Developer –Professional Test Testking**

ExamcollectionPass are supposed to help you pass the exam smoothly. Don't worry about channels to the best OmniStudio-Developer study materials because we are the exactly best vendor in this field for more than ten years. And so many exam candidates admire our generosity of the OmniStudio-Developer Practice Questions offering help for them. Up to now, no one has ever challenged our leading position of this area. With our OmniStudio-Developer training guide, you will be doomed to pass the exam successfully.

Salesforce OmniStudio-Developer Certification Exam is a globally recognized certification exam for developers who specialize in building and deploying customized solutions using the Salesforce platform. Salesforce Certified OmniStudio Developer certification validates the skills and knowledge required to design, develop, and deploy complex applications using the OmniStudio platform. Salesforce Certified OmniStudio Developer certification exam ensures that developers possess the necessary expertise to build solutions that meet the unique business requirements of their clients.

Salesforce Certified OmniStudio Developer Sample Questions (Q59-Q64):

NEW QUESTION # 59

Refer to the exhibit.

Input Data	Output Data
ProductCode (Text) 	BasePrice (#)
Search column	Search column
ACC154	10.23
CAA876B	20.36
HRA320	12.99
HRA320B	13.99

All inputs to the Calculation Matrix are set correctly.

The Calculation Matrix has the following input:

```
{
  "input": {
    "ProductCode": "HRA320"
  }
}
```

What is the output?

- A. 12.99,13.99
- B. Null
- C. 13.99
- D. 12.99

Answer: D

NEW QUESTION # 60

Refer to the exhibit below. A developer has configured an Integration Procedure element with SEND /RESPONSE TRANSFORMATIONS as shown.

Alternatively, how could the developer configure Additional Input to send exactly the same data? Assume that the developer checked Send Only Additional Input.

SEND/RESPONSE TRANSFORMATIONS

Send JSON Path ⓘ: DRExtractAction:Account

Send JSON Node ⓘ: SecondaryAccount

Response JSON Path ⓘ:

Response JSON Node ⓘ:

• A.

Key	Value
%DRExtractAction:Account%	SecondaryAccount

• B.

Key	Value
SecondaryAccount	DRExtractAction:Account

• C.

Key	Value
DRExtractAction:Account	SecondaryAccount

• D.

Key	Value
SecondaryAccount	%DRExtractAction:Account%

Answer: B

Explanation:

