OGA-032 Exam Simulator | OGA-032 Examcollection

No one can beat us in terms of The Open Group OGA-032 exam prices. Download the The Open Group OGA-032 exam dumps after paying discounted prices and start this journey. You can study OGA-032 Exam Engine anytime and anyplace for the convenience our three versions of our OGA-032 study questions bring.

The OGA-032 Exam is designed to test the candidate's ability to apply the ArchiMate 3 modeling language in practical scenarios. OGA-032 exam consists of multiple-choice questions and requires the candidate to demonstrate their knowledge of the language and their ability to use it effectively in real-world situations.

The Open Group OGA-032 (ArchiMate 3 Part 2) Certification Exam is designed for professionals who have already passed the ArchiMate 3 Part 1 certification exam. ArchiMate 3 Part 2 Exam certification exam is a valuable credential for individuals who want to enhance their knowledge and skills in using the ArchiMate modeling language. ArchiMate 3 Part 2 Exam certification exam is recognized globally and is an excellent way for professionals to demonstrate their competence and proficiency in using the ArchiMate modeling language.

>> OGA-032 Exam Simulator <<

OGA-032 Examcollection, Valid OGA-032 Exam Camp

Achieving the The Open Group OGA-032 test certification can open up unlimited possibilities for your future career, if you are truly dedicated to jump out your career and willing to make additional learning and extra income. DumpsTests OGA-032 exam dumps can help you to overcome the difficulty—from understanding the necessary and basic knowledge to passing the ArchiMate 3 Foundation ArchiMate 3 Part 2 Exam exam test. The goal of The Open Group OGA-032 is to help our customers optimize their IT technology by providing convenient, high quality ArchiMate 3 Foundation exam prep training that they can rely on. The Open Group OGA-032 sure pass exam dumps empower the candidates to master their desired technologies for their own ArchiMate 3 Foundation exam test. Dear every one, passing the The Open Group OGA-032 actual test is an easy case for you.

The Open Group ArchiMate 3 Part 2 Exam Sample Questions (Q11-Q16):

NEW QUESTION #11

Please read this scenario prior to answering the question

ArchiSurance has decided to leverage its financial expertise by offering defined contribution retirement plans.

Each trading day, ArchiSurance submits consolidated mutual fund trading transactions to a stock exchange on behalf of its retirement plan participants.

The daily mutual fund trading cycle consists of four key processes: Transaction capture, pricing, trading and reconciliation. Transaction capture consists of two sub-processes: manual exchange and loans and distributions (L&D). For transaction capture, retirement plan participants use an online account management application to enter manual fund exchange transactions. For L&D, plan participants use a separate application to enter requests. The L&D application determines whether the request can be fulfilled based on the mutual fund balances held in each plan balances and a set of business rules. Each day's captured manual exchange transactions accumulate in a transaction database.

ArchiSurance contracts with a third-party information service to receive a file of mutual fund prices at the close of each trading day. The pricing application uses this file to convert captured transaction into trades, and then validates each trade against the mutual fund

balances held in each plan. The pricing application generates a trade file with the minimum number of trades necessary. The trading application sends this file to an external trading service.

