# OGA-032 Ausbildungsressourcen & OGA-032 Examsfragen

Sind Sie mit Ihrer Arbeit zufrieden? Sind Sie damit Zufrieden, was Sie jetzt machen? Wollen Sie Ihre Arbeitsfähigkeit erhöhen? Dann müssen Sie zuerst mehr nützliche Fähigkeiten für Ihre Arbeit beherrschen. Und das wichtigste ist, dass Arbietsgeber wissen, Sie mehr Arbeitsfähigkeiten beherrschen. Dann legen Sie The Open Group OGA-032 Prüfung ab. OGA-032 Prüfung kann Ihren Wunsch erreichen. Und es macht nichts, wenn Sie die Prüfungsfragen nicht genug kennen, weil Sie die Hilfe und die Vorbereitungswerkzeuge an Pass4Test finden können. Die Prüfungsfragen und-antworten können Ihnen helfen, The Open Group OGA-032 Zertifikat zu bekommen.

Die Zertifizierung "ArchiMate 3 Teil 2" ist international anerkannt und wird in der Industrie sehr geschätzt. Sie zeigt, dass der Kandidat fähig ist, die ArchiMate 3 Modelingsprache zu nutzen, um komplexe Systeme zu entwerfen und zu verwalten. Diese Zertifizierung ist auch ein wertvolles Asset für Fachleute, die ihre Karrierechancen verbessern und ihr Verdienstpotenzial steigern möchten.

>> OGA-032 Ausbildungsressourcen <<

# OGA-032 PrüfungGuide, The Open Group OGA-032 Zertifikat - ArchiMate 3 Part 2 Exam

Möchten Sie die The Open Group OGA-032 Prüfung einmalig bestehen? Pass4Test kann Ihren Wunsch erfüllen und Ihre beste Wahl sein. Bei uns werden wir Ihre Forderungen erfüllen. Nachdem Sie unsere Produkte von OGA-032 Zertifizierung gekauft haben, werden wir Ihnen eine einjährige Aktualisierung versprechen. Falls Sie die OGA-032 Prüfung leider nicht bestehen, geben wir Ihnen eine volle Rücherstattung.

# The Open Group ArchiMate 3 Part 2 Exam OGA-032 Prüfungsfragen mit Lösungen (Q11-Q16):

#### 11. Frage

Please read this scenario prior to answering the question

ArchiCar has been a market leader in the premium priced luxury car sector for the last decade. Its product leadership strategy has brought superior products to market, and enabled ArchiCar to achieve premium prices for its cars. This strategy has been widely successful in the past, but recently competitors have been offering comparable products and taking significant market share. The governing board of ArchiCar has identified opportunities in emerging markets where the ArchiCar brand is associated with luxury and high performance products, but is thought to be too expensive for mass-market success.

Based on this assessment, the board has made the decision to setup a subsidiary company to mass-produce affordable cars locally. This will be achieved by focusing on a strategy of operational excellence. Such a strategy is ideal for such markets where customers value cost over other factors.

To facilitate this strategic transformation, the project has been divided into multiple phases within a five-year program. The initial phase, known as "Achieving Operational Excellence," is underway. The engineering team has begun devising an action plan to drive the necessary changes and outlining the technological conditions that must be met. The product architect has identified three current capabilities - industry-leading engineering, high-quality materials sourcing, and cutting-edge focussed R&D - along with their

contributions to the new production philosophy.

Moving forward, it has been determined that two out of the three current capabilities require revision.

Materials sourcing needs to be adjusted to meet optimization demands, and R&D targets must align with future goals to enable affordable production.

Additionally, process engineering is introduced as a fourth capability to shift the company's focus from products to a process-oriented approach.

The Enterprise Architecture team has been tasked with migration planning, and identifying keywork packages and deliverables. They have identified two transition states between the current and future scenario. The first transition aims to adjust current capabilities, including revising the R&D approach and procurement strategy. The second transition aims to shift from a product-centric mindset to a process-focused approach and adjust materials sourcing accordingly.

#### It is important to consider existing

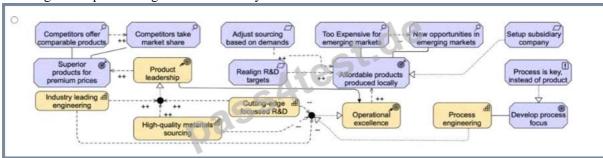

supplier contracts that cannot be immediately canceled during this process.