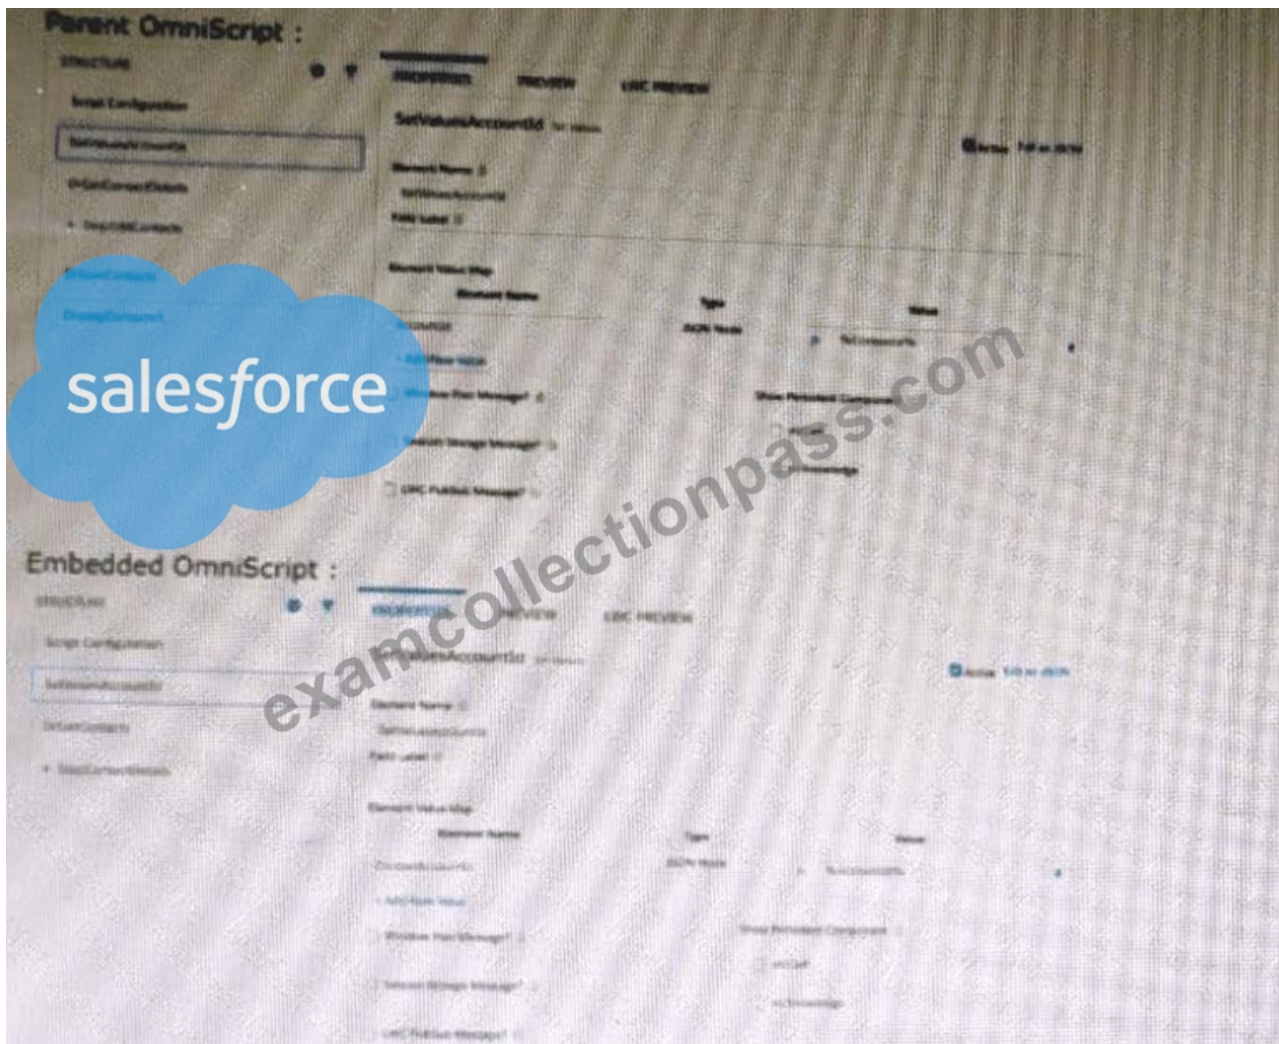

The Additional Input property allows the developer to specify additional input parameters to be sent to the Integration Procedure element. The input parameters can be specified as a JSON object or as a list of key- value pairs. If the developer checked Send Only Additional Input, then only the input parameters specified in Additional Input are sent, and the SEND/RESPONSE TRANSFORMATIONS are ignored. Therefore, the developer needs to specify the same input parameters as in the SEND/RESPONSE TRANSFORMATIONS in Additional Input. Option C shows how to do this using a JSON object with two properties: "DBExtractAction: Account" and "DBExtractAction:SecondaryAccount". The values of these properties are the same as in the SEND/RESPONSE TRANSFORMATIONS.

NEW QUESTION # 61

A customer sets up two LWC OmniScripts, one embedded into another. AccountId is set in a Set Values element in the parent OmniScript. The AccountId set in the parent OmniScript is used to set another Set values element ContextAccountId in the embedded OmniScript. The embedded OmniScript is activated.

While previewing the OmniScript flow from the parent, it is found that Account I set correct in the parent OmniScript. However, ContextAccount in the embedded OmniScript is not set with the Accountid from parent OmniScript. On previewing the embedded OmniScript individually. It is found that ContextAccountId is set correctly.

What is the reason for this? Refer to the exhibit below.

- A. The WLC PubSub Message flag in the Set Values action of the parent OmniScript has not been set.
- B. Both parent and embedded OmniScripts have the same element name for the Set Values element.
- C. The flag passData.JSON in the parent OmniScript is not configured correctly.
- D. A developer failed to include a Navigate Action Element to pass data from the parent OmniScript.

Answer: A

Explanation:

The LWC PubSub Message flag in the Set Values action of the parent OmniScript enables the parent OmniScript to send data to the embedded OmniScript using a custom event. If this flag is not set, the data will not be passed to the embedded OmniScript.

NEW QUESTION # 62

A developer creates a FlexCard that displays a contact's mailing address and passes the contact's postal code to a child FlexCard. When configuration text elements in the child FlexCard, what syntax should a developer use to refer to the contact's postal code?

- A. {Parent.postalcode}
- B. {Params.postalcode}
- C. {Records.postalcode}
- D. {Postalcode}

Answer: B

Explanation:

Explanation

The Params node contains the data that is passed from the parent FlexCard to the child FlexCard. The developer should use {Params.postalcode} to refer to the contact's postal code in the child FlexCard.

NEW QUESTION # 63

Refer to the exhibit below. What JSON code correctly represents the step in the OmniScript Structure panel shown?

```
"Step1": {  
  "Block1": {  
    "Text1": "Text",  
    "Telephone1": "1234567890",  
    "Block2": {  
      "Checkbox1": false  
    }  
  },  
  "Block3": {  
    "Multi-select1": "Value A;Value B"  
  }  
}
```

- A. }

```
"Step1": {  
  "Block1": {  
    "Text1": "Text "  
  },  
  "Block2": {  
    "Telephone1": "1234567890 ",  
    "Checkbox1": false,  
    "Block3": {  
      "Multi - select1": "Value A;Value B "  
    }  
  }  
}
```

- B.
- C.

The screenshot shows the OmniScript Structure panel for 'Step 1'. It displays a tree view with 'Block1' and 'Block2'. 'Block1' contains 'Text1' and 'Telephone1' fields. 'Block2' contains a 'Checkbox1' and a 'Block3' which contains a 'Multi-select1' field.

```
"Step1": {  
  "Block1": {  
    "Text1": "Text",  
    "Telephone1": "1234567890",  
  },  
  "Block2": {  
    "Checkbox1": false,  
    "Block3": {  
      "Multi-select1": "Value A;Value B"  
    }  
  }  
}
```

- D.

Answer: A

Explanation:

The JSON code correctly represents the step in the OmniScript Structure panel shown. The JSON code has the following

* The value property is an empty string, which indicates that this text field has no default value.