When the trading application

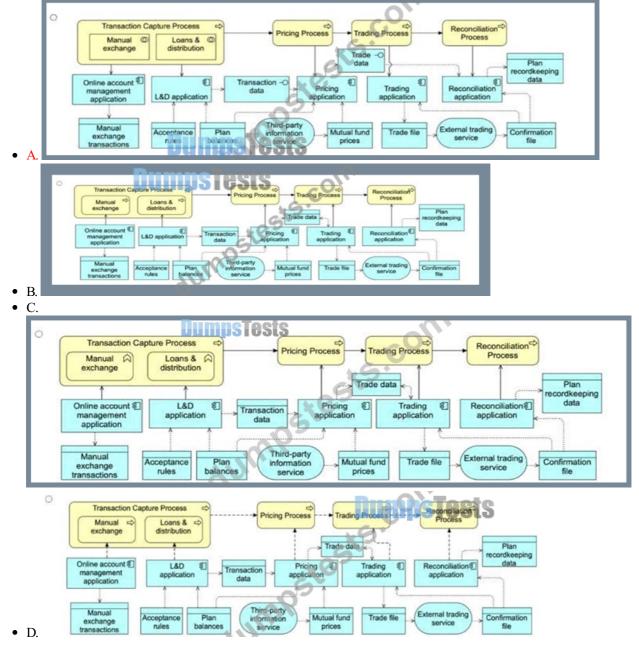

receives a confirmation file back from the trading service, it causes the reconciliation application to update the plan recordkeeping database.

The account management and L&D applications are hosted on separate application server clusters. Each cluster is a physically separate host that runs application server software on a set of virtualized hosts. All of these applications use a database server infrastructure that is hosted on another separate cluster of virtualized servers also on a dedicated physical host. The pricing, consolidation, trading and reconciliation applications, however, are batch applications that run on the ArchiSurance mainframe computer. All application hosts are connected via a converged data center network (DCN), which also connects them to a storage area network (SAN) as well as a wide area network (WAN) that is used to communicate with the external trading service. The SAN includes two physically separate storage arrays, one of which holds data for all databases, and another that holds data for all files.

Refer to the Scenario

The systems analysts would like to better understand the business processes and applications for daily fund trading. You have been asked to describe the business processes and sub-processes, the applications that they use, the data objects accessed by those applications, and the external application services that access some of those data objects.

Which of the following is the best answer? Note that you are not required to model the business actors/roles.

Explanation:

In this scenario, the goal is to model thebusiness processes, theirsub-processes, theapplicationssupporting these processes, and thedata objects these applications access. Additionally, external services that access some of these data objects need to be shown. This includes capturing the key processes and their dependencies, as well as understanding how the applications interact with data and external services.

Key ArchiMate® 3.2 Concepts Applied:

- * Business Processes and Sub-Processes:
- * Transaction Capture Process: Consists of two sub-processes:
- * Manual Exchange
- * Loans & Distribution (L&D)This process is responsible for capturing transactions from users through different applications (Online Account Management, L&D Application).
- * Pricing Process: This process uses the Mutual Fund Prices from a third-party service and the Plan Balances to validate and price trades.
- * Trading Process: This process generates a Trade Fileand interacts with an external Trading Service.
- * Reconciliation Process: This final process updates the Plan Recordkeeping Dataafter confirming trades from the External Trading Service
- * Applications and Data:
- * Online Account Management Application and Mana
- * Pricing Application: UsesMutual Fund PricesandTransaction Datato generateTrade Data.
- * Trading Application: SubmitsTrade Dataand receives aConfirmation Filefromthe external Trading Service.
- * Reconciliation Application: Uses the Confirmation Fileto update Plan Recordkeeping Data.
- * External Application Services:
- * Third-Party Information Service: ProvidesMutual Fund Prices.
- * External Trading Service: Processes trades and returns a Confirmation File.
- * Data Objects:
- * Transaction Data: Captured by the transaction capture processes.
- * Mutual Fund Prices: Received from the third-party service.
- * Trade Data: Generated by the pricing and trading applications.
- * Plan Recordkeeping Data: Updated by the reconciliation process after trade confirmation.

Why Option B is Correct:

- * Option Bprovides the most complete and accurate representation of the scenario. It captures the business processes(Transaction Capture, Pricing, Trading, Reconciliation) and their sub-processes, while showing the appropriate connections to the applications that support these processes.
- * It clearly depicts thedata objects(Transaction Data, Plan Balances, Trade File, Mutual Fund Prices, Plan Recordkeeping Data) and their flows between the processes and applications.
- * The model also includes the external services (Third-Party Information Service and External Trading Service), showing how these interact with the internal applications and data objects.
- * It accurately represents the flow of Trade Datafrom the Pricing Application to the Trading Application , and the use of Mutual Fund Prices by the Pricing Process.