The Enterprise Architecture team has identified that the second transition must implement a process framework, in order to shift to a process focus and meet a number of requirements, including the requirement for end-to-end process thinking. As this requirement impacts procurement processes, it also impacts the procurement strategy.

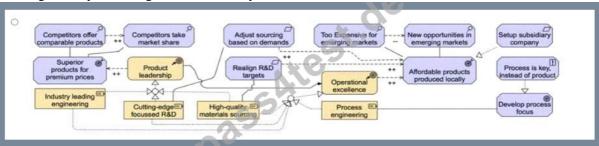

#### Refer to the Scenario

You have been tasked with modeling the current capabilities of ArchiCar, identifying the capabilities necessary for the company to achieve Operational Excellence, and showing the motivations behind these changes Which of the following models best answers this?

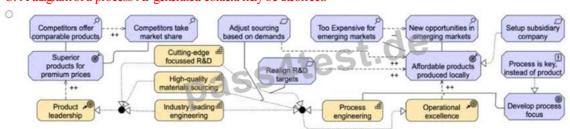

• A. A diagram of a process AI-generated content may be incorrect.

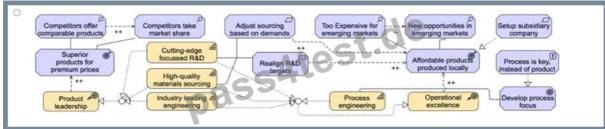

• B. A diagram of a process AI-generated content may be incorrect.

• C. A diagram of a process AI-generated content may be incorrect.

D. A diagram of a process AI-generated content may be incorrect.

#### Begründung:

We need to find the model that best represents:

- \* Current Capabilities- Industry-leading engineering, high-quality materials sourcing, and cutting-edge focused R&D.
- \* Strategic Shift- Moving fromproduct leadershiptooperational excellenceto enter emerging markets.
- \* Required Changes-
- \* Adjusting R&D targets to support cost-effective production.
- \* Revisingmaterials sourcingfor optimization.
- \* Introducingprocess engineeringto enable a process-oriented mindset.
- \* Motivations Behind the Changes-
- \* Competitor pressure.
- \* Emerging market opportunities.
- \* High costs limiting mass-market success.

Why D is the Best Choice:

#Includes all current and future capabilities- Shows the existing strengths ofengineering, R&D, and materials sourcingwhile introducingprocess engineering required for operational excellence.#Clearly depicts the shift in strategy- Fromproduct leadershiptooperational excellenceand the necessary transformations.#Captures stakeholder concerns and motivations-Including competition, cost concerns, and emerging market opportunities.#Represents dependencies and sequencing correctly-Reflecting how each capability change contributes to the transition states and ultimate business goals.

Why Not A, B, or C?

- \* A:Does not properly represent the transition betweenproduct leadership and operational excellence.
- \* B:Fails to clearly define the requiredcapability changesand motivations.
- \* C:Lacks key relationships between strategy shifts and operational changes.

#### 12. Frage

Please read this scenario prior to answering the question

ArchiSurance has decided to leverage its financial expertise by offering defined contribution retirement plans.

Each trading day, ArchiSurance submits consolidated mutual fund trading transactions to a stock exchange on behalf of its retirement plan participants.

The daily mutual fund trading cycle consists of four key processes: Transaction capture, pricing, trading and reconciliation. Transaction capture consists of two sub-processes: manual exchange and loans and distributions (L&D). For transaction capture, retirement plan participants use an online account management application to enter manual fund exchange transactions. For L&D, plan participants use a separate application to enter requests. The L&D application determines whether the request can be fulfilled based on the mutual fund balances held in each plan balances and a set of business rules. Each day's captured manual exchange transactions accumulate in a transaction database.

ArchiSurance contracts with a third-party information service to receive a file of mutual fund prices at the close of each trading day. The pricing application uses this file to convert captured transaction into trades, and then validates each trade against the mutual fund balances held in each plan. The pricing application generates a trade file with the minimum number of trades necessary. The trading application sends this file to an external trading service.

