

NSE5_FSM-6.3 Guide Braindumps Is Typically Beneficial for NSE5_FSM-6.3 Exam - ITexamReview

BTW, DOWNLOAD part of ITexamReview NSE5_FSM-6.3 dumps from Cloud Storage: https://drive.google.com/open?id=1F0fwBGN_PCQ2tv2Uls5Ln69XfZuQoAW

People always tend to neglect the great power of accumulation, thus the NSE5_FSM-6.3 study materials can not only benefit one's learning process but also help people develop a good habit of preventing delays. We have full confidence to ensure that you will have an enjoyable study experience with our NSE5_FSM-6.3 Study Materials, which are designed to arouse your interest and help you pass the exam more easily. You will have a better understanding after reading the following advantages.

We have always taken care to provide the best Fortinet NSE5_FSM-6.3 exam dumps to our customers. That's why we offer many other benefits with our product. We provide a demo version of the real product to our customers to clear their doubts about the truthfulness and accuracy of Fortinet NSE 5 - FortiSIEM 6.3 (NSE5_FSM-6.3) preparation material. You can try the product before you buy it.

New NSE5_FSM-6.3 Braindumps Files, NSE5_FSM-6.3 Knowledge Points

As far as our NSE5_FSM-6.3 study guide is concerned, the PDF version brings you much convenience with regard to the following advantage. The PDF version of our NSE5_FSM-6.3 learning materials contain demo where a part of questions selected from the entire version of our NSE5_FSM-6.3 Exam Quiz is contained. In this way, you have a general understanding of our NSE5_FSM-6.3 actual prep exam, which must be beneficial for your choice of your suitable exam files.

Fortinet NSE5_FSM-6.3 Certification Exam is a comprehensive exam that comprises multiple-choice questions. To pass the exam, one needs to demonstrate a thorough understanding of the FortiSIEM 6.3 solution, its features, and how to use them to monitor and manage network security effectively. Fortinet NSE 5 - FortiSIEM 6.3 certification exam is an excellent way to validate one's skills in the field of network security and increase their employability.

Fortinet NSE 5 - FortiSIEM 6.3 Sample Questions (Q35-Q40):

NEW QUESTION # 35

In the rules engine, which condition instructs FortiSIEM to summarize and count the matching evaluated data?

- A. Aggregation
- B. Filters
- C. Time Window

- D. Group By

Answer: A

Explanation:

Rules Engine in FortiSIEM: The rules engine evaluates incoming events based on defined conditions to detect incidents and anomalies.

Aggregation Condition: The aggregation condition instructs FortiSIEM to summarize and count the matching evaluated data.

* Function: Aggregation is used to group events based on specified criteria and then perform operations such as counting the number of occurrences within a defined time window.

Purpose: This allows for the detection of patterns and anomalies, such as a high number of failed login attempts within a short period.

References: FortiSIEM 6.3 User Guide, Rules Engine section, which explains how aggregation is used to summarize and count matching data.

NEW QUESTION # 36

Which database is used for storing anomaly data, that is calculated for different parameters, such as traffic and device resource usage running averages, and standard deviation values?

- A. Profile DB
- B. Event DB
- C. CMDB
- D. SVN DB

Answer: A

Explanation:

* Anomaly Data Storage: Anomaly data, including running averages and standard deviation values for different parameters such as traffic and device resource usage, is stored in a specific database.

* Profile DB: The Profile DB is used to store this type of anomaly data.

Function: It maintains statistical profiles and baselines for monitored parameters, which are used to detect anomalies and deviations from normal behavior.

* Significance: Storing anomaly data in the Profile DB allows FortiSIEM to perform advanced analytics and alerting based on deviations from established baselines.

* Reference: FortiSIEM 6.3 User Guide, Database Architecture section, which describes the purpose and contents of the Profile DB in storing anomaly and baseline data.

NEW QUESTION # 37

An administrator is configuring FortiSIEM to discover network devices and receive syslog from network devices. Which statement is correct?

- A. FortiSIEM uses privileged credentials to log in to devices and make network configuration changes.
- B. FortiSIEM automatically configures network devices to send syslog using the GUI discovery process.
- C. FortiSIEM automatically configures network devices to send syslog using the auto log discovery process.
- D. Syslog configuration must be done manually on devices by the network administrator.

Answer: D

Explanation:

Syslog Configuration in FortiSIEM: For FortiSIEM to receive syslog messages from network devices, those devices need to be properly configured to send syslog data to FortiSIEM.

Manual Configuration Requirement: FortiSIEM does not automatically configure network devices to send syslog messages. Instead, this configuration must be performed manually by the network administrator.

Process Overview: The network administrator must access each device and set up the syslog parameters to direct log data to the FortiSIEM collector's IP address.

Discovery Process: While FortiSIEM can discover network devices using SNMP, WMI, and other protocols, the configuration of syslog on these devices is beyond its scope and requires manual intervention.

References: FortiSIEM 6.3 User Guide, Device Configuration and Syslog Integration sections, which explain the requirements and steps for setting up syslog forwarding on network devices.

NEW QUESTION # 38

To determine SNMP discovery issues, which is the best command from the backend?

- A. snmpstat
- B. phSNMPTTest
- C. snmpwalk

Answer: C

NEW QUESTION # 39

Refer to the exhibit.

The screenshot shows the 'Edit SubPattern' configuration window in Fortinet's management interface. The 'Name' field is set to 'DomainAcctLockout'. The 'Filters' section contains two rules: 'Event Type' is 'IN' 'EventTypes: Domain Account Lockout' and 'Reporting IP' is 'IN' 'Applications: Domain Controller'. The 'Aggregate' section shows 'COUNT(Matched Events)' is '1'. The 'Group By' section shows 'Reporting Device', 'Reporting IP', and 'User' as attributes to be grouped by.

Which section contains the subpattern configuration settings that determine how many matching events are needed to trigger the rule?

- A. Filters
- B. Actions
- C. Aggregate
- D. Group By

Answer: C

NEW QUESTION # 40

.....

Having been handling in this line for more than ten years, we can assure you that our NSE5_FSM-6.3 study questions are of best quality and reasonable prices for your information. We offer free demos of the latest version covering all details of our NSE5_FSM-6.3 Exam Braindumps available at present as representatives. So NSE5_FSM-6.3 practice materials come within the scope of our business activities. Choose our NSE5_FSM-6.3 learning guide, you won't regret!
