NSE6_FSW-7.2

complete the authorization. This is a part of the FortiLink protocol, where FortiGate communicates with the connected FortiSwitch to establish management and control. This frame initiates the configuration and management process, allowing FortiGate to effectively control the switch. D. FortiLink authorization sets the FortiSwitch management mode to FortiLink. Once authorized, the management mode of FortiSwitch is set to FortiLink, indicating that it is being managed via a FortiLink connection from a FortiGate appliance. This changes the operational mode of the switch to be under the control of the FortiGate for centralized management and policy application. References: Further details on the FortiLink setup and authorization process can be accessed through the FortiGate configuration guides available on the Fortinet Documentation site.

The profile shown in the exhibit is assigned to a group of managed FortiSwitch ports, and these ports are connected to endpoints which are powered by PoE. Which configuration action can you perform on the LLDP profile to cause these endpoints to exchange PoE information and negotiate power with the managed FortiSwitch?

Option A : Create new a LLDP-MED application type to define the PoE parameters.

Option B : Assign a new LLDP profile to handle different LLDP-MED TLVs.

With the rapid development of the world economy, it has been universally accepted that a growing number of people have longed to become the social elite. The NSE6_FSW-7.2 latest study guide materials will be a shortcut for a lot of people who desire to be the social elite. If you try your best to prepare for the NSE6_FSW-7.2 Exam and get the related certification in a short time, it will be easier for you to receive the attention from many leaders of the big company like us, and it also will be very easy for many people to get a decent job in the labor market with the help of our NSE6_FSW-7.2 learning guide.

The industry experts hired by NSE6_FSW-7.2 exam materials are those who have been engaged in the research of NSE6_FSW-7.2 exam for many years. They have a keen sense of smell in the direction of the exam. Therefore, they can make accurate

predictions on the exam questions. Therefore, our study materials specifically introduce a mock examination function. With NSE6_FSW-7.2 exam materials, you can not only feel the real exam environment, but also experience the difficulty of the exam. You can test your true level through simulated exams. At the same time, after repeated practice of NSE6_FSW-7.2 study braindumps, I believe that you will feel familiar with these questions during the exam and you will feel that taking the exam is as easy as doing exercises in peace. According to our statistics on the data so far, the passing rate of the students who have purchased one exam exceeds 99%, which is enough to see that NSE6_FSW-7.2 test guide is a high-quality product that can help you to realize your dream.

To make sure your possibility of passing the certificate, we hired first-rank experts to make our NSE6_FSW-7.2 practice materials. So the proficiency of our team is unquestionable. They help you to review and stay on track without wasting your precious time on useless things. By handpicking what the NSE6_FSW-7.2 practice exam usually tested in exam and compile them into our NSE6_FSW-7.2 practice materials, they win wide acceptance with first-rank praise. To go with the changing neighborhood, we need to improve our efficiency of solving problems as well as the new contents accordingly, so all points are highly fresh about in compliance with the syllabus of the exam.

Fortinet NSE 6 - FortiSwitch 7.2 Sample Questions (Q30-Q35):

NEW QUESTION # 30

Exhibit.

```
config switch phy-mode
set port-configuration disable-port54
set port53-phy-mode 4x10G
```

What conditions does a FortiSwitch need to have to successfully configure the options shown in the exhibit above? (Choose two.)

- A. The port full speed prior the split was 100G SFP+
- B. The split port can be assigned to native VLAN
- C. The FortiSwitch model is equipped with a maximum of 54 interfaces.
- D. The CLI commands are enabling a split port into four 10Gbps interfaces.

Answer: A,D

Explanation:

Regarding the configuration of a FortiSwitch to split a port into multiple smaller interfaces:

The CLI commands are enabling a split port into four 10Gbps interfaces (Option B): The command shown in the exhibit is typically used to configure a high-speed port (like a 40Gbps or 100Gbps interface) to be divided into smaller, independent 10Gbps interfaces. This feature allows more flexible use of the switch's physical resources.