When the trading application

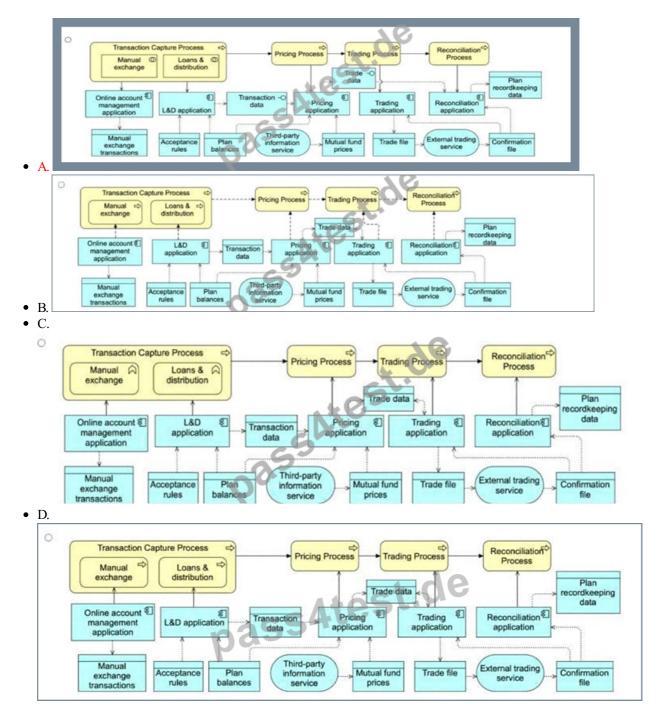

receives a confirmation file back from the trading service, it causes the reconciliation application to update the plan recordkeeping database.

The account management and L&D applications are hosted on separate application server clusters. Each cluster is a physically separate host that runs application server software on a set of virtualized hosts. All of these applications use a database server infrastructure that is hosted on another separate cluster of virtualized servers also on a dedicated physical host. The pricing, consolidation, trading and reconciliation applications, however, are batch applications that run on the ArchiSurance mainframe computer. All application hosts are connected via a converged data center network (DCN), which also connects them to a storage area network (SAN) as well as a wide area network (WAN) that is used to communicate with the external trading service. The SAN includes two physically separate storage arrays, one of which holds data for all databases, and another that holds data for all files.

Refer to the Scenario

The systems analysts would like to better understand the business processes and applications for daily fund trading. You have been asked to describe the business processes and sub-processes, the applications that they use, the data objects accessed by those applications, and the external application services that access some of those data objects.

Which of the following is the best answer? Note that you are not required to model the business actors/roles.

### Antwort: A

#### Begründung:

In this scenario, the goal is to model thebusiness processes, theirsub-processes, theapplications supporting these processes, and thedata objects these applications access. Additionally, external services that access some of these data objects need to be shown. This includes capturing the key processes and their dependencies, as well as understanding how the applications interact with data and external services.

Key ArchiMate® 3.2 Concepts Applied:

- \* Business Processes and Sub-Processes:
- \* Transaction Capture Process: Consists of two sub-processes:
- \* Manual Exchange
- \* Loans & Distribution (L&D)This process is responsible for capturing transactions from users through different applications (Online Account Management, L&D Application).
- \* Pricing Process: This process uses the Mutual Fund Prices from a third-party service and the Plan Balancesto validate and price
- \* Trading Process: This process generates a Trade Fileand interacts with an external Trading Service.
- \* Reconciliation Process: This final process updates the Plan Recordkeeping Dataafter confirming trades from the External Trading

#### Service.

- \* Applications and Data:
- \* Online Account Management Application and Management Application: These capture user inputs for transactions and maintain Transaction Data and Plan Balances.
- \* Pricing Application: UsesMutual Fund PricesandTransaction Datato generateTrade Data.
- \* Trading Application: SubmitsTrade Dataand receives aConfirmation Filefromthe external Trading Service.
- \* Reconciliation Application: Uses the Confirmation Fileto update Plan Recordkeeping Data.
- \* External Application Services:
- \* Third-Party Information Service: ProvidesMutual Fund Prices.
- \* External Trading Service: Processes trades and returns a Confirmation File.
- \* Data Objects:
- \* Transaction Data: Captured by the transaction capture processes.
- \* Mutual Fund Prices: Received from the third-party service.
- \* Trade Data: Generated by the pricing and trading applications.
- \* Plan Recordkeeping Data: Updated by the reconciliation process after trade confirmation.

#### Why Option B is Correct:

- \* Option Byrovides the most complete and accurate representation of the scenario. It captures the business processes(Transaction Capture, Pricing, Trading, Reconciliation) and their sub-processes, while showing the appropriate connections to the applications that support these processes.
- \* It clearly depicts thedata objects(Transaction Data, Plan Balances, Trade File, Mutual Fund Prices, Plan Recordkeeping Data) and their flows between the processes and applications.
- \* The model also includes the external services (Third-Party Information Service and External Trading Service), showing how these interact with the internal applications and data objects.
- \* It accurately represents the flow of Trade Datafrom the Pricing Application to the Trading Application , and the use of Mutual Fund Prices by the Pricing Process.

