New 4A0-D01 Test Tutorial - Sample 4A0-D01 Questions Pdf

If you want to buy Nokia 4A0-D01 exam information, ExamDiscuss will provide the best service and the best quality products. Our exam questions have been authorized by the manufacturers and third-party. And has a large number of IT industry professionals and technology experts, based on customer demand, according to the the outline developed a range of products to meet customer needs. Nokia 4A0-D01 Exam Certification with the highest standards of professional and technical information, as the knowledge of experts and scholars to study and research purposes. All of the products we provide have a part of the free trial before you buy to ensure that you fit with this set of data.

Nokia Data Center Fabric Fundamentals Exam Sample Questions (Q16-Q21):

NEW QUESTION # 16

Which of the following is NOT one of the reasons why BGP is used as the routing protocol in the data center?

- A. It is more efficient than link-state protocols like IS-IS and OSPF.

- B. It is a well understood and mature routing protocol.
- C. It supports both IPv4 and IPv6.
- D. BGP neighbors automatically discover each other.

Answer: A

Explanation:

BGP is not chosen because it is more efficient than link-state protocols; in fact, link-state protocols like IS-IS and OSPF generally provide faster convergence and more efficient route calculation. BGP is used in data centers mainly because it is mature, well understood, supports both IPv4 and IPv6, and offers flexible policy control.

NEW QUESTION # 17

Which of the following statements about configuration checkpoints in Nokia SR Linux is FALSE?

- A. The current running configuration can be saved as a JSON-formatted checkpoint file.
- **B. Checkpoint 0 is always the oldest checkpoint.**
- C. The operator can revert to any existing checkpoint.
- D. The operator can generate a new checkpoint when committing configuration changes.

Answer: B

Explanation:

In Nokia SR Linux, checkpoint numbering is dynamic. The system assigns the lowest available number to the most recent checkpoint, not necessarily "0." When the number of saved checkpoints exceeds the configured maximum, the oldest checkpoint is removed, and the remaining checkpoints are renumbered accordingly. Therefore, checkpoint "0" is not always the oldest checkpoint.

NEW QUESTION # 18

Based on the exhibit output, what CLI command can be used to display the contents of "bgp-log" in Nokia's SR Linux?

```
--{ + candidate shared default }--[ system logging ]--
A:dc-leaf-1# info
:
:
file bgp-log {
    format "%TIMEGENERATED:::date-rfc3339% %HOSTNAME% %syslogfacility-text%|%syslogseverity-text:1:4:uppercase%
%SYSLTAG%MSG:::sp-if-no-1st-sp%MSG:::drop-last-1f%\\n"
    subsystem bgp {
    }
    subsystem netinst {
    }
}
```

- **A. show system logging file bgp-log**
- B. info system logging buffer bgp-log
- C. info system logging file bgp-log
- D. show system logging buffer bgp-log

Answer: A

Explanation:

The "bgp-log" is defined as a log file in the configuration, so the correct command to display its contents is show system logging file bgp-log.

NEW QUESTION # 19

Which of the following statements about the CLI modes in Nokia's SR Linux is FALSE?

- A. The running mode is used to make configuration changes.
- B. The state mode displays the current configuration and operational information.
- **C. Users can switch from one mode to another using the enter command.**
- D. The show mode uses pre-defined reports to display operational information.

Answer: C

Explanation:

In Nokia SR Linux, users switch between CLI modes using specific commands like configure or exit, not an enter command. The enter command is not used for mode switching.

NEW QUESTION # 20

How does Nokia's Fabric Services System use a fabric intent to build the DC switch fabric?

- A. It uses a digital sandbox to build the configuration files for the DC fabric.
- **B. It uses a YAML file that defines the intended configuration state of the DC fabric.**
- C. It uses telemetry data to build the configuration files for the DC fabric.
- D. It uses a digital sandbox to connect workloads to the DC fabric.

Answer: B

Explanation:

Nokia's Fabric Services System uses a fabric intent defined in a declarative YAML file to specify the desired state of the data center fabric, which is then used to build and configure the fabric accordingly.

NEW QUESTION # 21

.....

The experts in our company have been focusing on the 4A0-D01 examination for a long time and they never overlook any new knowledge. The content of our 4A0-D01 study materials has always been kept up to date. Don't worry if any new information comes out after your purchase of our 4A0-D01 Practice Braindumps. We will inform you by E-mail when we have a new version and send it to you right away. So as long as you buy our 4A0-D01 learning guide, you can always have the latest exam questions and answers.
