

Official CDCP Practice Test, Test CDCP Cram Review

P.S. Free & New CDCP dumps are available on Google Drive shared by ExamCost: <https://drive.google.com/open?id=1V5Mb-9m0zwEEkZrZn3NYI4k2vxSYgrxJ>

APP test engine of EXIN CDCP exam is popular with at least 60% candidates since all most certification candidates are fashion and easy to adapt to this new studying method. Someone thinks that APP test engine of CDCP exam is convenient to use any time anywhere. Also part of candidates thinks that this version can simulate the real scene with the real test. If you can open the browser you can learn. Also if you want to learn offline, you should not clear the cache after downloading and installing the APP test engine of CDCP Exam.

Our CDCP guide torrent is compiled by experts and approved by the experienced professionals. They are revised and updated according to the change of the syllabus and the latest development situation in the theory and practice. The language is easy to be understood to make any learners have no learning obstacles and our CDCP study questions are suitable for any learners. Our CDCP study questions are linked tightly with the exam papers in the past and conform to the popular trend in the industry. Our product convey you more important information with less amount of the questions and answers. Thus we can be sure that our CDCP guide torrent are of high quality and can help you pass the exam with high probability.

CDCP Practice Test - CDCP Training Torrent: Certified Data Centre Professional (CDCP) - CDCP Study Guide

ExamCost experts have also developed Certified Data Centre Professional (CDCP) (CDCP) test simulation software for you to assess and improve yourself. This is especially useful for intensive preparation and revision. It will provide you with an Certified Data Centre Professional (CDCP) (CDCP) exam environment and will give you real exam EXIN CDCP questions.

EXIN CDCP Exam Syllabus Topics:

Topic	Details
Topic 1	- Equipment Racks: It discusses power rail - strip options, security considerations, and rack standards, properties and selection criteria.
Topic 2	Cooling Infrastructure: The topic focuses on liquid immersion cooling, supplemental cooling options, sensible and latent heat definitions, and temperature and humidity recommendations.
Topic 3	Physical Security and Safety: Sub-topics are about physical security considerations and physical safety considerations.

Topic 4	• Auxiliary Systems: The topic covers water leak detection systems, data centre monitoring requirements, EMS, BMS and DCIM.
Topic 5	• Light: This topic covers light fixture types and placement, emergency lighting, and emergency Power Supply (EPS).
Topic 6	• Raised Floor • Suspended Ceiling: The topic discusses applicable standards, signal reference grid, and disability act and regulations.
Topic 7	• Electro Magnetic Fields: The topic deals with effects of EMF on human health and equipment (H)EMP, standards, and EMF shielding solutions.
Topic 8	• Fire Safety • Protection: This topic gives an understanding of standards for fire suppression, detection systems, total flooding fire suppression techniques, and handheld extinguishers. Additionally, it covers Signage and safety.

EXIN Certified Data Centre Professional (CDCP) Sample Questions (Q77-Q82):

NEW QUESTION # 77

What is a disadvantage of a Dynamic UPS?

- A. They are only available for small to medium sized data centres, due to their limited capacity of 200 kVA
- **B. They are heavy and more noisy.**
- C. It needs a separate back-up generator as their autonomy time is less than 60 seconds.
- D. It needs additional cooling infrastructure as high temperatures reduces the lifetime of a Dynamic UPS.

Answer: B

NEW QUESTION # 78

Which type of Fire Detection Device is recommended for protecting a Data Center?

- **A. Smoke detector**
- B. Flame detector
- C. None of the above
- D. Heat detector

Answer: A

Explanation:

According to the CDCP® Preparation Guide, smoke detectors are the most common type of fire detection devices used in data centers, as they can detect a fire in its early stages and provide early warning to the occupants and authorities. Smoke detectors can be either spot-type or air-aspirating, depending on the design and goals of the data center. Spot-type detectors are inexpensive and simple, but may cause activation delay and false alarms. Air-aspirating detectors are more sensitive and reliable, but may require more maintenance and installation costs. Both types of detectors should be installed in accordance with the relevant standards and codes, such as NFPA 72 and EN 54.

NEW QUESTION # 79

What should be taken into consideration when using patch cables?

- A. Patch cables can only be used in combination with flat patch panels.
- B. The patch cable should always be the same of a lower class the structured cable.
- **C. The patch cable should always be the same or a higher class the structured cable.**

- D. Patch cables can only be used in combination with angled patch panels.

Answer: C

Explanation:

Patch cables of a lower class than the structured cabling can degrade the overall link performance, so it is best practice to use the same or higher class.

NEW QUESTION # 80

What is the most preferred unit of measure for cooling capacity?

- A. Ton
- B. BTU
- C. Horsepower
- **D. Watt**

Answer: D

Explanation:

Cooling capacity is the measure of a cooling system's ability to remove heat from a space. The most preferred unit of measure for cooling capacity is watt (W), which is the SI unit for power. Watt is defined as the amount of energy transferred or converted per unit time. One watt is equal to one joule of energy per second. Using watt as the unit of measure for cooling capacity allows for easy comparison and calculation of the cooling performance and efficiency of different cooling systems.

Other units of measure for cooling capacity are ton, BTU, and horsepower, but they are less common and less convenient than watt. Ton is a unit of measure that describes how much water at freezing temperature can be frozen in 24 hours, equivalent to 3.5 kW or 12,000 BTU/h. BTU (British Thermal Unit) is a unit of measure that describes the amount of heat required to raise the temperature of one pound of water by one degree Fahrenheit, equivalent to 0.293 W. Horsepower is a unit of measure that describes the rate at which work is done, equivalent to 746 W.

NEW QUESTION # 81

What is the minimum clearance space required below water sprinkler heads and nozzles of gas-based fire suppression systems?

- A. 60 cm / 24 inches
- **B. 46 cm / 18 inches**
- C. 120 cm / 47 inches
- D. 64 cm / 25 inches

Answer: B

Explanation:

The minimum clearance space required below water sprinkler heads and nozzles of gas-based fire suppression systems is 46 cm / 18 inches, according to the CDCP Preparation Guide1 and OSHA regulation 29 CFR

1910.159 (10)2. This clearance space is necessary to ensure that the sprinkler spray or gas discharge can reach the fire and cover the protected area effectively. Any material or obstruction below this clearance space can interfere with the sprinkler or gas distribution and reduce the fire suppression performance. Therefore, building owners and managers should ensure that all storage and objects in the data centre are kept below this clearance space, and that the clearance space is maintained at all times.
