NEW QUESTION # 15

You need to upgrade to NetApp ONTAP 9.12.1 software on your source cluster in a SnapMirror relationship. The source cluster differs from the destination cluster and you want to take advantage of version-flexible SnapMirror replication. Which option should you choose?

- A. SnapMirror automatically converts existing DP-type relationships to XDP-type relationships.
- B. Delete the XDP-type relationship and create a new DP-type relationship.
- C. Run the command `snapmirror resync` and set the type to XDP.
- **D. Delete the DP-type relationship and create a new XDP-type relationship.**

Answer: D

Explanation:

To take advantage of version-flexible SnapMirror (introduced with XDP-type relationships), you must delete the existing DP-type relationship and create a new one using type XDP. DP-type relationships do not support version flexibility, which allows the source and destination clusters to run different ONTAP versions.
