Our company is famous for its high-quality in this field especially for Terraform-Associate-003 certification exams. It has been accepted by thousands of candidates who practice our study materials for their Terraform-Associate-003 exam. In this major environment, people are facing more job pressure. So they want to get a certification rise above the common herd. How to choose valid and efficient Terraform-Associate-003 Guide Torrent should be the key topic most candidates may concern.

HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample Questions (Q52-Q57):

NEW QUESTION # 52
A Terraform output that sets the "sensitive" argument to true will not store that value in the state file.

- A. False
- B. True

Answer: B

Explanation:
A Terraform output that sets the "sensitive" argument to true will store that value in the state file. The purpose of setting sensitive = true is to prevent the value from being displayed in the CLI output during terraform plan and terraform apply, and to mask it in the Terraform UI. However, it does not affect the storage of the value in the state file. Sensitive outputs are still written to the state file to ensure that Terraform can manage resources correctly during subsequent operations.
Reference:
Terraform documentation on sensitive outputs: Terraform Output Values

NEW QUESTION # 53
Which command must you first run before performing further Terraform operations in a working directory?

- A. terraform workspace
- B. terraform import
- C. terraform init
- D. terraform plan

Answer: C

Explanation:
terraform init is the first command that should be run after writing a new Terraform configuration or cloning an existing one from version control. It initializes a working directory containing Terraform configuration files and downloads any required providers and modules. The other commands are used for different purposes, such as importing existing resources, switching between workspaces, generating execution plans, etc.

NEW QUESTION # 54
What is a key benefit of the Terraform state file?

- A. A state file is a source of truth for resources provisioned with a public cloud console
- B. A state file is a source of truth for resources provisioned with Terraform
- C. A state file is the desired state expressed by the Terraform code files
- D. A state file can schedule recurring infrastructure tasks

Answer: B

Explanation:
This is a key benefit of the Terraform state file, as it stores and tracks the metadata and attributes of the resources that are managed by Terraform, and allows Terraform to compare the current state with the desired state expressed by your configuration files.

NEW QUESTION # 55
The public Terraform Module Registry is free to use.

- A. False
- B. True

Answer: B

Explanation:
Explanation
The public Terraform Module Registry is free to use, as it is a public service that hosts thousands of self-contained packages called modules that are used to provision infrastructure. You can browse, use, and publish modules to the registry without any cost.

NEW QUESTION # 56

In a Terraform Cloud workpace linked to a version control repository speculative plan rum start automatically commit changes to version control.

- A. False
- B. True

Answer: B

Explanation:
Explanation
When you use a remote backend that needs authentication, HashiCorp recommends that you:
