

NSK300 Exam Labs & NSK300 Positive Feedback

NSK300

Option D : The user will be alerted and a single incident will be generated referencing the DLP-PI profile.

Correct Answer: C

Explanation/Reference:

In the given scenario, a user is attempting to upload a file containing sensitive PII and PCI data to Microsoft OneDrive. The Netskope Security Cloud provides real-time data and threat protection when accessing cloud services, websites, and private apps from anywhere, on any device. Based on the exhibit provided, different DLP (Data Loss Prevention) profiles are triggered - DLP-SourceCode, DLP-PCI, and DLP-PII. Each of these profiles has specific actions associated with them; for instance, an alert is generated for Source Code while blocking actions are initiated for PCI and PII data. Since multiple DLP profiles are triggered due to the sensitive nature of the content in the file being uploaded, separate incidents will be generated for each matching profile ensuring comprehensive security coverage and incident reporting. QUESTION: 4

You are implementing a solution to deploy Netskope for machine traffic in an AWS account across multiple VPCs. You want to deploy the least amount of tunnels while providing connectivity for all VPCs. How would you accomplish this task?

Option A : Use IPsec tunnels from the AWS Virtual Private Gateway.

Option B : Use GRE tunnels from the AWS Transit Gateway.

Option C : Use GRE tunnels from the AWS Virtual Private Gateway.

Option D : Use IPsec tunnels from the AWS Transit Gateway.

Correct Answer: D

Explanation/Reference:

The best approach to deploy Netskope for machine traffic across multiple VPCs in an AWS account with the least amount of

If you have the NSK300 certification, it will be very easy for you to achieve your dream. But it is not an easy thing for many candidates to pass the NSK300 exam. By chance, our company can help you solve the problem and get your certification, because our company has compiled the NSK300 question torrent that not only have high quality but also have high pass rate. We believe that our NSK300 exam questions will help you get the certification in the shortest. So hurry to buy our NSK300 exam torrent, you will like our products.

Netskope NSK300 Exam Syllabus Topics:

Topic	Details
-------	---------

Topic 1	• Netskope Platform Monitoring and Troubleshooting: It focuses on monitoring Netskope's health, identifying possible problems, and successfully resolving them.
Topic 2	• Advanced Threat Protection: This topic explores how Netskope detects and mitigates sophisticated threats, such as malware and cloud data breaches.
Topic 3	• Netskope Security Cloud Platform: It provides a thorough grasp of the architecture, deployment choices, and essential features of Netskope.
Topic 4	• Cloud Threat Detection and Response: This article describes how to use Netskope in a cloud environment for threat hunting, investigation, and incident response.
Topic 5	• Security Policy Management: One of the main competencies evaluated in this topic is the creation and management of granular security rules for cloud resources and applications.

Netskope - NSK300 - Useful Netskope Certified Cloud Security Architect Exam Labs

How you can gain the NSK300 certification with ease in the least time? The answer is our NSK300 study materials for we have engaged in this field for over ten years and we have become the professional standard over all the exam materials. You can free download the demos which are part of our NSK300 Exam Braindumps, you will find that how good they are for our professionals devote of themselves on compiling and updating the most accurate content of our NSK300 exam questions.

Netskope Certified Cloud Security Architect Sample Questions (Q36-Q41):

NEW QUESTION # 36

You are building an architecture plan to roll out Netskope for on-premises devices. You determine that tunnels are the best way to achieve this task due to a lack of support for explicit proxy in some instances and IPsec is the right type of tunnel to achieve the desired security and steering.

What are three valid elements that you must consider when using IPsec tunnels in this scenario? (Choose three.)

- A. the impact of threat scanning performance
- B. bandwidth considerations
- C. the categories to be blocked
- D. cipher support on tunnel-initiating devices
- E. Netskope Client behavior when on-premises

Answer: B,D,E

NEW QUESTION # 37

You have users connecting to Netskope from around the world. You need a way for your NOC to quickly view the status of the tunnels and easily visualize where the tunnels are located. Which Netskope monitoring tool would you use in this scenario?

