Three Main Formats of OmniStudio-Developer Exam Practice Material

The TestValid is one of the best platforms that has been helping the OmniStudio-Developer exam candidates for many years. Over this long time period the countless Salesforce Certified OmniStudio Developer OmniStudio-Developer exam candidates have passed their dream Salesforce OmniStudio-Developer Certification Exam and they have become certified Salesforce OmniStudio-Developer professionals. All the successful Salesforce OmniStudio-Developer certification professionals are doing jobs in small,

medium, and large size enterprises.

Salesforce OmniStudio-Developer Certification is ideal for developers, technical architects, and consultants who have experience working with Salesforce and want to expand their skills in the OmniStudio platform. Salesforce Certified OmniStudio Developer certification exam covers a wide range of topics, including data modeling, integrations, security, and deployment. Successful candidates will be able to design and build custom applications that meet the specific needs of their clients or organizations, integrating data from multiple sources and automating business processes. Salesforce Certified OmniStudio Developer certification demonstrates a commitment to continuous learning and professional development in the field of Salesforce development.

Salesforce Certified OmniStudio Developer Sample Questions (Q20-Q25):

NEW QUESTION # 20

A developer needs to retrieve data from an external system that stores policy data. The external system supports REST APIs to access and update the policies. Due to the volume of the policy data and peak hours of hours of business, calls to the REST APIs sometimes take longer than expected to response.

The developer creates an Integration Procedure to retrieve the policy data for use in an OmniScript.

Given the external system's known performance issues, which configuration should be used to implement the call to the external system?

Choose 2 answers

- A. Set the Timeout property on the HTTP Action in the Integration Procedure
- B. Check the Chainable checkbox on the integration procedure Action in the OmniScript
- C. Check the Chain on Step Check on the HTTP Action in the Integration Procedure
- D. Configure a Remote action with timeout settings of 120000

Answer: A,C

Explanation:

Explanation

Setting the Timeout property on the HTTP Action in the Integration Procedure allows the developer to specify how long to wait for a response from the external system before timing out. Checking the Chain on Step Check on the HTTP Action in the Integration Procedure allows the developer to chain multiple HTTP Actions together and execute them sequentially. Configuring a Remote action with timeout settings of 120000 is not necessary, as it is already done by default in OmniStudio. Checking the Chainable checkbox on the integration procedure Action in the OmniScript has no effect on calling an external system.

NEW QUESTION # 21

What two advantages does a DataRaptor Turbo Extract have over a standard DataRaptor Extract?

Choose 2 answers

- A. It populates data in PDF and DocuSign format
- B. It is easier to configure
- C. It supports complex field mappings
- D. It has better performance at runtime

Answer: B,D

NEW QUESTION # 22

An OmniScript displays data from an API using Integration Procedure, but some of the data is missing.

Which two configuration errors could cause this? Choose 2 answers

- A. The JSOW sent from the Integration Procedure Action does not match any of the Original Input for the Integration Procedure
- B. The missing data is trimmed in the Integration Procedure Action Response JSON Path.
- C. The element name for the missing data does not match the JSON node key in the Integration Procedure Response.
- D. The Integration Procedure Preview Input Parameters do not match the JSON sent from the OmniScript.

Answer: A,C

Explanation:

Explanation

The element name for the missing data must match the JSON node key in the Integration Procedure Response, otherwise the data will not be mapped correctly. The JSON sent from the Integration Procedure Action must match one of the Original Input for the Integration Procedure, otherwise the Integration Procedure will not execute properly. The Integration Procedure Preview Input Parameters and the Response JSON Path have no effect on displaying data in OmniScript.

NEW QUESTION # 23

Refer to the exhibit below. In this Integration Procedure structure, what Send JSON Path would you use to send the output of the ActionZ element to a Response Action?