Why Other Options Are Incorrect:

- * Option AandOption Dmiss some critical connections between the applications and the external services. They also lack clarity in how the data flows between the processes and applications.
- * Option Cdoes not adequately represent the interaction between the applications and the external services (e.g., Third-Party Information Service), which is a key requirement in this scenario.

Conclusion

Option Byrovides the best and most accurate description of the business processes, applications, data objects, and external services involved in ArchiSurance's daily fund trading operations, following ArchiMate® 3.2 standards for modeling business processes and applications.

NEW QUESTION # 12

Please read this scenario prior to answering the question

ArchiCar is a specialized company that focuses on manufacturing luxury electric cars and powertrain components, along with producing battery-charging equipment. With its own distribution network and showrooms, ArchiCar adopts a direct-to- customer sales model through online channels.

The manufacturing of ArchiCar's electric cars is carried out on fully automated assembly lines. Leveraging a cutting-edge manufacturing process, the company boasts an impressive ability to sell and deliver a vehicle within just one month from the time of order placement. Anticipating significant growth, the CEO has set ambitious plans to increase annual production from 100,000 to 500,000 vehicles within a three-year timeframe.

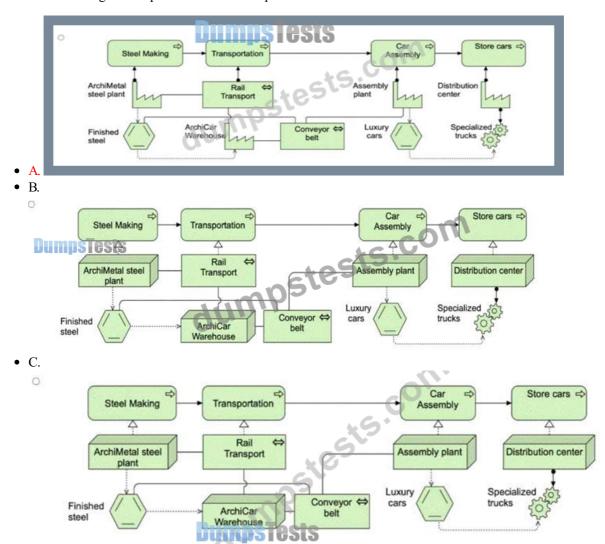

To ensure the highest quality standards, ArchiCar relies on locally manufactured finished steel from the renowned ArchiMetal plant. ArchiMetal specializes in lightweight steels that allow ArchiCar to achieve a reduced vehicle weight without compromising strength and crash performance. The finished steel is efficiently transported by rail to ArchiCar's production plant, where it is stored in a dedicated warehouse until required for the automated car assembly process. Conveyor belts facilitate the seamless transfer of the finished steel from the warehouse to the assembly plant.

At the ArchiCar assembly plant, an optimized and streamlined assembly process is implemented, resulting in the production of 12 vehicles per hour. Once assembled, the cars are transported to a nearby distribution center using specialized trucks.

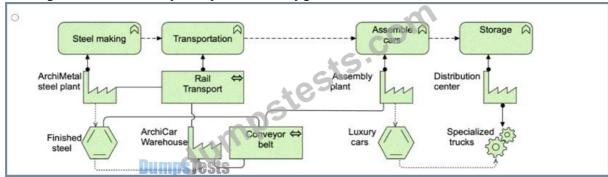

These vehicles are then stored at the distribution center until they are ready for delivery to their eagerly awaiting new owners. Refer to the Scenario

You are a consultant to the CIO. She has asked you to illustrate the end-to-end technology processes at ArchiCar from raw materials to assembled cars ready for delivery.

Which of the following answers provides the best description?

D. A diagram of a vehicle assembly Description automatically generated

Explanation:

In this scenario, the task is to model theend-to-end technology processesatArchiCar, showing how raw materials (finished steel) are processed through the company's manufacturing, transportation, and distribution system, ultimately resulting in fully assembled cars ready for delivery.

