NIOS-DDI-Expert Real Exam - NIOS-DDI-Expert Top Dumps

The NIOS-DDI-Expert training vce offered by Exam4Labs will be the best tool for you to pass your actual test. The NIOS-DDI-Expert questions & answers are especially suitable for the candidates like you for the coming exam test. The contents of Infoblox study dumps are edited by our experts who have rich experience, and easy for all of you to understand. So, with the skills and knowledge you get from NIOS-DDI-Expert practice pdf, you can 100% pass and get the certification you want.

Our Infoblox NIOS-DDI-Expert practice exam software is the most impressive product to learn and practice. We have a team of professional software developers to ensure the software's productivity. After installation, Infoblox NIOS-DDI-Expert Practice Exam software is used without an internet connection.

Infoblox NIOS-DDI-Expert Top Dumps | NIOS-DDI-Expert Dumps Reviews

If you find any quality problems of our NIOS-DDI-Expert or you do not pass the exam, we will unconditionally full refund. Exam4Labs is professional site that providing Infoblox NIOS-DDI-Expert Questions and answers, it covers almost the NIOS-DDI-Expert full knowledge points.

Infoblox Qualified NIOS DDI Expert - INE Sample Questions (Q31-Q36):

NEW QUESTION # 31
Which action can an administrator safely perform during an upgrade?

- A. Setting time zone for a Grid Member
- B. Modify Member DHCP properties
- C. None of the above
- D. Update DNS views

Answer: A

NEW QUESTION # 32
How does the passive member of a High Availability (HA) pair receive its database updates?

- A. SSL VPN from the Grid Master
- B. bloxSync from the Grid Master
- C. SSL VPN from the Active node
- D. bloxSync from the Active node

Answer: D

Explanation:
Comprehensive and Detailed In-Depth Explanation:In an HA pair, the passive node stays synchronized with the active node to ensure seamless failover. This synchronization usesbloxSync, a proprietary Infoblox protocol that securely transfers database updates (e.g., DNS records, DHCP leases) between the HA pair members over an SSL-encrypted connection. Theactive node, being the operational member, directly provides these updates to the passive node. The Grid Master handles Grid-wide sync, but within an HA pair, the active node is the source. Options A and B misrepresent the mechanism (it's not a traditional VPN), and Option D incorrectly attributes the sync to the Grid Master. This is a critical HA troubleshooting topic in the INE course. References:Infoblox NIOS Documentation - HA Pair Configuration; INE Course Content: NIOS DDI Grid Troubleshooting.

NEW QUESTION # 33
Which of the following statements are true about NIOS CSV import? (Select all that apply.)

- A. You must use NIOS WAPI to leverage CSV import
- B. The CSV format is NIOS version-specific
- C. Not all fields of the CSV file are required. The mandatory fields are denoted by the * symbol
- D. You must use the Data Import Wizard (DIW) to leverage CSV import

Answer: C,D

Explanation:
Comprehensive and Detailed In-Depth Explanation:CSV import in NIOS allows bulk management of objects (e.g., DNS records, networks) via structured files. Let's evaluate each statement:
* A:The Data Import Wizard (DIW) in Grid Manager (Data Management > Import) is the primary GUI tool for CSV imports, guiding admins through file upload, format selection, and validation. While WAPI can also handle CSV, DIW is the standard method, making this true in the GUI context emphasized in INE. Correct.
* B:The CSV format adheres to a standard Infoblox structure (e.g., headers like "fqdn,ip_address"), but it's not strictly version-specific-core fields remain consistent across NIOS versions, though new features might add optional fields. Incorrect.
* C:In a CSV file, mandatory fields (e.g., "fqdn" for a host record) are marked with an asterisk (*) in the CSV template or documentation, while others (e.g., "comment") are optional. This flexibility is key for bulk operations. Correct.
* D:WAPI supports CSV import via API calls, but it's not required-DIW provides a GUI alternative.
This makes the "must" phrasing false. Incorrect.
* Practical Example:In an INE lab, you might use DIW to import a CSV with A records, ensuring only mandatory fields (marked *) are filled, troubleshooting any import errors via logs.References:Infoblox NIOS Administrator Guide - CSV Import; INE Course Objective: NIOS DDI Grid Deployment.

NEW QUESTION # 34
When controlling Grid Members under Grid > Grid Manager > Members, what control options are available from the Toolbar? Choose 3 answers

- A. Restart GUI
- B. Suspend
- C. Reboot
- D. Restart

Answer: B,C,D

Explanation:
Comprehensive and Detailed In-Depth Explanation:Grid Manager Toolbar (Grid > Members) offers member controls:
* A (Reboot):Reboots the appliance-full restart. Correct.
* B (Restart):Restarts services (e.g., DNS, DHCP) without reboot. Correct.
* C (Suspend):Pauses services-useful for maintenance. Correct.
* D:"Restart GUI" isn't a member-level option-GUI runs on GM, not per member. Incorrect.

* Practical Example:In an INE lab, reboot a member, restart services, suspend another, and troubleshoot impacts.References:Infoblox NIOS Administrator Guide - Member Controls; INE Course Content: NIOS DDI Grid Troubleshooting.

NEW QUESTION # 35
Which types of Zone are available for Add Zone? (Select all that apply.)

- A. Delegation
- B. Forward Zone
- C. Primary Zone
- D. Authoritative Zone

Answer: A,B,C,D

Explanation:
Comprehensive and Detailed In-Depth Explanation:In NIOS Grid Manager (Data Management > DNS > Add Zone), administrators can create various zone types to manage DNS resolution. All listed options are valid:
* A (Authoritative Zone):A zone where the Infoblox appliance is the authoritative source for DNS records (e.g., example.com with A, MX records). Correct.
* B (Forward Zone):A zone configured to forward queries to external DNS servers (e.g., forwarding "internal.com" to a corporate DNS). Correct.
* C (Primary Zone):Often synonymous with Authoritative Zone in Infoblox, it's a master zone hosting original DNS data (distinct from secondary zones). Correct.
* D (Delegation):A zone delegated to another name server (e.g., "sub.example.com" delegated to different NS records). Correct.
* Clarification:In NIOS, "Authoritative" and "Primary" are sometimes used interchangeably, but both are options in the Add Zone wizard, alongside Forward and Delegation zones.
* Practical Example:In an INE lab, you might add an Authoritative Zone for "lab.com," a Forward Zone for external lookups, and a Delegation for a subdomain, testing DNS troubleshooting across these types.
