

NSE6_FSW-7.2 Guide Torrent & NSE6_FSW-7.2 Exam Fee

P.S. Free & New NSE6_FSW-7.2 dumps are available on Google Drive shared by Exam4Docs: https://drive.google.com/open?id=1wUBI1pfHLQV4Mw6vsSU6zYnk44NfCL_0

Owing to the industrious dedication of our experts and other working staff, our NSE6_FSW-7.2 study materials grow to be more mature and are able to fight against any difficulties. Our NSE6_FSW-7.2 preparation exam have achieved high pass rate in the industry, and we always maintain a 99% pass rate with our endless efforts. We have to admit that behind such a starling figure, there embrace mass investments on our NSE6_FSW-7.2 Exam Questions from our company.

Fortinet NSE6_FSW-7.2 is a certification exam that validates the skills and expertise of network professionals in deploying, configuring, and managing the FortiSwitch 7.2 infrastructure. NSE6_FSW-7.2 exam is one of the most widely recognized certifications in the industry and demonstrates that a candidate has a solid understanding of network security concepts and best practices.

Pass Guaranteed Quiz Fortinet - Fantastic NSE6_FSW-7.2 Guide Torrent

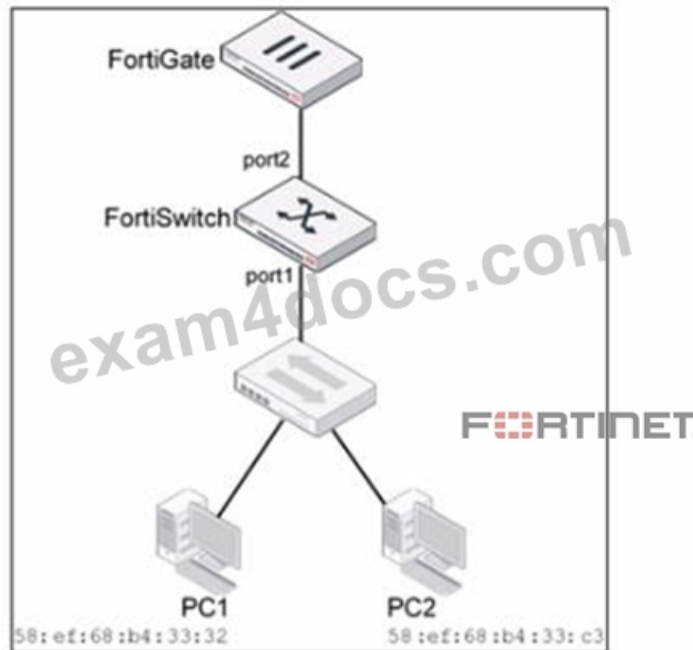

We aim to provide our candidates with real Fortinet vce dumps and learning materials to help you pass real exam with less time and money. Our valid NSE6_FSW-7.2 top questions are written by our IT experts who are specialized in NSE6_FSW-7.2 Study Guide for many years and check the updating of NSE6_FSW-7.2 vce files everyday to make sure the best preparation material for you.

Fortinet NSE 6 - FortiSwitch 7.2 Sample Questions (Q27-Q32):

NEW QUESTION # 27

Refer to the exhibits

Topology

VLAN

Edit VLAN

ID: 10

Description:

Private VLAN: ☒ Disabled ☐ Enabled

IGMP Snooping: ☐ Enable

DHCP Snooping: ☐ Enable

Members by MAC Address

Description	MAC Address	Manage
+ Add		

Members by IP Address

Description	IP/Netmask	Manage
+ Add		

Traffic arriving on port2 on FortiSwitch is tagged with VLAN ID 10 and destined for PC1 connected on port1. PC1 expects to receive traffic untagged from port1 on FortiSwitch.

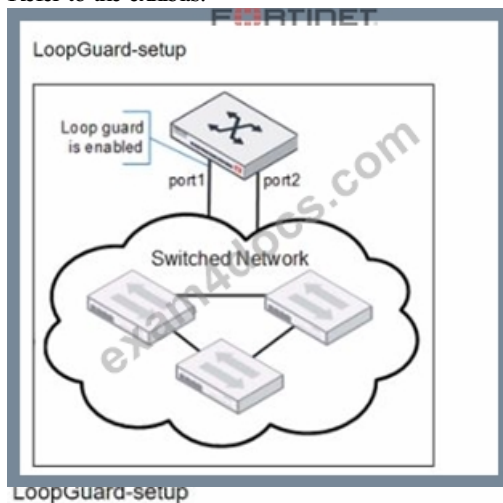

Which two configurations can you perform on FortiSwitch to ensure PC1 receives untagged traffic on port1? (Choose two.)

- A. Remove VLAN 10 from the allowed VLANs and add it to untagged VLANs on port1.
- B. Add the MAC address of PC1 as a member of VLAN 10.
- C. Add VLAN ID 10 as a member of the untagged VLANs on port1.
- D. Enable Private VLAN on VLAN 10 and add VLAN 20 as an isolated VLAN.

Answer: B,C

NEW QUESTION # 28

Refer to the exhibits.

