Infoblox Qualified NIOS DDI Expert - INE Sample Questions (Q33-Q38):

NEW QUESTION # 33
You are asked to provide a support bundle while on the phone with Infoblox Technical Support. What can you do to get one?

- A. Infoblox Technical Support must generate it
- B. Create a database backup and extract the support bundle from it
- C. Use the CLI command "set support_bundle" to get it
- D. Retrieve it from the GM interface by navigating to Grid Manager and downloading from the toolbar

Answer: C

Explanation:
Comprehensive and Detailed In-Depth Explanation:Generating a support bundle for diagnostics:
* B:CLI command set support bundle (space, not underscore) generates and downloads a bundle (.tar.gz) with logs, configs, etc. Correct with typo adjustment.
* A:Backup is separate (Grid > Backup)-no bundle extraction. Incorrect.
* C:GUI offers download (Grid > Grid Manager > Toolbar > Download Support Bundle), but question specifies action-CLI fits phone context. Partially correct but not best.
* D:Support assists but doesn't generate-user action required. Incorrect.
* Practical Example:In an INE lab, run set support bundle, transfer it via SCP, and troubleshoot with support.References:Infoblox NIOS CLI Reference Guide - Support Bundle; INE Course Content:

NEW QUESTION # 34
What configuration can a Grid Master be? (Select all that apply.)

- A. A Grid Candidate Failover node
- B. A High Availability pair
- C. A single appliance
- D. A virtual appliance

Answer: B,C,D

Explanation:
Comprehensive and Detailed In-Depth Explanation:The Grid Master (GM) manages the NIOS Grid's database and coordination. Its possible configurations are:
* A (Virtual Appliance):A GM can be a vNIOS instance (e.g., on VMware), fully supported for virtualized deployments. Correct.
* B (Single Appliance):A standalone physical NIOS appliance (e.g., IB-4000) can serve as GM.
Common in smaller Grids. Correct.
* C (High Availability Pair):A GM can be an HA pair (two appliances sharing a VIP), ensuring redundancy. Correct.
* D (Grid Candidate Failover Node):Misnomer-Grid Master Candidate (GMC) is a separate role, not the GM itself. A GMC can be promoted to GM, but it's not a GM configuration. Incorrect.
* Setup:Configured via Grid Manager (Grid > Grid Properties).
* Practical Example:In an INE lab, you'd deploy a vNIOS GM, test HA failover, and troubleshoot sync, exploring deployment options.References:Infoblox NIOS Administrator Guide - Grid Master Setup; INE Course Objective: NIOS DDI Grid Deployment.

NEW QUESTION # 35
In the DHCPv4 failover NORMAL state, leases are only stored on the primary peer.

- A. False
- B. True

Answer: A

Explanation:
Comprehensive and Detailed In-Depth Explanation:In NORMAL state:
* Lease Storage:Both primary and secondary peers store leases via sync (TCP 647). Each manages its pool share (e.g., 50/50), but all leases are replicated for redundancy.
* Why False:"Only primary" contradicts failover's design-both peers maintain a full lease database for failover readiness.
* Practical Example:In an INE lab, check leases on both peers (Data Management > DHCP > Leases), simulate primary failure, and troubleshoot secondary takeover.References:Infoblox NIOS Administrator Guide - DHCP Failover; INE Course Content: NIOS DDI DHCP Troubleshooting.

NEW QUESTION # 36
What can an administrator do with an Option Filter in NIOS?

- A. Match only vendor-specific options such as Option 60
- B. Match on any DHCP options provided by the server
- C. Match on any DHCP options provided by the client
- D. Match only on device types

Answer: C

Explanation:
Comprehensive and Detailed In-Depth Explanation:In NIOS, DHCP Option Filters allow administrators to define rules for matching DHCP client requests based on the options they send in their DHCP packets. These filters are highly flexible and can matchany DHCP option provided by the client, such as Option 55 (Parameter Request List), Option 60 (Vendor Class Identifier), or custom options. This enables precise DHCP policy enforcement, like assigning specific IP ranges or options to certain devices. Option B is incorrect because filters apply to client requests, not server responses. Option C is too narrow-while Option 60 is common, filters aren't limited to vendor-specific options. Option D is vague and incorrect; device type matching is a subset of option matching. The INE course covers DHCP troubleshooting, including filter configuration.References:Infoblox NIOS Administrator Guide - DHCP Option Filters; INE Course Content:

NEW QUESTION # 37
When viewing NTP statistics in NIOS CLI, you notice an entry has the asterisk symbol () next to it. What does the asterisk symbol () signify?

- A. It means this NTP server is offline
- B. It means the NTP service is disabled for the Member
- C. It means this NTP server is unreachable
- D. It means the Member is synchronized to this NTP server

Answer: D

Explanation:
Comprehensive and Detailed In-Depth Explanation:NTP (Network Time Protocol) synchronization is critical for Grid operations, and NIOS CLI provides status via show ntp:
* Output Format:Lists NTP servers with symbols:
* *: The server the member is currently synchronized to (stratum and offset shown).
* +: Candidate server (reachable but not primary).
* -: Unreachable or rejected server.
* Asterisk Meaning:Indicates the active sync source, ensuring time consistency across the Grid.
* Options:
* A:Unreachable servers get a "-" or no symbol, not "*". Incorrect.
* B:Matches NTP convention and NIOS behavior-synchronized server. Correct.
* C:Offline servers don't sync and lack "*". Incorrect.
* D:Disabled NTP would prevent stats display, not mark a server. Incorrect.
* Practical Example:In an INE lab, you'd run show ntp, see "*pool.ntp.org," and troubleshoot time drift if the asterisk shifts, testing Grid stability.References:Infoblox NIOS CLI Reference Guide - NTP Commands; INE Course Content: NIOS DDI Grid Troubleshooting.
