Our NCS-Core training materials are sold well all over the world, that is to say our customers are from different countries in the world, taking this into consideration, our company has employed many experienced workers to take turns to work at twenty four hours a day, seven days a week in order to provide the best after sale services on our NCS-Core Exam Questions. So as long as you have any question about our NCS-Core exam engine you can just feel free to contact our after sale service staffs at any time, and our NCS-Core training materials will help you get your certification.

Nutanix NCS-Core Exam is designed for professionals who wish to validate their skills in managing and administering Nutanix Core Infrastructure. NCS-Core exam is aimed at individuals who have experience in working with Nutanix Core Infrastructure and wish to showcase their knowledge and expertise in the field. NCS-Core exam is a vendor-neutral certification that tests the candidate's understanding of Nutanix Core Infrastructure, including the installation, configuration, management, and troubleshooting of Nutanix clusters.

Nutanix NCS-Core Certification Exam is a rigorous exam that requires extensive preparation. Candidates must have a solid understanding of Nutanix core infrastructure technologies and be able to apply that knowledge in real-world scenarios. NCS-Core exam consists of multiple-choice questions and is administered online. Candidates must achieve a passing score to earn the certification.

Nutanix Certified Services Core Infrastructure Professional Exam Training Vce & NCS-Core Test Torrent & Nutanix Certified Services Core Infrastructure Professional Torrent Dumps

If you buy the Nutanix NCS-Core practice materials within one year you can enjoy free updates. Being the most competitive and advantageous company in the market, our Nutanix Certified Services Core Infrastructure Professional NCS-Core exam questions have helped tens of millions of exam candidates, realized their dreams all these years. What you can harvest is not only certificate but of successful future from now on just like our former clients.

The NCS-Core certification exam is intended for IT professionals who are responsible for designing, implementing and maintaining Nutanix solutions. NCS-Core exam covers the essential concepts of Nutanix's core infrastructure services, including storage, networking and virtualization. Candidates who Pass NCS-Core Exam will have the skills and knowledge required to implement and manage Nutanix solutions in enterprise environments.

Nutanix Certified Services Core Infrastructure Professional Sample Questions (Q77-Q82):

NEW QUESTION # 77

An administrator receives reports that VDI desktop performance in an 8-node Nutanix VDI environment is poor. Opening applications takes between 1 and 2 minutes.

When investigating the issue, the following conditions are found:

- * Cluster memory utilization: 80%
- * Cluster SSD utilization: 70%
- * Average VM CPU Wait Time: 11%
- * CVM CPU utilization: 75%

Which action should be taken to improve VDI performance?

- A. Add memory to the nodes in the cluster.
- B. Increase the amount of SSD storage in the cluster.
- C. Increase the number of vCPU cores allocated to the CVM.
- **D. Add CPU resources to the cluster.**

Answer: D

NEW QUESTION # 78

When utilizing the Nutanix cluster As Built Document generator, which two configuration elements should a consultant provide when running the `run_as_built.exe` command? (Choose two.)

- A. Remote Site IP
- B. Data Services IP
- **C. Cluster IP**
- **D. Customer Name**

Answer: C,D

Explanation:

When using the Nutanix cluster As Built Document generator, the necessary configuration elements to provide when running the `run_as_built.exe` command include the Cluster IP (B) and the Customer Name (D).

The Cluster IP is required to properly identify and communicate with the cluster to gather configuration and operational data. The Customer Name is typically used to personalize the documentation, making it specific to the client's deployment, which is useful for record-keeping and future reference purposes. References: Nutanix As Built Documentation generator usage guidelines, Nutanix Best Practices for Documentation.

NEW QUESTION # 79

A customer wants to run SAP HANA on a Nutanix cluster with the following characteristics:

- * AHV nodes
- * SAP HANA version 2

* Production database files

Which configuration should be recommended to the customer?

- A. Do not enable compression, deduplication, or erasure coding on the storage container
- B. Start with a cluster containing three or more nodes
- C. Place the SAP HANA Database on the same socket as CVM
- D. Enable only compression for the container that contains the Production database

Answer: A

Explanation:

Ref:

SAP HANA on Nutanix

- Don't configure storage saving functionalities such as compression, deduplication, or erasure coding (EC-X) on a storage container that holds production database files.

NEW QUESTION # 80

An administrator has a 32-node hybrid cluster with CPU, RAM and storage utilization of 80%. A database VM is configured with VM Flash.

What is causing this IO latency?

- A. Curator scans causes by ILM constantly moving data.
- B. Database VM is experiencing high CPU ready time.
- C. VM Flash Mode reduces SSD tier capacity for VMs.
- D. Controller VM is experiencing high CPU ready time.

Answer: A

Explanation:

In a Nutanix cluster, I/O latency can be affected by several factors. Given the scenario where a 32-node hybrid cluster is experiencing I/O latency, one possible cause could be the Information Life Cycle Management (ILM) constantly moving data due to curator scans¹.

In a Nutanix cluster, ILM is responsible for managing data placement across different storage tiers. It promotes frequently accessed data to higher-performance tiers (like SSDs) and demotes less frequently accessed data to lower-performance tiers (like HDDs)¹. This process involves moving data around, which can cause I/O operations to take longer, leading to increased latency¹.

If the working set size (WSS) exceeds the SSD tier capacity, ILM will have to constantly move data between the SSD and HDD tiers to accommodate new data. This constant data movement can lead to increased I/O latency¹.

Therefore, if curator scans caused by ILM are constantly moving data, it could be the reason for the observed I/O latency in this scenario.

NEW QUESTION # 81

For a new AHV cluster installation, a customer has 20 NX-8155-G6 nodes with quad port SFP NICs.

The customer wants to meet the following guidelines:

- * Take advantage of all available 10GbE links
- * Achieve maximum throughput per VM

* Use of redundant ToR switches

* Fastest reconvergence during link failure

How should the load balancing be configured on the host?

- A. `ovs-vsctl set port br0-up other_config:lacp-fallback-ab=true`
`ovs-vsctl set port br0-up lacp=active`
`ovs-vsctl set port br0-up bond_mode=balance-tcp`
- B. `ovs-vsctl set port br0-up bond_mode=balance-slb`
`ovs-vsctl set port br0-up other_config:bond-rebalance-interval=30000`
`ovs-vsctl set port br0 tag=10`
- C. `ovs-vsctl set port br0-up bond_mode=active-backup`
`ovs-vsctl set port br0-up other_config:bond-rebalance-interval=30000`
- D. `ovs-vsctl set port br0-up bond_mode=balance-slb`

Answer: B