Key ArchiMate® 3.2 Concepts Applied:

- * Business Processes:
- * Steel Making: ArchiMetal manufactures finished steel, a key raw material for ArchiCar's production.
- * Transportation: The finished steel is transported by railfrom the ArchiMetal steel plantto ArchiCar's warehouse.
- * Storage: The finished steel is stored in the ArchiCar Warehouseuntil it is required for the assembly process.
- * Car Assembly:Theconveyor beltmoves the steel from the warehouse to theassembly plant, where cars are assembled on automated lines.
- * Transportation (Specialized Trucks):Once assembled, the cars are transported to adistribution centerusingspecialized trucks.
- * Storage (Distribution Center): The finished cars are stored in the distribution center, awaiting delivery to customers.
- * Application and Technology Components:
- * Conveyor Belt: The transfer of finished steel between the warehouse and assembly plant is automated via the conveyor belt.
- * Rail Transport and Specialized Trucks:Rail transport handles the movement of steel, and specialized trucks are used for car transportation to the distribution center.
- * End-to-End Flow:
- * The model needs to clearly depict the fullprocess flowfrom the production of steel, through its transportation and storage, to the automated assembly of luxury cars and their eventual transportation to the distribution center.
- * The relationships between processes (e.g., steel making, transportation, car assembly, and storage) must be clear and follow the logical flow of operations.

Why Option D is Correct:

- * Option Dprovides a clear and accurate representation of theend-to-end processas described in the scenario.
- * It begins with thesteel-making processat the ArchiMetal steel plantand follows through with the transportation of the finished steel to the warehouse by rail transport.
- * The process of moving steel via the conveyor beltfrom the warehouse to the assembly plant for car manufacturing is clearly depicted.
- * Once cars are assembled, they are transported to the distribution centerusing specialized trucks and are then stored until delivery, completing the end-to-end flow.
- * The relationships between processes and supporting components (e.g., conveyor belt, transportation methods) are clearly illustrated, following ArchiMate® standards.

Why Other Options Are Incorrect:

- * Option Ais incorrect because it misses some key elements of the process. It does not fully clarify the role of thewarehouseor how the finished steel is transported between locations.
- * Option Bmisrepresents the process flow, particularly the storage and assembly process. The connection between steel production and car assembly is not as clearly illustrated.
- * Option Calso lacks clarity in how the finished steel is moved from the warehouse to the assembly plant, and it does not accurately capture the flow of transportation and storage after car assembly.

Conclusion:

Option Dis the best answer because it provides the most complete and clear description of theend-to-end technology processesat ArchiCar, from raw materials (finished steel) to assembled luxury cars ready for delivery. It aligns well with the scenario and adheres to ArchiMate® 3.2 modeling standards, showing all necessary relationships between business processes and supporting components.

NEW QUESTION #13

Please read this scenario prior to answering the question

The ArchiSurance enterprise document management solution plays a crucial role in supporting a large number of document types and managing a high volume of document-based transactions each day. Given its business- critical nature, the document management solution is hosted redundantly across two geographically separate data center sites: Site A and Site B. Both sites are configured identically to ensure seamless operations.

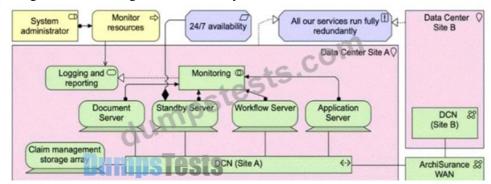

Each site has a highly available data center network (DCN) that connects to the resilient ArchiSurance wide area network (WAN). Each claim management server is connected to its respective site's DCN, forming a converged network that interconnects servers and storage arrays. A dedicated physical storage array is allocated to the claim management application within each DCN. Additionally, each site houses four powerful physical servers exclusively dedicated to the claim management application. Among these servers, one remains on standby at any given time, while the other three take on specific roles in hosting the document, workflow, and application engines.