Why Other Options Are Incorrect:

- \* Option AandOption Dmiss some critical connections between the applications and the external services. They also lack clarity in how the data flows between the processes and applications.
- \* Option Cdoes not adequately represent the interaction between the applications and the external services (e.g., Third-Party Information Service), which is a key requirement in this scenario.

#### Conclusion

Option Bprovides the best and most accurate description of the business processes, applications, data objects, and external services involved in ArchiSurance's daily fund trading operations, following ArchiMate® 3.2 standards for modeling business processes and applications.

# 13. Frage

Please read this scenario prior to answering the question

The IT Operations (IT Ops) department at ArchiSurance has five core responsibilities, each encompassing a dedicated business process: (1) Batch Operations (Batch Ops), (2) Online Operations (Online Ops), (3) Security Operations (Security Ops), (4) User Support and (5) Continuous Improvement. Service level agreements (SLAs) are in place for Batch Ops and Online Ops, and each Ops process generates monitoring data that is utilized by the Continuous Improvement process.

The System Ops category consists of Batch Ops, Online Ops, and Security Ops, each having an incident management sub-process. These sub-processes are triggered by Batch, Online, and Security Incidents, respectively. In the initial stages of the incident management sub-processes, an Incident Alert is shared with the other System Ops processes by posting it to the Alert Buffer. Batch Ops relies on a schedule that outlines all batch jobs and their dependencies. This schedule serves two sub-processes: Batch Planning, which updates the schedule for use by the Execution Management sub-process.

The Batch Ops process relies on a suite of interconnected applications to facilitate its operations. Among these applications, the Batch Scheduler plays a vital role by allowing users to manage a comprehensive database of jobs, job schedules, and dependencies. It effectively launches batch jobs according to the information stored in the database.

Working in conjunction with the Batch Scheduler, the Batch Monitor application utilizes the job schedules as a reference point to monitor job execution. It identifies any exceptional conditions that may arise during the execution process. To ensure effective handling of these exceptions, the Batch Monitor communicates the information to both the Batch Scheduler and the Incident Handler applications through the previously mentioned Alert Buffer.

The Incident Handler application operates based on a defined set of business rules. It uses these rules to determine the relevant systems and individuals that need to be notified in the event of each incident.

Subsequently, the Incident Handler

application generates appropriate notifications according to these determinations.

Recognizing the criticality of the Batch Scheduler, Batch Monitor, and Incident Handler applications, ArchiSurance has implemented redundant hosting arrangements across multiple geographically distributed data centers. In each data center, these three applications

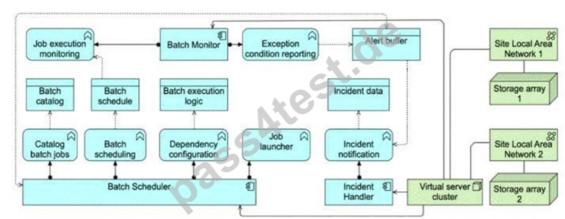

are supported by fully redundant virtual server clusters. Each cluster is connected to two site local area networks, both of which are further linked to separate storage array hardware devices.

Refer to the scenario

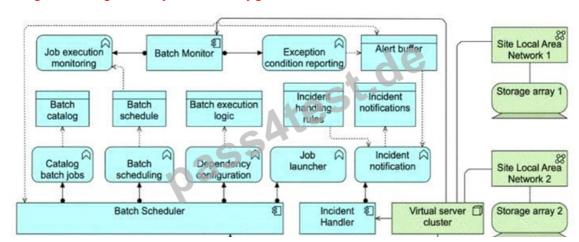

As part of an IT service management initiative, you have been assigned the task to show how applications and technology support the Batch Ops process. This should show the relationships between the applications, their functions, the data they access, and the technology that hosts the applications and data, along with the networks that connect the servers. It is only necessary to model a single data center.

Which of the following answers provides the most complete and accurate model?

