

Nutanix Certified Services Core Infrastructure Professional Free Valid Torrent & NCS-Core Actual Practice Pdf & Nutanix Certified Services Core Infrastructure Professional Exam Training Pdf

P.S. Free 2025 Nutanix NCS-Core dumps are available on Google Drive shared by PracticeDump: https://drive.google.com/open?id=16zmlAmqTOwnOb_9jCgSoeBauv23rjvh

We put high emphasis on the protection of our customers' personal data and fight against criminal action on our NCS-Core exam questions. Our NCS-Core preparation exam is consisted of a team of professional experts and technical staff, which means that you can trust our security system with whole-heart. As for your concern about the network virus invasion, NCS-Core Learning Materials guarantee that our purchasing channel is absolutely worthy of your trust.

Each of the PracticeDump Nutanix NCS-Core exam dumps formats excels in its way and carries actual Nutanix Certified Services Core Infrastructure Professional (NCS-Core) exam questions for optimal preparation. All of these Nutanix Certified Services Core Infrastructure Professional (NCS-Core) practice question formats are easy to use and extremely convenient such that even newbies find them simple.

Free PDF Quiz 2025 Nutanix NCS-Core Useful Pass Test Guide

With the excellent NCS-Core exam braindumps, our company provides you the opportunity to materialize your ambitions with the excellent results. Using our NCS-Core preparation questions will enable you to cover up the entire syllabus within as minimum as 20 to 30 hours only. And we can claim that, as long as you focus on the NCS-Core training engine, you will pass for sure. And the benefit from our NCS-Core learning guide is enormous for your career enhancement.

Nutanix Certified Services Core Infrastructure Professional Sample Questions (Q298-Q303):

NEW QUESTION # 298

A consultant has been tasked with increasing security on a Nutanix cluster by disabling password authentication when accessing the CVM and AHV hosts and instead moving to key-based SSH.

What is the easiest way for the consultant to meet these requirements?

- A. Enable Cluster Lockdown and provide an RSA key.
- B. Restrict access with User Management in Prism.
- C. Enable STIGs via command line on SSH to a CVM.
- D. Configure LDAP authentication through a secure server.

Answer: A

Explanation:

The most straightforward approach for increasing security by disabling password authentication and moving to key-based SSH on a Nutanix cluster involves:

* C. Enable Cluster Lockdown and provide an RSA key: Cluster Lockdown mode restricts management access to the cluster, ensuring that only key-based SSH authentication is used to access the CVM and AHV hosts, enhancing security by eliminating the use of passwords.

References:

* Nutanix Bible (<https://www.nutanixbible.com>), particularly sections discussing secure access and authentication methods.

* Nutanix University: NCS-Core 6.8 Training (<https://university.nutanix.com>), where security features like Cluster Lockdown are covered.

NEW QUESTION # 299

An administrator is currently using both 10g uplink with LACP and balance-tcp. A single VM should not be allowed to use more than a single 10G uplink, and both uplinks should be utilized.

Which two command should be used to configure the bond? (choose two)

- A. `Ovs-vsctl set port br0-up other_config:bond-rebalance-interval=30000`
- B. `Ovs-vsctl set port br0-up bond_mode=balance-slb`
- C. `Ovs-vsctl set port br0-up bond_mode=active-backup`
- D. `Ovs-vsctl set port br0-up bond_mode=balance-tcp`

Answer: A,B

Explanation:

For a configuration where a single VM should not exceed the bandwidth of a single 10G uplink and both uplinks need to be utilized, the correct bonding mode is balance-slb (Source Load Balancing). This mode allows both uplinks to be utilized while ensuring that a single VM will not exceed the capacity of one uplink, as traffic from each VM or "source" is assigned to one of the links in the bond.

The other_config:

`bond-rebalance-interval=30000` command is used to set the interval at which the bonding driver will rebalance the assignment of sources to links in the bond. This helps in maintaining optimal distribution of load across the links as network conditions change.

NEW QUESTION # 300

After reviewing the questionnaire provided by a customer, the consultant is completing the Foundation Configuration on the Nutanix website. According to the customer requirements, the cluster should be prepared off site in a safe room, and moved afterwards to the datacenter.

Which configuration should the consultant implement on the Foundation VM?

4. Do you want RDMA passthrough to the CVMs? ☒ No ☐ Yes

5. What type of LAGs will your production switch have? ☒ None ☐ Static ☐ Dynamic (LACP)

6. To assign a VLAN to host/CVMs, enter the tag:
Optional: 1 - 4094. Enter 0 (zero) to remove any existing tag.

7. Nutanix requires all hosts and CVMs of a cluster to have static IPs in the same subnet. Pick a subnet.

Netmask of Every Host and CVM: Gateway of Every Host and CVM:

☐ If you plan to deploy Nutanix Objects, click here to learn about important network requirements.

8. Pick a same or different subnet for the IPMIs as well, unless you want them to have no IPs.

Netmask of Every IPMI: Gateway of Every IPMI:

9. Double-check this installer's networking setup.

- There must be one interface in the host-CVM subnet you entered above.
- There must be one interface in the IPMI subnet you entered above.

☐ Skip this validation (e.g. this installer is on a routed network)

List of existing interfaces Refresh Add a new interface Add

- A. Prepare multi-homing with two IP addresses.
- **B. Add a virtual switch dedicated to the IPMI network.**
- C. another physical laptop port to the Foundation VM.
- D. Create a firewall rule blocking customer subnets.

Answer: B

Explanation:

When preparing the cluster offsite in a safe room, the consultant should ensure that the Foundation VM is correctly configured to handle IPMI networking. Implementing a virtual switch dedicated to the IPMI network within the Foundation VM environment ensures that there is a segregated and controlled network path for IPMI traffic, which is crucial for initial hardware configuration and management. This setup facilitates the secure and efficient foundation process before the cluster is moved to the data center.

NEW QUESTION # 301

An administrator is concerned that Prism will be inaccessible if Active Directory is unable to process logins. Which method should the administrator use to access the cluster in the event of this type of outage?

- A. Manage the cluster remotely by downloading ncli to a remote workstation
- B. Manage the cluster by using the "nutanix" user on the Prism leader CVM
- C. Deploy an Active Directory server locally on the cluster
- **D. Create and use an emergency local account on the cluster**

Answer: D

NEW QUESTION # 302

An administrator wants to utilize Network Visualization to monitor the physical and logical network on the Nutanix cluster. The first-hop switch has LLDP enabled. The network switch information is still not being displayed. What is causing this problem?

- A. The cluster is using RDMA-enabled NICs.
- **B. SNMP is not configured properly.**
- C. br0 and br1 are not defined.
- D. The ISL between switches is not configured.

Answer: B
