Scrum SAFe Practitioner Exam (6.0) Sample Questions (Q147-Q152):

NEW QUESTION # 147

What is one element teams present during the draft plan review?

- A. Planned business value
- B. Milestones
- C. ART PI risks
- **D. Iteration goals**

Answer: D

Explanation:

During the draft plan review, teams present their preliminary plans for the upcoming PI, including their iteration goals, capacity and load, and risks and impediments¹. Iteration goals are a set of SMART objectives that provide a clear vision and alignment for each iteration². They also help teams communicate their progress and dependencies to other teams and stakeholders during the PI planning event³. NEW QUESTION # 148

What is the typical timebox in which to complete a User Story?

- A. One month
- B. One year
- C. One PI
- **D. One iteration**

Answer: D

Explanation:

A User Story is a short description of a piece of functionality that delivers value to a customer or stakeholder.

It is typically written from the perspective of an end user and follows the format: "As a <role>, I want

<something>, so that <benefit>". User Stories are the primary elements of the Team Backlog and are used to plan and execute the Iteration. User Stories should be small enough to be completed within one Iteration, which is usually two weeks long. If a User Story is too large or complex, it should be split into smaller stories that can fit within the Iteration timebox. This ensures that the team can deliver value frequently and receive feedback quickly. References: SAFe for Teams Student Workbook: materials and exercises from Lesson 3; v6.

NEW QUESTION # 149

What is one key purpose of DevOps?

- A. DevOps enables continuous release by building a scalable Continuous Delivery Pipeline
- B. DevOps focuses on automating the delivery pipeline to reduce transaction cost

- C. DevOps focuses on a set of practices applied to large systems
- D. DevOps joins development & operations to enable continuous delivery

Answer: D

Explanation:

= DevOps is a mindset, culture, and set of technical practices that supports the integration, automation, and collaboration needed to effectively develop and operate a solution. DevOps joins development and operations to enable continuous delivery, which means delivering value to customers in the shortest sustainable lead time. Continuous delivery is achieved by creating a Continuous Delivery Pipeline (CDP), which is a high-performance innovation engine that consists of four elements: Continuous Exploration, Continuous Integration, Continuous Deployment, and Release on Demand. DevOps also helps to improve the quality, reliability, and security of the solution by applying practices such as testing, monitoring, and feedback throughout the CDP. NEW QUESTION # 150

In the ART Kanban some steps have work in process (WIP) limits. Why is this necessary?

- A. To reduce handoffs and dependencies
- B. To enable Continuous Deployment
- C. To support multitasking
- D. To ensure large queues are not forming

Answer: D

Explanation:

= WIP limits are necessary in the ART Kanban to ensure large queues are not forming, which would slow down the flow of value and increase the lead time. WIP limits are a way of applying the Lean principle of reducing waste and optimizing the system for the whole. By limiting the amount of work that can be in progress at any stage of the Kanban system, the ART can balance the demand and capacity, avoid overloading the system, and focus on completing the work rather than starting new work. WIP limits also help to expose bottlenecks, dependencies, and impediments that need to be resolved to improve the flow efficiency and quality of the work. NEW QUESTION # 151

Which statement applies to uncommitted objectives?

- A. They are included in the commitment
- B. They are counted when calculating load
- C. They are items the team has high confidence in
- D. They are extra things teams can do if they have time

Answer: D

Explanation:

Uncommitted objectives are used to identify work that can be variable within the scope of a PI. The work is planned, but the outcome is not certain. Teams can use uncommitted objectives whenever there is low confidence in meeting the objective. They are not included in the team's commitment or counted against teams in the ART predictability measure. They are extra things teams can do if they have time and capacity, but they will not be penalized if not achieved.