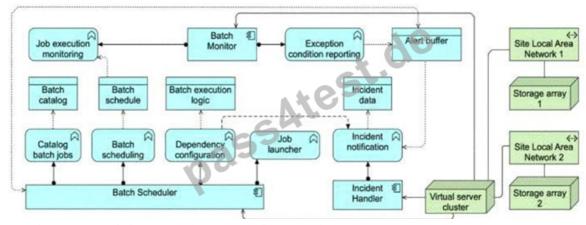

A. A diagram of a work flow Description automatically generated

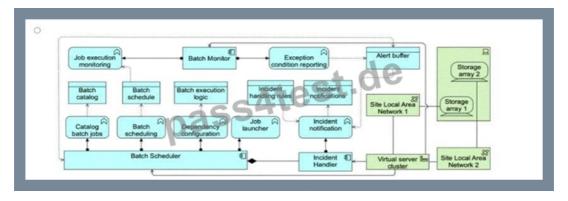

• B. A diagram of a firefighter Description automatically generated

C. A diagram of a software system Description automatically generated with medium confidence

• D. A diagram of a work flow Description automatically generated

#### Antwort: B

#### Begründung:

The correct answer is Cas it provides the most complete and accurate model according to the ArchiMate® 3 framework and the given scenario.

Here's why:

- \* Business Processes and Sub-Processes:
- \* Batch Operations (Batch Ops) is one of the core responsibilities in IT Operations, and its processes are modeled clearly. The Batch Scheduleris responsible for managing batch jobs, schedules, and dependencies.
- \* TheBatch Monitoris correctly shown to monitor the job execution and notify exceptions using theAlert Buffer.
- \* The Incident Handleris used to notify relevant systems and individuals, triggered by the incident detection from Batch Monitor. This is modeled by the use of incident handling rules and notifications.
- \* Application Layer (Application Components and Functions):
- \* The Batch Scheduler, Batch Monitor, and Incident Handlerare accurately depicted as the main applications. These applications are crucial for managing job scheduling, monitoring execution, and handling incidents.
- \* These applications share the same virtual server cluster, which is an important detail reflecting redundancy and high availability, which was mentioned in the scenario.
- \* The interrelationships between applications are accurately depicted: the Batch Schedulerlaunches jobs, the Batch Monitorchecks their status, and Incident Handlerdeals with exceptions.
- \* Data Access:
- \* TheBatch Scheduleraccesses and updates batch jobs and schedules, and this is represented clearly.
- \* The Incident data and Incident notifications are accurately modeled as being used by Incident Handler.
- \* Technology Layer:
- \* The Virtual server cluster, Storage arrays, and Site Local Area Networksare appropriately connected to support the application infrastructure.
- \* Redundancy is shown through the use of multiple storage arrays and network connections, as described in the scenario.
- \* Accuracy in Relationship Types (ArchiMate® 3) References:
- \* The relationships between components are modeled using ArchiMate® 3 standards, such as flow relationships between the Batch Monitor and Alert Buffer or between the Incident Handler and storage components.
- \* Triggeringrelationships exist between the applications that manage batch jobs and the monitoring /notification process, ensuring correct job execution and incident handling.

Conclusion:AnswerCis the most complete model, as it accurately reflects the roles of the various applications, their interactions, and the underlying technology components in support of theBatch Ops process, following the guidelines and modeling standards of ArchiMate® 3.

# 14. Frage

Please read this scenario prior to answering the question

ArchiAir Catering Services (ACS) manages the catering services for ArchiAir, a leading airline. ACS is the sole catering supplier for all ArchiAir flights, and its services include full provisioning to the aircraft.

Currently, ACS operates three central production facilities, supported by distribution hubs and local pre-flight production facilities. The central production facilities are responsible for producing standardized non-food materials (such as plates, cutlery, and boxes), non-perishable food products, and key ingredients required by the local production facilities. These materials are subsequently distributed to the distribution hubs, which also serve as warehouses for the local production facilities. Within the local production facilities, multiple production machines are utilized, each featuring dedicated workstations for chefs and quality inspectors. Most of the local production facilities employ fully automated assembly lines, including built-in packaging stations. The loaded service trolleys are then transported to the aircraft using small lorries.

In response to investor pressure for ArchiAir to reduce its carbon footprint, the CEO of ACS has announced a plan to address this

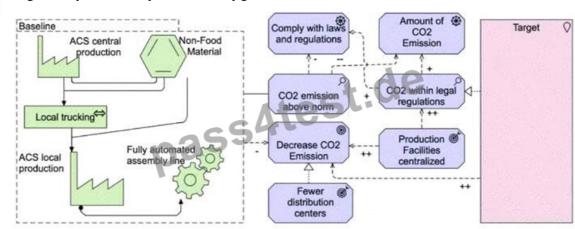

environmental concern. Subsequently, the Ministry of Social Welfare and Health has enacted a law mandating a reduction in CO2 emissions from all production facilities by the end of the year. Additionally, the airline's decision to raise ticket prices due to escalating fuel costs has led to a decrease in passenger numbers. This, in turn, impacts the volume of non-food materials required from ACS. An internal investigation has produced a report highlighting the potential benefits of centralizing production facilities and reducing the number of distribution centers. Such changes would result in lower CO2 emissions while still effectively meeting all the requirements of ArchiAir.