The standby server is responsible for monitoring the behavior of the other servers, providing a logging and reporting service. The active servers regularly transmit data to facilitate this monitoring functionality. In the event of a server failure, the standby server steps in to perform resource reallocation, replacing the faulty server. However, this task requires manual intervention from a system

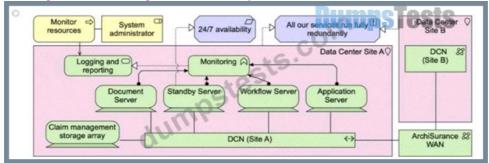

administrator to reconfigure the logging and reporting service to adapt to the new environment. Refer to the Scenario

The IT manager has asked you to model the hardware and networks that support the document management solution. This includes capturing the infrastructure components such as data center sites, servers, storage, and networks. Additionally, you are expected to outline the necessary functionality and services required to enable failover within a server cluster. Given that both data centers share an identical configuration, it is sufficient for Site B to only show the associated networking. Which of the following is the best answer?

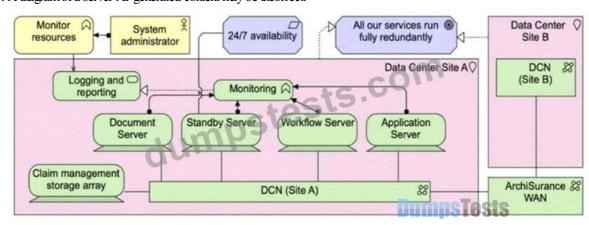

• A. A diagram of a server AI-generated content may be incorrect.

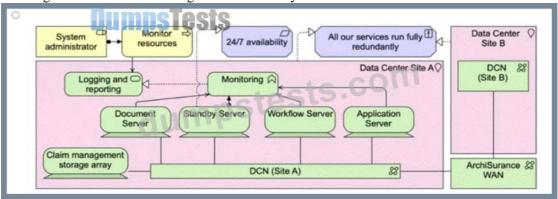

B. A diagram of a server AI-generated content may be incorrect.

• C. A diagram of a server AI-generated content may be incorrect.

• D. A diagram of a software server AI-generated content may be incorrect.

Answer: B

Explanation:

We need to identify the most accurate and complete model that represents:

- * Infrastructure Components- Includingdata centers, servers, storage arrays, and networks.
- * Failover Capabilities- Showing the standby server's rolein monitoring and switching functionality upon failure.
- * Redundant Setup- Ensuring therepresentation of both data centers (Site A and Site B), with Site B showing only networking.
- * Interconnectivity- Betweenservers, DCN, and WAN.

Why D is the Best Choice:

#All required infrastructure components are included, such as:

- * Physical servers(Document, Workflow, and Application Servers).
- * Standby Serverfor failover.
- * Claim Management Storage Array.
- * DCN (Data Center Network)forSite A and Site B.
- * ArchiSurance WANfor external connectivity.

#The Standby Server is correctly linked to logging, monitoring, and reporting, showing its role in monitoring and failover. #Networking is modeled properly:

- * Both Site A and Site B have a DCN, correctly interconnecting storage and servers.
- * Site B does not duplicate servers but represents networking, as per the scenario.

#Functionality of Failover is Modeled Accurately:

- * Monitoring and reporting services are depicted.
- * Manual intervention by a system administratoris present.

Why Not A, B, or C?

- * A:Does not fully capture thenetwork and storage relationshipsclearly.
- * B:Similar to A butmisses some essential network connections.
- * C:Incorrectfailover representation, and networking elements are not clearly depicted.

NEW QUESTION #14

Please read this scenario prior to answering the question

ArchiAir Catering Services (ACS) manages the catering services for ArchiAir, a leading airline. ACS is the sole catering supplier for all ArchiAir flights, and its services include full provisioning to the aircraft.