LoopGuard-setup

```
# diagnose switch-controller switch-info loop-guard S108EF4N17000029
```

S108EF4N17000029:

Portname	State	Status	Timeout (m)	MAC-Move	Count	Last-Event
port1	enabled	Triggered	2	0	1	2021-02-19 15:50:35
port2	disabled	-	-	-	-	-
port3	disabled	-	-	-	-	-
port4	disabled	-	-	-	-	-
port5	disabled	-	-	-	-	-
port6	disabled	-	-	-	-	-
port9	disabled	-	-	-	-	-
port10	disabled	-	-	-	-	-
8EF4N17000030-0	disabled	-	-	-	-	-
_FlInK1_MLAG0_	disabled	-	-	-	-	-

Port1 and port2 are the only ports configured with the same native VLAN 10.

What are two reasons that can trigger port1 to shut down? (Choose two.)

- A. port1 was shut down by loop guard protection.
- B. Loop guard frame sourced from port 1 was received on port 1.
- C. An endpoint sent a BPDU on port1 that it received from another interface.
- D. STP triggered a loop and applied loop guard protection on port1.

Answer: A,D

Explanation:

When loop guard is enabled on port1 and port2 configured with the same native VLAN (VLAN 10), there are specific scenarios under which port1 can be shut down due to loop guard operation:

A . port1 was shut down by loop guard protection. Loop guard is a specific feature used in network environments to prevent alternative or redundant loops. When loop guard is active, it can shut down a port if it stops receiving BPDU (Bridge Protocol Data Units) on a port that is expected to receive them, assuming a loop or link failure and putting the port into an inconsistent state to prevent potential loops.

B . STP triggered a loop and applied loop guard protection on port1. If the Spanning Tree Protocol (STP) detects a loop or loss of BPDU transmissions while loop guard is enabled, it will proactively shut down the port to prevent network instability or a broadcast storm. This is an essential function of loop guard within the context of STP, providing additional protection against topology changes that could introduce loops.

Reference:

Additional details about loop guard functionality and STP interaction can be found in the FortiSwitch administration guides, accessible via Fortinet Documentation.

NEW QUESTION # 29

What feature can network administrators use to segment network operations and the administration of managed FortiSwitch devices on FortiGate?

- A. FortiLink split interface
- B. Multi-chassis link aggregation trunk
- C. FortiGate multi-tenancy
- D. FortiGate clustering protocol

Answer: C

NEW QUESTION # 30

Which two statements about 802.1X authentication on FortiSwitch ports are true? (Choose two.)

- A. All devices connecting to FortiSwitch must support 802.1X authentication.
- B. All hosts behind an authenticated port are allowed access after a successful authentication.
- C. A local user database must be used to authenticate devices using the 802.1X authentication protocol.
- D. A security policy is used to apply 802.1 authentication on a port.

Answer: A,B

Explanation:

All hosts behind an authenticated port are allowed access after a successful authentication (A): Once a device on a port successfully authenticates using 802.1X, all other devices connected behind that port also gain network access. This is typical in scenarios where a switch is behind an authenticated port and not each device individually authenticates.

All devices connecting to FortiSwitch must support 802.1X authentication (D): For a network secured with 802.1X, all devices attempting to connect through the FortiSwitch must support and participate in 802.1X authentication to gain access. This ensures that all devices on the network are authenticated before they are allowed to communicate on the network.

NEW QUESTION # 31

Which statement about using MAC, IP, and protocol-based VLANs on FortiSwitch is true?

- A. It provides benefits that can be obtained when using 802.1X authentication.
- B. FortiSwitch uses only the Ethernet type to assign traffic to VLANs.
- C. Endpoints are required to use the same FortiSwitch port to remain members of the VLAN.
- D. It is a scalable and secure solution in comparison to other Layer 2 security measures.

Answer: A

Explanation:

It provides benefits that can be obtained when using 802.1X authentication (C): MAC, IP, and protocol-based VLANs on FortiSwitch are beneficial in network environments where additional granularity is needed in traffic segmentation and security, similar to what can be achieved through 802.1X authentication. These VLAN types allow for dynamic assignment of ports to VLANs based on the characteristics of the incoming traffic, enhancing both security and network efficiency.

NEW QUESTION # 32

.....

With all types of NSE6_FSW-7.2 test guide selling in the market, lots of people might be confused about which one to choose. Many people can't tell what kind of NSE6_FSW-7.2 study dumps and software are the most suitable for them. Our company can guarantee that our NSE6_FSW-7.2 actual questions are the most reliable. Having gone through about 10 years' development, we still pay effort to develop high quality NSE6_FSW-7.2 study dumps and be patient with all of our customers, therefore you can trust us completely. In addition, you may wonder if our NSE6_FSW-7.2 Study Dumps become outdated. We here tell you that there is no need to worry about. Our NSE6_FSW-7.2 actual questions are updated in a high speed. Since the date you pay successfully, you will enjoy the NSE6_FSW-7.2 test guide freely for one year, which can save your time and money. We will send you the latest NSE6_FSW-7.2 study dumps through your email, so please check your email then.