In addition to evaluating its supply chain to reduce its carbon footprint, ArchiAir is taking proactive steps to achieve a net zero carbon footprint for its IT operations. The Chief Information Officer (CIO) has identified two crucial requirements to support this endeavor. The first requirement involves switching to renewable energy for ACS facilities, which are often located in remote areas where traditional fuels are the primary source of energy. To align with sustainability goals, ArchiAir aims to transition these facilities to renewable energy sources. By utilizing renewable energy, ArchiAir can significantly reduce its reliance on traditional fuels and contribute to a greener operation. The second requirement pertains to the scalability of ArchiAir's IT operations, taking into account the airline's susceptibility to seasonal changes in demand. The CIO has observed notable disparities between sites that have additional blade servers and can scale their capacity, and sites that solely rely on the two mainframes housed in central facilities. A comprehensive report has revealed that the blade servers have a negligible impact on resource waste, whereas the mainframes are notorious for their power inefficiency, particularly during periods of low demand.

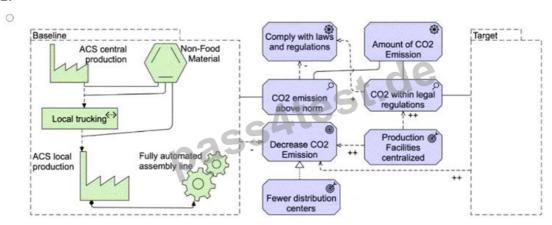

#### Refer to the Scenario

Which of the following answers best describes the proposed transition from baseline to target, including details of motivation for changes? Note that there is no need to show the details of the target state.

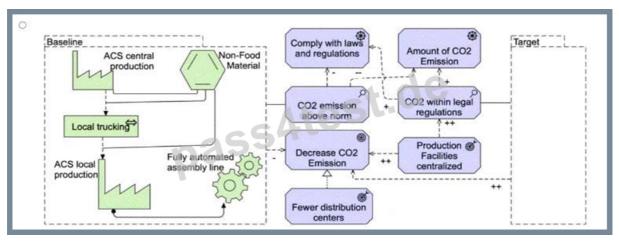

#### • A. A diagram of a process Description automatically generated

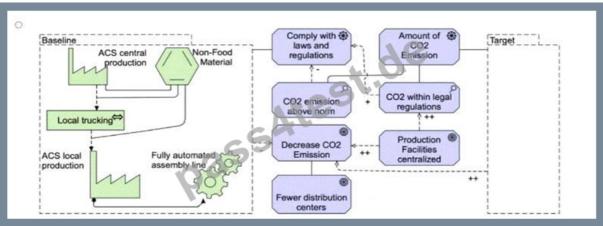

# • B.

• C.

• D.

# **Antwort: C**

#### Begriindung

The correct answer isD, as it best describes the transition from the baseline to the target state, including the motivation for changes based on the scenario. Here's a detailed explanation of whyDis the most accurate model:

- \* Baseline and Target:
- \* The Baselinestate in all answers correctly depicts the current structure of ACS's operations, including the ACS Central Production, Local Trucking, ACS Local Production, and Fully Automated Assembly Line.
- \* Dcaptures the essential transition from this baseline state to the target state by illustrating how the organization is aiming to decrease CO2 emissions, as required by the new regulations, and how they intend to centralize production facilities.
- \* Motivation for Changes (Decrease in CO2 Emissions):
- \* The CEO's plan to reduceCO2 emissions a critical driver for change. This is captured clearly in D, which shows the effects of Decreasing CO2 Emissions, Complying with Laws and Regulations, and Centralizing Production Facilities.
- \* The Ministry of Social Welfare and Health's lawmandating CO2 reductions is accurately reflected in D, showing compliance as part of the motivation.
- \* Dalso depicts the motivation to centralize production facilities, which helps reduce CO2 emissions and aligns with the internal report suggesting that fewer distribution centers can meet ACS's needs effectively.
- \* Business and Environmental Factors:
- \* The scenario also points out that passenger numbers have decreased due to rising ticket prices, which reduces the demand for non-food materials from ACS. This factor is linked to the centralization effort, as reducing the need for distribution centers can reduce costs while still meeting business needs.
- \* Dreflects this by linkingFewer Distribution CentersandCentralized Production Facilities to both decreased emissions and operational efficiency.
- \* Compliance with Laws and Regulations:
- \* Dshows a clear connection between compliance with CO2 Emission Lawsand the Amount of CO2 Emissions generated by ACS, which is an essential driver of change in the scenario.
- \* The need to ensure that emissions are within the legal limit is modeled effectively inD, reflecting the scenario's requirement to meet regulatory expectations by the end of the year.
- \* Centralization of Production:
- \* The scenario suggests that centralizing production is one way to reduce emissions and achieve operational efficiency. This is depicted clearly inD, where Production Facilities Centralized leads to both fewer distribution centers and a significant decrease in