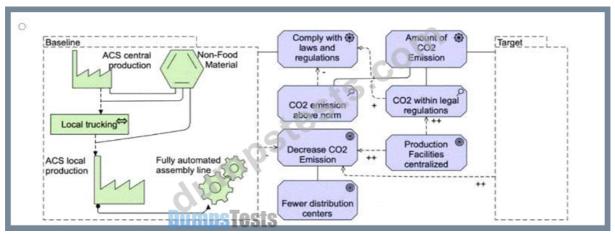

Currently, ACS operates three central production facilities, supported by distribution hubs and local pre-flight production facilities. The central production facilities are responsible for producing standardized non-food materials (such as plates, cutlery, and boxes), non-perishable food products, and key ingredients required by the local production facilities. These materials are subsequently distributed to the distribution hubs, which also serve as warehouses for the local production facilities. Within the local production facilities, multiple production machines are utilized, each featuring dedicated workstations for chefs and quality inspectors. Most of the local production facilities employ fully automated assembly lines, including built-in packaging stations. The loaded service trolleys are then transported to the aircraft using small lorries.

In response to investor pressure for ArchiAir to reduce its carbon footprint, the CEO of ACS has announced a plan to address this environmental concern. Subsequently, the Ministry of Social Welfare and Health has enacted a law mandating a reduction in CO2 emissions from all production facilities by the end of the year. Additionally, the airline's decision to raise ticket prices due to escalating fuel costs has led to a decrease in passenger numbers. This, in turn, impacts the volume of non-food materials required from ACS. An internal investigation has produced a report highlighting the potential benefits of centralizing production facilities and reducing the number of distribution centers. Such changes would result in lower CO2 emissions while still effectively meeting all the requirements of ArchiAir.

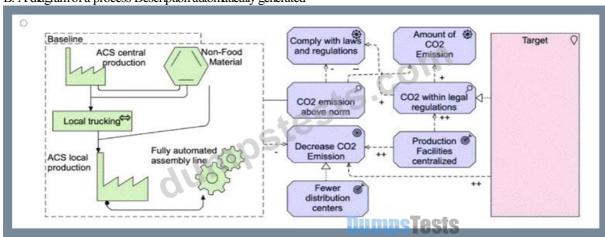

In addition to evaluating its supply chain to reduce its carbon footprint, ArchiAir is taking proactive steps to achieve a net zero carbon footprint for its IT operations. The Chief Information Officer (CIO) has identified two crucial requirements to support this endeavor. The first requirement involves switching to renewable energy for ACS facilities, which are often located in remote areas where traditional fuels are the primary source of energy. To align with sustainability goals, ArchiAir aims to transition these facilities to renewable energy sources. By utilizing renewable energy, ArchiAir can significantly reduce its reliance on traditional fuels and contribute to a greener operation. The second requirement pertains to the scalability of ArchiAir's IT operations, taking into account the airline's susceptibility to seasonal changes in demand. The CIO has observed notable disparities between sites that have additional blade servers and can scale their capacity, and sites that solely rely on the two mainframes housed in central facilities. A comprehensive report has revealed that the blade servers have a negligible impact on resource waste, whereas the mainframes are notorious for their power inefficiency, particularly during periods of low demand.

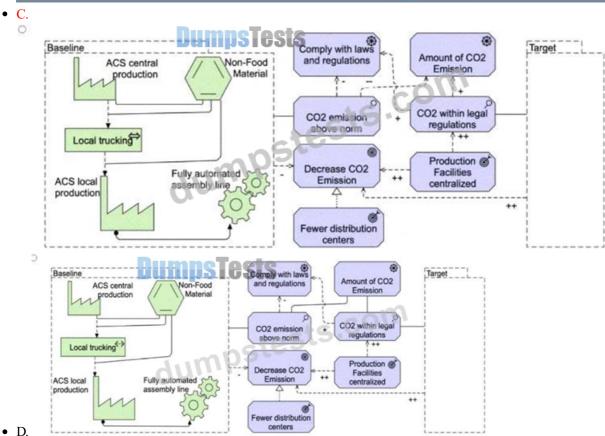

Refer to the Scenario

Which of the following answers best describes the proposed transition from baseline to target, including details of motivation for changes? Note that there is no need to show the details of the target state.

