

Nokia 4A0-112 premium VCE file, real 4A0-112 questions and answers

BTW, DOWNLOAD part of ExamTorrent 4A0-112 dumps from Cloud Storage: https://drive.google.com/open?id=1g_nHel55KRAjmRt85cLeXvD-G5LU6Mgb

The former exam candidates get the passing rate over 98 percent in recent years by choosing our 4A0-112 practice materials. You must be curious about the advantages of them. These traits briefly sum up our 4A0-112 study questions. So we take liberty of introducing our 4A0-112 learning guide for you, hoping you can find the best way to pass the exam. With our 4A0-112 exam prep, you will pass the exam with ease.

Nokia 4A0-112 exam is a valuable certification for network professionals who wish to demonstrate their expertise in the intermediate-level routing protocols used in large-scale networks. It is an essential certification for those who work in service provider networks, data centers, and enterprise networks. Candidates who pass the exam are recognized as experts in the field and are highly sought after by employers looking for skilled professionals to manage their network infrastructures.

Nokia 4A0-112 exam is a vendor-specific certification that is highly recognized in the industry. It is an excellent way for networking professionals to validate their skills and enhance their career prospects. Candidates who Pass 4A0-112 Exam are in high demand by employers who are looking for experts in network routing and switching. Nokia IS-IS Routing Protocol certification also provides a stepping stone to higher-level certifications in Nokia's certification program.

The Nokia 4A0-112 exam is comprised of 60 multiple-choice questions and has a duration of 90 minutes. To prepare for 4A0-112 exam, candidates must have a thorough understanding of the principles and concepts of the IS-IS routing protocol, as well as the skills necessary to configure, troubleshoot, and optimize its performance. Nokia provides resources, such as official training courses and guides, to help candidates prepare for the Nokia 4A0-112 exam.

4A0-112 Testking & 4A0-112 Latest Exam Format

Our 4A0-112 exam guide question is recognized as the standard and authorized study materials and is widely commended at home and abroad. Our 4A0-112 study materials boost superior advantages and the service of our products is perfect. We choose the most useful and typical questions and answers which contain the key points of the test and we try our best to use the least amount of questions and answers to showcase the most significant information. Our 4A0-112 learning guide provides a variety of functions to help the clients improve their learning. For example, the function to stimulate the exam helps the clients test their learning results of the 4A0-112 learning dump in an environment which is highly similar to the real exam.

Nokia IS-IS Routing Protocol Sample Questions (Q16-Q21):

NEW QUESTION # 16

Refer to the exhibit.

A static route has been configured on router R1 to reach the PC at 139.120.121.2.
What might be causing the ping to fail?

- A. The configured next hop does not belong to a subnet adjacent to R1.
- B. The configured static route needs to be a default route.
- C. Router R1 needs a static route to router R2.
- D. Router R2 needs a static route to the PC.

Answer: A

Explanation:

In the configuration on router R1, the static route is defined with the next-hop IP address of 139.120.121.1.

However, the next-hop IP address 139.120.121.1 does not belong to the same subnet as the directly connected interface on R1, which is 172.31.1.1/30. For the static route to work properly, the next-hop IP address must be reachable via a directly connected interface, meaning it must be within the same subnet.

Therefore, this mismatch in subnet adjacency is likely causing the failure to reach the destination (139.120.121.2).

NEW QUESTION # 17

Which of the following is NOT a function of the control plane a router?

- A. To exchange signaling messages with other routers.
- B. To establish routing paths to deliver packets from source to destination and to reestablish them in case of failure.
- C. To determine the best way to forward packets.
- D. To utilize the forwarding tables to forward data packets towards their destination.