CO2 emissions.

- \* Dlinks the motivation for fewer distribution centers to environmental sustainability (CO2 reduction) as well as operational improvements.
- \* Comprehensive ArchiMate® 3 Compliance:
- \* Daligns well with ArchiMate® 3 standards. It models the Motivation Elements such as goals (e.g., Decrease CO2 Emissions), assessments (e.g., CO2 Emission Above Norm), and requirements (e.
- g., Comply with Laws and Regulations) accurately.
- \* The relationships between these motivation elements are correctly depicted using ArchiMate® connectors like influences and associations, ensuring that the transition from baseline to target is clear and fully compliant with ArchiMate® 3 best practices. Conclusion:AnswerDprovides the best representation of the proposed transition, focusing on the motivations for centralization and reduction of CO2 emissions. It accurately reflects the scenario's requirements, including legal compliance, environmental goals, and operational changes, all while following ArchiMate® 3 modeling standards.

# 15. Frage

Please read this scenario prior to answering the question

ArchiCar has been a market leader in the premium priced luxury car sector for the last decade. Its product leadership strategy has brought superior products to market, and enabled ArchiCar to achieve premium prices for its cars. This strategy has been widely successful in the past, but recently competitors have been offering comparable products and taking significant market share. The governing board of ArchiCar has identified opportunities in emerging markets where the ArchiCar brand is associated with luxury and high performance products, but is thought to be too expensive for mass-market success. Based on this assessment, the board has made the decision to setup a subsidiary company to mass- produce affordable cars locally. This will be achieved by focusing on a strategy of operational excellence. Such a strategy is ideal for such markets where customers value cost over other factors. To facilitate this strategic transformation, the project has been divided into multiple phases within a five-year program. The initial phase, known as "Achieving Operational Excellence," is underway. The engineering team has begun devising an action plan to drive the necessary changes and outlining the technological conditions that must be met. The product architect has identified three current capabilities - industry-leading engineering, high-quality materials sourcing, and cutting-edge focussed R&D - along with their contributions to the new production philosophy.

Moving forward, it has been determined that two out of the three current capabilities require revision.

Materials sourcing needs to be adjusted to meet optimization demands, and R&D targets must align with future goals to enable affordable production. Additionally, process engineering is introduced as a fourth capability to shift the company's focus from products to a process-oriented approach.

The Enterprise Architecture team has been tasked with migration planning, and identifying key work packages and deliverables. They have identified two transition states between the current and future scenario.

The first transition aims to adjust

current capabilities, including revising the R&D approach and procurement strategy. The second transition aims to shift from a product-centric mindset to a process-focused approach and adjust materials sourcing accordingly. It is important to consider existing supplier contracts that cannot be immediately canceled during this process.

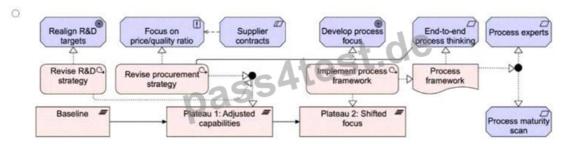

The Enterprise Architecture team has identified that the second transition must implement a process framework, in order to shift to a process focus and meet a number of requirements, including the requirement for end-to-end process thinking. As this requirement impacts procurement processes, it also impacts the procurement strategy.

Refer to the Scenario

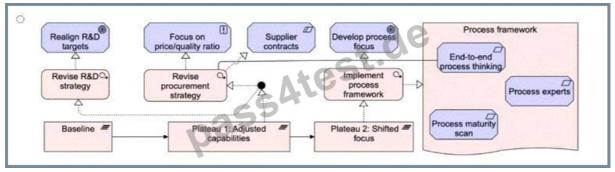

You have been asked to model parts of the overall scenario, including migration planning, the motivations driving the migration, and the work packages necessary to achieve the desired deliverables.