• B. A diagram of a process Description automatically generated

Answer: C

Explanation:

The correct answer isD, as it best describes the transition from the baseline to the target state, including the motivation for changes based on the scenario. Here's a detailed explanation of whyDis the most accurate model:

- * Baseline and Target:
- * The Baselinestate in all answers correctly depicts the current structure of ACS's operations, including the ACS Central Production, Local Trucking, ACS Local Production, and Fully Automated Assembly Line.
- * Dcaptures the essential transition from this baseline state to the target state by illustrating how the organization is aiming to decrease CO2 emissions, as required by the new regulations, and how they intend to centralize production facilities.
- * Motivation for Changes (Decrease in CO2 Emissions):
- * The CEO's plan to reduceCO2 emissions a critical driver for change. This is captured clearly in D, which shows the effects of Decreasing CO2 Emissions, Complying with Laws and Regulations, and Centralizing Production Facilities.
- * The Ministry of Social Welfare and Health's lawmandating CO2 reductions is accurately reflected in D, showing compliance as part of the motivation.
- * Dalso depicts the motivation to centralize production facilities, which helps reduce CO2 emissions and aligns with the internal report suggesting that fewer distribution centers can meet ACS's needs effectively.
- * Business and Environmental Factors:
- * The scenario also points out that passenger numbers have decreased due to rising ticket prices, which reduces the demand for non-food materials from ACS. This factor is linked to the centralization effort, as reducing the need for distribution centers can reduce costs while still meeting business needs.
- * Dreflects this by linkingFewer Distribution CentersandCentralized Production Facilities to both decreased emissions and operational efficiency.
- * Compliance with Laws and Regulations:
- * Dshows a clear connection between compliance with CO2 Emission Lawsand the Amount of CO2 Emissionsgenerated by ACS, which is an essential driver of change in the scenario.
- * The need to ensure that emissions are within the legal limit is modeled effectively inD, reflecting the scenario's requirement to meet regulatory expectations by the end of the year.
- * Centralization of Production:
- * The scenario suggests that centralizing production one way to reduce emissions and achieve operational efficiency. This is depicted clearly in D, where Production Facilities Centralized leads to both fewer distribution centers and a significant decrease in CO2 emissions.
- * Dlinks the motivation for fewer distribution centers to environmental sustainability (CO2 reduction) as well as operational improvements.
- * Comprehensive ArchiMate® 3 Compliance:
- * Daligns well with ArchiMate® 3 standards. It models the Motivation Elements such as goals (e.g., Decrease CO2 Emissions), assessments (e.g., CO2 Emission Above Norm), and requirements (e.
- g., Comply with Laws and Regulations) accurately.
- * The relationships between these motivation elements are correctly depicted using ArchiMate® connectors like influences and associations, ensuring that the transition from baseline to target is clear and fully compliant with ArchiMate® 3 best practices. Conclusion:AnswerDprovides the best representation of the proposed transition, focusing on the motivations for centralization and reduction of CO2 emissions. It accurately reflects the scenario's requirements, including legal compliance, environmental goals, and operational changes, all while following ArchiMate® 3 modeling standards.

NEW QUESTION #15

Please read this scenario prior to answering the question

ArchiCar has been a market leader in the premium priced luxury car sector for the last decade. Its product leadership strategy has brought superior products to market, and enabled ArchiCar to achieve premium prices for its cars. This strategy has been widely successful in the past, but recently competitors have been offering comparable products and taking significant market share. The governing board of ArchiCar has identified opportunities in emerging markets where the ArchiCar brand is associated with luxury and high performance products, but is thought to be too expensive for mass-market success.

Based on this assessment, the board has made the decision to setup a subsidiary company to mass-produce affordable cars locally. This will be achieved by focusing on a strategy of operational excellence. Such a strategy is ideal for such markets where customers value cost over other factors.

To facilitate this strategic transformation, the project has been divided into multiple phases within a five-year program. The initial phase, known as "Achieving Operational Excellence," is underway. The engineering team has begun devising an action plan to drive the necessary changes and outlining the technological conditions that must be met. The product architect has identified three current capabilities - industry-leading engineering, high-quality materials sourcing, and cutting-edge focussed R&D - along with their contributions to the new production philosophy.