The port full speed prior to the split was 100G SFP+ (Option C): Given the context of splitting the port into multiple 10Gbps interfaces, the original port configuration likely supported a high-speed transceiver such as 100G SFP+. This would make it technically feasible to divide the interface into multiple 10Gbps channels, enhancing connectivity options without requiring additional physical interfaces.

These configurations and capabilities are typical in modern network setups, especially in environments requiring high density and flexibility in connectivity, allowing network administrators to optimize physical infrastructure efficiently.

NEW QUESTION # 31

What type of multimode transceiver can be used to split a 40G port?

- A. QSFP+ transceiver
- B. SFP+ transceiver

- C. SFP transceiver
- D. QSFP transceiver

Answer: A

Explanation:

QSFP+ transceiver (A): The QSFP+ (Quad Small Form-factor Pluggable Plus) transceiver is designed to handle 40G data rates and can be used to split a 40G port into multiple 10G connections. This type of transceiver supports such configurations, making it suitable for high-density applications where multiple 10G connections are derived from a single 40G port, thereby maximizing the utilization of the port and the fiber infrastructure.

NEW QUESTION # 32

Which two statements about the FortiLink authorization process are true? (Choose two.)

- A. FortiLink authorization sets the FortiSwitch management mode to FortiLink.
- B. The administrator must manually pre-authorize FortiGate on FortiSwitch by adding the FortiGate serial number.
- C. A FortiLink frame is sent by FortiGate to FortiSwitch to complete the authorization.
- D. FortiSwitch requires a reboot to complete the authorization process.

Answer: A,C

NEW QUESTION # 33

Refer to the diagnostic output:

```
# diagnose switch-controller switch-info mac-table
Vdom: root
S224EPTF19005928 0 :
MAC address Interface vlan
=====
04:d5:90:39:73:3d internal 4092
04:d5:90:3e:e2:88 port1 4089
00:50:56:96:e3:fc GVM1V0000141680 4089
04:d5:90:39:73:3d internal 4094
00:50:56:96:e3:fc GVM1V0000141680 4094
```

Two entries in the exhibit show that the same MAC address has been used in two different VLANs. Which MAC address is shown in the above output?

- A. It is a MAC address of FortiLink interface on FortiGate.
- B. It is a MAC address of FortiGate in HA configuration.
- C. It is a MAC address of an upstream FortiSwitch.
- D. It is a MAC address of a switch that accepts multiple VLANs.

Answer: D

Explanation:

The MAC address "00:50:56:96:e3:fc" appearing in two different VLANs (4089 and 4094) in the diagnostic output indicates it is a MAC address associated with a device that supports traffic from multiple VLANs. Such a behavior is typical of network infrastructure devices like switches or routers, which are configured to allow traffic from various VLANs to pass through a single physical or logical interface. This is essential in network designs that utilize VLANs to segregate network traffic for different departments or use cases while using the same physical infrastructure.

Reference:

For more detailed information on MAC table diagnostics and VLAN configurations in FortiGate devices, refer to the official Fortinet documentation: Fortinet Product Documentation.

NEW QUESTION # 34

How are the 'by VLAN redirect MAC address quarantine' mode and the 'by redirect MAC address quarantine' mode on FortiGate similar?

- A. Both modes block intra-VLAN traffic by FortiGate automatically.
- B. Both modes add quarantined device MAC addresses to the blocked firewall address group.
- C. Both modes require firewall policies to block inter-VLAN traffic.
- **D. Both modes move quarantined devices to the quarantine VLAN.**

Answer: D

Explanation:

The 'by VLAN redirect MAC address quarantine' mode and the 'by redirect MAC address quarantine' mode on FortiGate share specific similarities:

Quarantine VLAN Assignment (A):

Common Feature: Both modes utilize a designated quarantine VLAN to isolate quarantined devices. This helps in mitigating the risk of spreading potential security threats within the network.

Operational Impact: Moving devices to a specific quarantine VLAN restricts their network access, effectively isolating them until further action or remediation is taken.

NEW QUESTION # 35