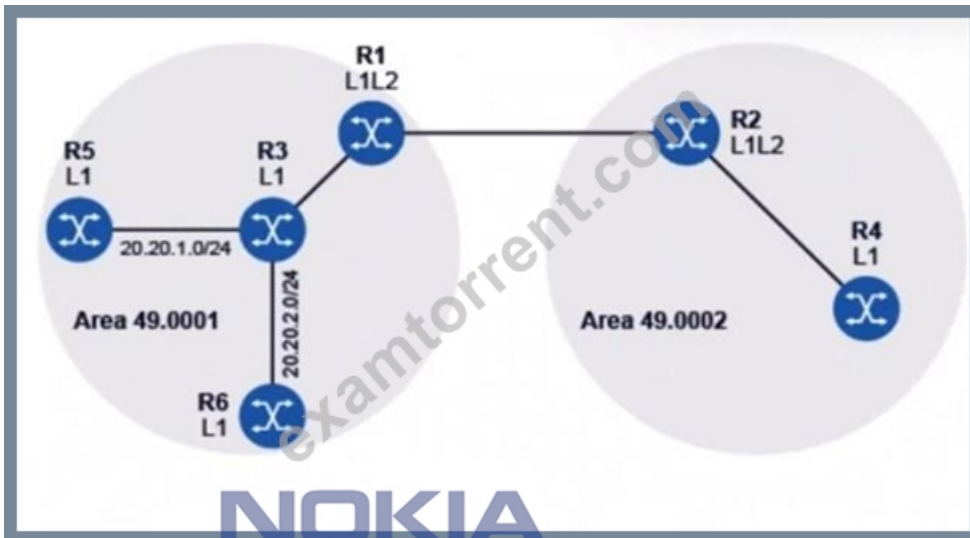

Answer: D

Explanation:

The data plane (or forwarding plane) is responsible for actually forwarding the data packets. It uses the information stored in the forwarding table to determine how to move packets from one interface to another toward their destination.

NEW QUESTION # 18

Refer to the exhibit.

In the IS-IS network shown, router R1 has been configured to summarize subnetworks 20.20.1.0/24 and 20.20.2.0/24 as 20.20.0.0/16. Which routers' routing tables will be reduced, compared to their routing tables before the summarization?

- A. Router R1
- B. Routers R1 and R2
- **C. Router R2**
- D. Routers R2 and R4

Answer: C

Explanation:

Router R1 is the one that performs the summarization of the two subnets (20.20.1.0/24 and 20.20.2.0/24) into the summarized route 20.20.0.0/16. However, R1 itself will not see any change in its routing table because it is directly connected to both subnets and already knows about them.

Router R2, which is in Area 49.0002, will benefit from this summarization because it previously had separate routes for both 20.20.1.0/24 and 20.20.2.0/24. After the summarization, R2 will only need to maintain a single route to 20.20.0.0/16, reducing the size of its routing table.

Router R4 does not directly benefit from the summarization because it is only connected to the Level 1 network and has no need for the summarized routes from R1. Thus, the summarization does not affect R4's routing table.

NEW QUESTION # 19

An IS-IS router receives a CSNP that references an older LSP than the one in its local database. What action is taken?

- A. The router sends a PSNP to its neighbor to request a copy of the LSP.
- B. The router sends a CSNP to its neighbor describing the newer LSPs in its database.
- C. The router updates its database with the new sequence number and floods a copy of the LSP to its other neighbors.
- **D. The router sends a copy of the referenced LSP from its database to its neighbor.**

Answer: D

Explanation:

When a router receives a CSNP (Complete Sequence Number PDU) that references an older LSP (Link-State PDU) than the one in its local database, it indicates that the neighbor is missing newer information.

In response, the router sends back a PSNP (Partial Sequence Number PDU) to the neighbor, which includes a copy of the LSPs it has in its local database that the neighbor may not yet have. This helps to synchronize the link-state information between routers.

NEW QUESTION # 20

Which of the following statements about IS-IS is FALSE?

- A. IS-IS uses the concept of level-1 and level-2 routers to implement hierarchy.

- B. A level-1 router forwards traffic to other areas through the nearest level-1 or level-2 router.
- C. A router becomes level-2 when it is associated with the backbone area.
- D. In IS-IS, routers are associated with an area, not the interfaces.

Answer: D

Explanation:

In IS-IS, routers are actually associated with interfaces rather than the entire router being associated with a single area. A router can have interfaces in multiple areas, and it is the interface's configuration that determines which area it belongs to.

NEW QUESTION # 21

.....

Pass your 4A0-112 exam certification with 4A0-112 reliable test. The ExamTorrent 4A0-112 practice material can guarantee you success at your first try. When you choose 4A0-112 updated dumps, you will enjoy instant downloads and get your 4A0-112 study files the moment you have paid for them. In addition, the update is frequent so that you can get the 4A0-112 latest information for preparation.
