Which statement explains the output shown in the exhibit?

- A. FortiGate must re-evaluate the session due to routing change.
- B. FortiGate performed standard FIB routing on the session.
- C. FortiGate used 192.2.0.1 as the gateway for the original direction of the traffic.
- D. FortiGate will not re-evaluate the session following a firewall policy change.

Answer: A

Explanation:

The snat-route-change option is enabled by default. This option enables FortiGate to re-evaluate the routing table and select a new egress interface if the next hop IP address changes. This option only applies to sessions in the dirty state. Sessions in the log state are not affected by routing changes.