- A. Network Events in Skope IT
- B. Web Usage Summary in Advanced Analytics
- C. Alerts in Skope IT
- D. Network Steering in Digital Experience Management

Answer: D

Explanation:

Network Steering in Digital Experience Management is the appropriate Netskope monitoring tool for this scenario. It allows the Network Operations Center (NOC) to quickly view the status of the tunnels and provides an easy way to visualize the locations of the tunnels. This tool is designed to give a clear overview of network health and performance, which is essential for managing global

connectivity and ensuring the reliability of the service.

NEW QUESTION # 38

You are implementing a solution to deploy Netskope for machine traffic in an AWS account across multiple VPCs. You want to deploy the least amount of tunnels while providing connectivity for all VPCs.

How would you accomplish this task?

- A. Use IPsec tunnels from the AWS Virtual Private Gateway.
- B. Use GRE tunnels from the AWS Transit Gateway.
- C. Use GRE tunnels from the AWS Virtual Private Gateway
- **D. Use IPsec tunnels from the AWS Transit Gateway.**

Answer: D

Explanation:

The best approach to deploy Netskope for machine traffic across multiple VPCs in an AWS account with the least amount of tunnels while providing connectivity for all VPCs is to use IPsec tunnels from the AWS Transit Gateway. This method allows you to use the same Site-to-Site VPN connection to Netskope for multiple VPCs, thus minimizing the number of tunnels required¹². The AWS Transit Gateway acts as a network transit hub, enabling you to connect your VPCs and on-premises networks through a central point of management and control. Using IPsec tunnels with the AWS Transit Gateway ensures that all VPCs connected to it utilize the same IPsec tunnel between the transit gateway and Netskope POP1.

NEW QUESTION # 39

You are the network architect for a company using Netskope Private Access. Multiple users are reporting that they are unable to access an application using Netskope Private Access that was working previously. You have verified that the Real-time Protection policy allows access to the application, private applications are steered for the users, and the application is reachable from internal machines. You must verify that the application is reachable through Netskope Publisher. In this scenario, which two tools in the Netskope UI would you use to accomplish this task? (Choose two.)

- **A. Reachability Via Publisher in the App Definitions page**
- B. Applications in Skope IT
- **C. Troubleshooter tool in the App Definitions page**
- D. Clear Private App Auth under Users in Skope IT

Answer: A,C

Explanation:

In the scenario where users are unable to access an application through Netskope Private Access, and after verifying that the Real-time Protection policy allows access, the application is steered for the users, and it is reachable from internal machines, the next step is to verify the application's reachability through the Netskope Publisher. The two tools in the Netskope UI that would be used to accomplish this task are:

A . Reachability Via Publisher in the App Definitions page - This tool allows you to check if the application is reachable through the configured Publishers. It is essential to ensure that the application's connectivity is intact and that there are no issues with the Publishers themselves.

B . Troubleshooter tool in the App Definitions page - The Troubleshooter tool can help diagnose and resolve issues related to application reachability. It provides insights into potential problems and offers guidance on how to fix them.

These tools are designed to assist in troubleshooting and ensuring that applications are accessible through Netskope Private Access.

NEW QUESTION # 40

You have an NG-SWG customer that currently steers all Web traffic to Netskope using the Netskope Client.

They have identified one new native application on Windows devices that is a certificate-pinned application.

Users are not able to access the application due to certificate pinning. The customer wants to configure the Netskope Client so that the traffic from the application is steered to Netskope and the application works as expected.

Which two methods would satisfy the requirements? (Choose two.)

- **A. Tunnel traffic to Netskope and bypass traffic inspection at the Netskope proxy.**
- B. Bypass traffic using the bypass action in the Real-time Protection policy.

- Answer: A,D**
