100% Pass 2025 Fortinet - NSE7_LED-7.0 Latest Test Report

Are you trying to pass the NSE7_LED-7.0 exam to get the longing NSE7_LED-7.0 certification? As we know, there are a lot of the advantages of the certification, such as higher salaries, better job positions and so on. Perhaps at this moment, you need the help of our NSE7_LED-7.0 Study Materials. As our company's flagship product, it has successfully helped countless candidates around the world to obtain the coveted NSE7_LED-7.0 certification.

Fortinet NSE7_LED-7.0 certification exam covers a wide range of topics related to LAN edge security, such as secure network design, secure protocols, secure access, secure authentication, secure communication, and more. NSE7_LED-7.0 exam is designed to test the skills and knowledge of the candidates in these areas, and it is based on real-world scenarios that network security professionals might encounter in their day-to-day work.

Fortinet NSE7_LED-7.0 is an examination offered by Fortinet that validates the knowledge and skills of professionals who work with Fortinet NSE 7 - LAN Edge 7.0 solutions. It is designed to test the understanding of concepts, principles, and practices related to Fortinet NSE 7 - LAN Edge 7.0.

Fortinet NSE 7 - LAN Edge 7.0 Sample Questions (Q59-Q64):

NEW QUESTION # 59

You are setting up an SSID (VAP) to perform RADIUS-authenticated dynamic VLAN allocation Which three RADIUS attributes must be supplied by the RADIUS server to enable successful VLAN allocation" (Choose three.)

- A. Tunnel-Pvt-Group-ID

- B. Tunnel-Type
- C. Tunnel-Preference
- D. Tunnel-Medium-Type
- E. Tunnel-Private-Group-ID

Answer: A,B,D

NEW QUESTION # 60

Refer to the exhibit.

Examine the FortiManager configuration and FortiGate CLI output shown in the exhibit. An administrator is testing the NAC feature. The test device is connected to a managed FortiSwitch device {S224EPTF19"53C7) on port2.

After applying the NAC policy on port2 and generating traffic on the test device, the test device is not matching the NAC policy; therefore, the test device remains in the onboarding VLAN. Based on the information shown in the exhibit, which two scenarios are likely to cause this issue? (Choose two.)

- A. Device detection is not enabled on VLAN 4089
- B. Management communication between FortiGate and FortiSwitch is down
- C. The MAC address configured on the NAC policy is incorrect
- D. The device operating system detected by FortiGate is not Linux

Answer: B,C

Explanation:

Explanation

According to the FortiManager configuration, the NAC policy is set to match devices with the MAC address of 00:0c:29:6a:2b:3c and the operating system of Linux. However, according to the FortiGate CLI output, the test device has a different MAC address of 00:0c:29:6a:2b:3d. Therefore, option B is true. Option A is also true because the FortiSwitch device status is shown as down, which means that the management communication between FortiGate and FortiSwitch is not working properly. This could prevent the NAC policy from being applied correctly. Option C is false because the device operating system detected by FortiGate is Linux, which matches the NAC policy. Option D is false because device detection is enabled on VLAN 4089, as shown by the command "config switch-controller vlan".

NEW QUESTION # 61

An administrator has configured an SSID in bridge mode for corporate employees. All APs are online and provisioned using default AP profiles. Employees are unable to locate the SSID to connect.

Which two configurations can the administrator verify? (Choose two.)

- A. Verify that the SSID is manually applied on AP profiles for both 2.4 GHz and 5 GHz radios
- B. Verify that the SSID to an AP group that should be broadcasting the SSID is applied
- C. Verify that the Block Intra-SSID Traffic (intra-vap-privacy) option in the SSID configuration is disabled

- D. Verify that the broadcast SSID option is enabled in the SSID configuration

Answer: A,D

Explanation:

<https://community.fortinet.com/t5/FortiGate/Technical-Tip-How-to-enable-and-disable-broadcast-of-SSID/ta-p/191840>

NEW QUESTION # 62

Which two pieces of information can the diagnose test authserver ldap command provide? (Choose two.)

- A. It displays whether the admin bind user credentials are correct
- B. It displays the LDAP codes returned by the LDAP server
- C. It displays the LDAP groups found for the user
- D. It displays whether the user credentials are correct

Answer: B,D

Explanation:

Explanation

According to the FortiGate CLI Reference Guide, "The diagnose test authserver ldap command tests LDAP authentication with a specific LDAP server. The command displays whether the user credentials are correct and whether the user belongs to any groups that match a firewall policy. The command also displays the LDAP codes returned by the LDAP server." Therefore, options B and C are true because they describe the information that the diagnose test authserver ldap command can provide. Option A is false because the command does not display whether the admin bind user credentials are correct, but rather whether the user credentials are correct. Option D is false because the command does not display the LDAP groups found for the user, but rather whether the user belongs to any groups that match a firewall policy.

NEW QUESTION # 63

Which two statements about the MAC-based 802.1X security mode available on FortiSwitch are true? (Choose two.)

- A. It cannot be used in conjunction with MAC authentication bypass
- B. FortiSwitch authenticates each device connected to the port
- C. FortiSwitch authenticates a single device and opens the port to other devices connected to the port
- D. FortiSwitch can grant different access levels to each device connected to the port

Answer: B,D

Explanation:

MAC-based 802.1X security mode allows you to authenticate each device connected to a port using its MAC address as the username and password. Therefore, Option B is true because it describes the MAC-based 802.1X security mode available on FortiSwitch. Option D is also true because FortiSwitch can grant different access levels to each device connected to the port based on the user group and security policy assigned to them.

NEW QUESTION # 64

.....

It can be difficult to prepare for the Fortinet NSE7_LED-7.0 exam successfully, but with actual and updated Fortinet NSE 7 - LAN Edge 7.0 (NSE7_LED-7.0) exam questions, it can be much simpler. The difference between successful and failed NSE7_LED-7.0 Certification Exam attempts can be determined by studying with real NSE7_LED-7.0 exam questions.