Moving forward, it has been determined that two out of the three current capabilities require revision.

Materials sourcing needs to be adjusted to meet optimization demands, and R&D targets must align with future goals to enable affordable production.

Additionally, process engineering is introduced as a fourth capability to shift the company's focus from products to a process-oriented approach.

The Enterprise Architecture team has been tasked with migration planning, and identifying keywork packages and deliverables. They have identified two transition states between the current and future scenario. The first transition aims to adjust current capabilities, including revising the R&D approach and procurement strategy. The second transition aims to shift from a product-centric mindset to a process-focused approach and adjust materials sourcing accordingly.

It is important to consider existing

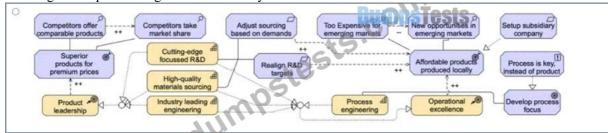

supplier contracts that cannot be immediately canceled during this process.

The Enterprise Architecture team has identified that the second transition must implement a process framework, in order to shift to a process focus and meet a number of requirements, including the requirement for end-to-end process thinking. As this requirement impacts procurement processes, it also impacts the procurement strategy.

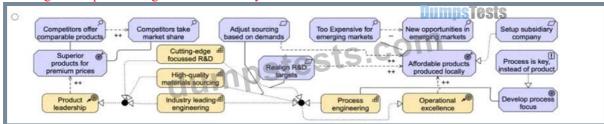

Refer to the Scenario

You have been tasked with modeling the current capabilities of ArchiCar, identifying the capabilities necessary for the company to achieve Operational Excellence, and showing the motivations behind these changes Which of the following models best answers this?

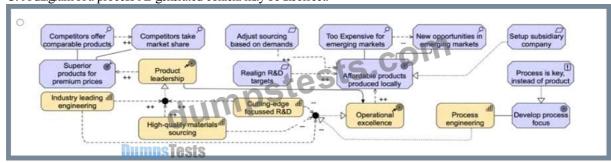

• A. A diagram of a process AI-generated content may be incorrect.

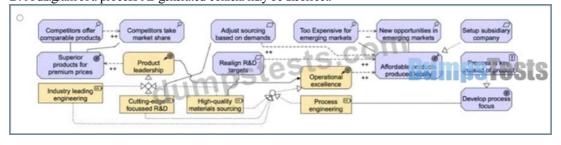

• B. A diagram of a process AI-generated content may be incorrect.

• C. A diagram of a process AI-generated content may be incorrect.

• D. A diagram of a process AI-generated content may be incorrect.

Answer: B

Explanation:

We need to find the model that best represents:

- * Current Capabilities- Industry-leading engineering, high-quality materials sourcing, and cutting-edge focused R&D.
- * Strategic Shift- Moving fromproduct leadershiptooperational excellenceto enter emerging markets.

- * Required Changes-
- * Adjusting R&D targets to support cost-effective production.
- * Revisingmaterials sourcingfor optimization.
- * Introducing process engineering to enable a process-oriented mindset.
- * Motivations Behind the Changes-
- * Competitor pressure.
- * Emerging market opportunities.
- * High costs limiting mass-market success.

Why D is the Best Choice:

#Includes all current and future capabilities- Shows the existing strengths ofengineering, R&D, and materials sourcingwhile introducing process engineering as required for operational excellence. #Clearly depicts the shift in strategy- From product leadership to operational excellence and the necessary transformations. #Captures stakeholder concerns and motivations-Including competition, cost concerns, and emerging market opportunities. #Represents dependencies and sequencing correctly-Reflecting how each capability change contributes to the transition states and ultimate business goals.

Why Not A, B, or C?

- * A:Does not properly represent the transition betweenproduct leadershipandoperational excellence.
- * B:Fails to clearly define the requiredcapability changesand motivations.
- * C:Lacks key relationships between strategy shifts and operational changes.

NEW QUESTION #16
