Do you want to get a better job or a higher income? If the answer is yes, then you should buy our NSE7_EFW-7.2 exam questions for our NSE7_EFW-7.2 study materials can help you get what you want. Go against the water and retreat if you fail to enter. The pressure of competition is so great now. If you are not working hard, you will lose a lot of opportunities! There is no time, quickly purchase NSE7_EFW-7.2 Study Materials, pass the exam! Come on!

We are pleased to inform you that we have engaged in this business for over ten years with our Fortinet NSE 7 - Enterprise Firewall 7.2 NSE7_EFW-7.2 exam questions. Because of our experience, we are well qualified to take care of your worried about the NSE7_EFW-7.2 Preparation exam and smooth your process with successful passing results.

100% Pass Quiz NSE7_EFW-7.2 - Fortinet NSE 7 - Enterprise Firewall 7.2

Fantastic New Braindumps Sheet

In this highly competitive modern society, everyone needs to improve their knowledge level or ability through various methods so as to obtain a higher social status. Under this circumstance passing NSE7_EFW-7.2 exam becomes a necessary way to improve

oneself. And you are lucky to find us for we are the most popular vendor in this career and have a strong strength on providing the best NSE7_EFW-7.2 Study Materials. And the price of our NSE7_EFW-7.2 practice engine is quite reasonable.

Fortinet NSE 7 - Enterprise Firewall 7.2 Sample Questions (Q59-Q64):

NEW QUESTION # 59

Refer to the exhibit, which shows a routing table.

Network	Gateway IP	Interfaces	Distance	Type
0.0.0.0/0	10.1.0.254	port1	10	Static
10.1.0.0/24	0.0.0.0	port1	0	Connected
10.1.4.0/24	10.1.0.100	port1	110	OSPF
10.1.10.0/24	0.0.0.0	port8	0	Connected
172.16.100.0/24	0.0.0.0	port8	0	Connected

What two options can you configure in OSPF to block the advertisement of the 10.1.10.0 prefix? (Choose two.)

- A. Configure a distribute-list-out
- B. Remove the 10.1.10.0 prefix from the OSPF network
- C. Disable Redistribute Connected
- D. Configure a route-map out

Answer: B,C

Explanation:

On OSFP distribute-list and route-maps exist only incoming, and because you want to exclude a connected network from redistribution you can not use the option "redistribute connected", so you have to specify the networks manually.

NEW QUESTION # 60

Exhibit.

```
# diagnose webfilter fortiguard cache dump

Saving to file [/tmp/urcCache.txt]
Cache Contents:
-----
Cache Mode:  TTL
Cache DB Ver: 23.6106

Domain  |IP      DB Ver  T URL
34000000|34000000 23.6106 P Http://training.fortinet.com/
25000000|25000000 23.6106 F Https://twitter.com/...

# get webfilter categories
--
g07 General Interest - Business:
  31 Finance and Banking
...
  51 Government and Legal Organizations
  52 Information Technology
```

Refer to the exhibit, which shows the output from the webfilter fortiguard cache dump and webfilter categories commands. Using the output, how can an administrator determine the category of the training.fortinet.com website?

- A. The administrator must convert the first three digits of the IP hex value to binary
- B. The administrator must add both the Pima in and Iphex values of 34 to get the category number
- C. The administrator can look up the hex value of 34 in the second command output.
- D. The administrator must convert the first two digits of the Domain hex value to a decimal value

Answer: C

Explanation:

Option B is correct because the administrator can determine the category of the training.fortinet.com website by looking up the hex value of 34 in the second command output. This is because the first command output shows that the domain and the IP of the website are both in category (Hex) 34, which corresponds to Information Technology in the second command output1.

Option A is incorrect because the administrator does not need to convert the first three digits of the IP hex value to binary. The IP

hex value is already in the same format as the category hex value, so the administrator can simply compare them without any conversion².

Option C is incorrect because the administrator does not need to add both the Pima in and Iphex values of 34 to get the category number. The Pima in and Iphex values are not related to the category number, but to the cache TTL and the database version respectively³.

Option D is incorrect because the administrator does not need to convert the first two digits of the Domain hex value to a decimal value. The Domain hex value is already in the same format as the category hex value, so the administrator can simply compare them without any conversion². Reference: =

NEW QUESTION # 61

Which statement is true regarding the Bidirectional Forwarding Detection protocol in BGP?

- A. BFD is used to detect one way device failure
- B. BFD is enabled under config router bfd configuration
- C. BFD is only supported when two FortiGate devices are directly connected on the same network
- D. BFD is using BGP keepalive messages to check the status of BGP peer

Answer: A

NEW QUESTION # 62

Refer to the exhibit, which shows the output of a BGP summary.

```
FGT # get router info bgp summary
BGP router identifier 0.0.0.117, local AS number 65117
BGP table version is 104
3 BGP AS-PATH entries
0 BGP community entries
```

Neighbor	V	AS	MsgRcvd	MsgSent	TblVer	InQ	OutQ	Up/Down	State/PfxRcd
10.125.0.60	4	65060	1756	103	0	0	03:02:49	1	
10.127.0.75	4	65075	2206	2250	102	0	02:45:55	1	
100.64.3.1	4	65501	101	115	0	0	never	Active	

Total number of neighbors 3

What two conclusions can you draw from this BGP summary? (Choose two.)

- A. External BGP (EBGP) exchanges routing information.
- B. The router 100.64.3.1 has the parameter bfd set to enable.
- C. The neighbors displayed are linked to a local router with the neighbor-range set to a value of 4.
- D. The BGP session with peer 10.127.0.75 is established.

Answer: A,D

Explanation:

The output of the BGP (Border Gateway Protocol) summary shows details about the BGP neighbors of a router, their Autonomous System (AS) numbers, the state of the BGP session, and other metrics like messages received and sent.

From the BGP summary provided:

A). External BGP (EBGP) exchanges routing information.

This conclusion can be inferred because the AS numbers for the neighbors are different from the local AS number (65117), which suggests that these are external connections.

B). The BGP session with peer 10.127.0.75 is established. This is indicated by the state/prefix received column showing a numeric value (1), which typically means that the session is established and a number of prefixes has been received.

C). The router 100.64.3.1 has the parameter bfd set to enable. This cannot be concluded directly from the summary without additional context or commands specifically showing BFD (Bidirectional Forwarding Detection) configuration.

D). The neighbors displayed are linked to a local router with the neighbor-range set to a value of 4. The neighbor-range concept does not apply here; the value 4 in the 'V' column stands for the BGP version number, which is typically 4.

NEW QUESTION # 63

Winch two statements about ADVPN are true? (Choose two)

- A. It supports NAI for on-demand tunnels
- B. auto-discovery receiver must be set to enable on the Spokes.
- C. Spoke to-spoke traffic never goes through the hub
- D. Routing is configured by enabling add-advpn-route

Answer: A,B

Explanation:

ADVPN (Auto Discovery VPN) is a feature that allows to dynamically establish direct tunnels (called shortcuts) between the spokes of a traditional Hub and Spoke architecture. The auto-discovery receiver must be set to enable on the spokes to allow them to receive NHRP messages from the hub and other spokes. NHRP (Next Hop Resolution Protocol) is used for on-demand tunnels, which are established when there is traffic between spokes. Routing is configured by enabling add-nhrp-route, not add-advpn-route. Reference := ADVPN | FortiGate / FortiOS 7.2.0 | Fortinet Document Library, Technical Tip: Fortinet Auto Discovery VPN (ADVPN)
