. Configure BGP routing on the new private VIF as a backup route. Perform the switchover during a maintenance window by shutting down BGP on the existing private VIF. Decommission the existing Direct Connect connection.
- C. During a maintenance window, delete the existing private VIF and create a new private VIF to the new Direct Connect hosted connection. Attach the new private VIF to the existing Direct Connect gateway. Decommission the existing Direct Connect hosted connection.
- D. Create a new private VIF on the new Direct Connect hosted connection. Create a new Direct Connect gateway and attach the gateway to the new private VIF. Configure BGP routing on the new private VIF as a backup route. Perform the switchover during a maintenance window by shutting down BGP on the existing private VIF. Decommission the existing Direct Connect connection.

Answer: B

NEW QUESTION # 89

What is the default weight for a locally originated BGP route?

Response:

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

NEW QUESTION # 90

A company wants to use thin clients running virtual desktops to replace 500 desktop computers used by its call center employees. The company is evaluating Amazon WorkSpaces as a solution.

A network engineer who is testing with a thin client is unable to connect to Amazon WorkSpaces.

After entering credentials, the network engineer receives the following error:

"An error occurred while launching your WorkSpace. Please try again."

What should the network engineer do to resolve this issue?

- A. Update the company's corporate firewall to allow inbound access to UDP on port 4172 and TCP on port 4172. Open outbound ephemeral ports explicitly to allow return communication.
- B. Update the inbound rules on the security group assigned to Amazon WorkSpaces to allow UDP on port 4172 and TCP on port 4172.
- C. Update the company's corporate firewall to allow outbound access to UDP on port 4172 and TCP on port 4172. Open inbound ephemeral ports explicitly to allow return communication.
- D. Update the inbound rules on the network ACL on the subnets used for Amazon WorkSpaces to allow UDP on port 4172 and TCP on port 4172.

Answer: C

Explanation:

To connect to your WorkSpaces, the network that your Amazon WorkSpaces clients are connected to must have certain ports open to the IP address ranges for the various AWS services (grouped in subsets). These address ranges vary by AWS Region. These same ports must also be open on any firewall running on the client. For more information about the AWS IP address ranges for different Regions, see AWS IP Address Ranges in the Amazon Web Services General Reference.

NEW QUESTION # 91

When connecting an on-premises network to AWS APIs, which option provides the least amount of network jitter and latency?

Response:

- A. AWS Direct Connect private VIF
- B. VPC Endpoints
- C. VPN connection
- D. AWS Direct Connect public VIF

Answer: D

NEW QUESTION # 92

.....

Normally IT workers have two purposes to test for certification: one is just for certification as of job demand; two is setting one goal for striving. Why do you try our ANS-C01 new exam guide materials? Our products are valid tested by more than 6000 candidates and can help you clear exam certainly. Forget your puzzled and distressed mood, choosing our Amazon ANS-C01 new exam guide materials will help you success without any doubt.