- A. BlockX:BlockY:ActionAZ
- B. ActionZ:BlockY:BlockX
- C. BlockX.BlockYActionZ
- D. ActionZ:BlockY:BlockX

Answer: C

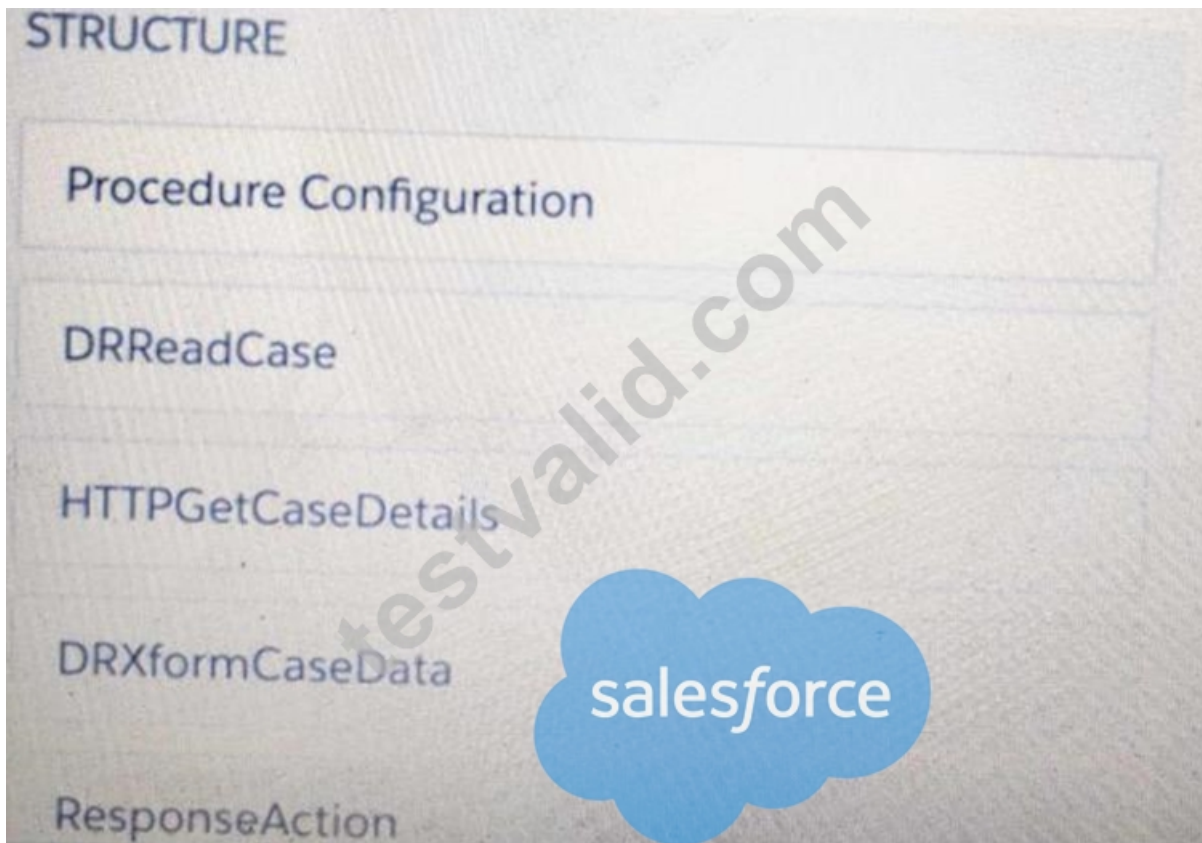

Explanation:

The Send JSON Path syntax for accessing an element from an Integration Procedure structure is BlockName.

ElementName. In this case, the BlockName is BlockX and the ElementName is ActionZ. The colon (:) is used to separate the input and output parameters, not the block and element names. The order of the block and element names should follow the hierarchy of the structure, from top to bottom.

NEW QUESTION # 24

Refer to the exhibit below. What is the merge code needed for this Integration Procedure structure to pass a CaseData node from the HTTP Action's output to the DataRaptor Transform Action?

- A. %HTTPGetDetails:CaseData%
- B. %DRXformCaseData: CaseData%
- C. {{ HTTPGetCaseDetails:CaseData }}
- D. {{ CaseData }}

Answer: B

NEW QUESTION # 25