Which of the following answers best describes the scenario?

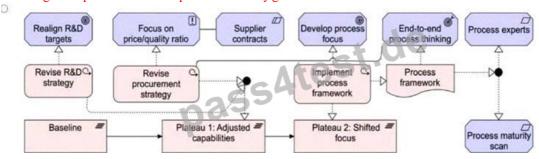

• A. A diagram of a process Description automatically generated

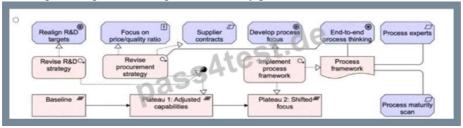

• B. A diagram of a process Description automatically generated

• C. A diagram of process flow Description automatically generated

D. A diagram of a process Description automatically generated

#### **Antwort: C**

# Begründung:

This scenario involvesmigration planningfor ArchiCar as it transitions from aproduct-centric approachto anoperational excellence strategyfor mass-producing affordable cars in emerging markets. The task is to model the steps involved, includingwork packages, deliverables, and themotivations driving the transitions.

Key ArchiMate® 3.2 Concepts Applied:

- \* Capabilities and Transition Phases:
- \* The existing capabilities-R&D, material sourcing, and engineering-need to be adjusted to fit the new strategy. In particular:
- \* Revising R&D targetsto align with the goal of affordable production.
- \* Revising the procurement strategyto optimize material sourcing.
- \* Introduction of aprocess focusin the second phase to shift from a product-centered approach to operational excellence.
- \* Two transition states are identified:
- \* Plateau 1 (Adjusted Capabilities):Focuses on revising the R&D strategyand procurement strategy.
- \* Plateau 2 (Shifted Focus):Involves shifting to a process-oriented focus, adjusting material sourcing, and implementing aprocess frameworkto enableend-to-end process thinking.
- \* Work Packages and Deliverables:
- \* Work packages include activities such as revising R&D strategy and procurement strategy during the first transition, and then developing process focus and implementing a process framework in the second transition.
- \* These work packages are linked tokey deliverables:
- \* Plateau 1: Realigning R&D and procurement strategies to achieve adjusted capabilities.
- \* Plateau 2: Implementing a process framework, shifting to process-orientedthinking, and achieving the operational excellence goals.
- \* Motivation Elements:
- \* The migration is driven by a need to realign current capabilities (such as focusing R&D on affordability and optimizing procurement) and a requirement to shift focus from product leadership to operational excellence.
- \* The external driver is the competition and market opportunity in emerging markets, where cost is more critical than luxury.
- \* Dependencies and Constraints:
- \* Supplier contracts may impose constraints on how quickly procurement strategies can change, which is considered in the transition planning.
- \* The process framework must be implemented in a way that supports end-to-end process thinking

Why Option B is Correct:

- \* Option Baccurately reflects the two transition phases (Plateaus 1 and 2) and shows the appropriate work packages and deliverables in line with the scenario.
- \* It clearly models the steps forrevising R&D strategyandprocurement strategyin the first transition, and the shift to aprocess focusin the second transition.
- \* The process framework and its link toend-to-end process thinking and procurement strategy are also correctly modeled, fulfilling the requirements of the scenario.
- \* Motivationsfor the changes, such as the focus on the price/quality ratio, and the external drivers for shifting strategy are well captured.

Why Other Options Are Incorrect:

- \* Option AandOption Cmisrepresent or omit important relationships between work packages, such as the link between theprocess frameworkand theend-to-end process thinking.
- \* Option Ddoes not correctly capture the sequence of work packages and the logical flow of transitions between phases. Conclusion:

Option Byrovides the most complete and accurate description of the scenario, correctly illustrating the migration planning, motivations, and thework packagesnecessary to achieve the target state. It aligns well with ArchiMate® 3.2 modeling standards and meets the scenario's requirements.

### 16. Frage

.....

Wollen Sie den Plan machen, dass Sie The Open Group OGA-032 Zertifizierungsprüfung ablegen, um Ihre Fähigkeit zu entwickeln. Wenn Sie The Open Group OGA-032 Prüfung ablegen, ob Sie die geeigneten Lernhilfe finden? Und welche Unterlage sind wertvoll? Haben Sie The Open Group OGA-032 Dumps gewählt? Wenn ja, sorgen Sie sich bitte nicht um den Misserfolg.
