2V0-16.25 Well Prep & 2V0-16.25 Exam Overview

To help you prepare well, we offer three formats of our 2V0-16.25 exam product. These formats include VMware 2V0-16.25 PDF dumps, Desktop Practice Tests, and web-based VMware vSphere Foundation 9.0 Administrator (2V0-16.25) practice test software. Our efficient customer service is available 24/7 to support you in case of trouble while using our 2V0-16.25 Exam Dumps. Check out the features of our formats.

VMware vSphere Foundation 9.0 Administrator Sample Questions (Q19-Q24):

NEW QUESTION # 19

The security team requests the ability to log into VMware vCenter and review datacenter, cluster and network configurations. The following details are provided:

- * The security team is not authorized to make any changes to the environment.
- * Each user must login with unique credentials.

What steps should the administrator perform to grant access to the security team?

- A. Share the password for 'administrator@vsphere.local' with the security team.
- B. Create a group for the security team, add the users to the group, and assign the group the Network Administrator role.
- C. Create a group for the security team, add the users to the group, and assign the group the Read-Only role.
- D. Create a security user, assign the user the Read-Only role, share the credentials with the security team.

Answer: C

Explanation:

The security team requires visibility into vCenter configurations but must not make changes.

* Best practice is to create an Active Directory or vCenter group, add the security users, and assign them the Read-Only role at the datacenter/cluster/network level.

* This ensures each user logs in with unique credentials, maintaining accountability.

Why others are incorrect:

* A. Share administrator@vsphere.local password# Violates security best practices.

* B. Create a single user and share credentials# Still insecure, lacks unique audit trails.

* C. Assign Network Administrator role# Grants configuration permissions, not allowed.

NEW QUESTION # 20

What are the two methods to add a widget to a VMware Cloud Foundation (VCF) Operations for Logs dashboard? (Choose two.)

- A. Clone the widget from an existing dashboard.
- **B. Create the widget in Explore Logs and click Add to Dashboard.**
- **C. Drag and drop the widget in the dashboard design pane.**
- D. Open Management Pack Builder and clone the widget.
- E. Import the widget in the dashboard design pane.

Answer: B,C

Explanation:

Two supported methods exist for adding widgets to VCF Operations for Logs dashboards:

* From Explore Logs- Create a widget (e.g., query result) and select Add to Dashboard. (B)

* Dashboard Design Pane- Use the design interface to drag and drop widgets. (C) Other options:

* A. Clone widget from existing dashboard# Not a supported method.

* D. Import widget in design pane# Import is for dashboards, not individual widgets.

* E. Management Pack Builder# Not related to Logs dashboard widgets.

NEW QUESTION # 21

Which component must be added after an initial deployment of VMware vSphere Foundation (VVF) to provide a central location for logs collection?

- A. VCF Operations
- B. VCF Operations for Networks
- C. Fleet Manager
- **D. VCF Operations for Logs**

Answer: D

Explanation:

After deploying vSphere Foundation, to centralize log collection and analysis, you must add:

* VCF Operations for Logs, which provides log ingestion, alerting, and centralized troubleshooting.

Other options:

* B. VCF Operations# Focuses on performance/capacity, not log collection.

* C. VCF Operations for Networks# Focuses on networking insights.

* D. Fleet Manager# Used for multi-instance management, not logging.

NEW QUESTION # 22

An administrator is tasked with setting up pricing for their VMware vSphere Foundation (VVF) environment. The accounting team has decided to charge users in 't-shirt sizes' for vCPU in the following method:

- * Small (1-2 vCPU)
- * Medium (3-4 vCPU)
- * Large (5-8 vCPU)

Which rate method is used for this configuration?

- **A. Base rate slabs.**
- B. Base rate CPU per GHz.
- C. Base rate storage per GB.
- D. Base rate CPU per vCPU.

Answer: A

Explanation:

The t-shirt sizing model (Small, Medium, Large) for vCPU allocation is an example of slab-based pricing.

- * Base rate slabs allow administrators to define different ranges (slabs) of resource usage with associated rates.
- * In this case, vCPUs are grouped into ranges (1-2, 3-4, 5-8), and charges are applied per slab.

Other options:

- * A. Base rate storage per GB# Applies to storage, not CPU.
- * C. Base rate CPU per GHz# Charges by GHz usage, not vCPU count.
- * D. Base rate CPU per vCPU# Flat per vCPU, no slab/tier-based flexibility.

NEW QUESTION # 23

A virtual machine (VM) owner has requested to move a VM from one cluster to another. The following information has been provided:

- * The VM cannot have downtime during the transfer.
- * The same network is present on both clusters.
- * The datastore that the VM is currently on is not present in the destination cluster.

What step should the administrator perform to move the VM?

- A. Inform the owner the VM cannot be moved to the new cluster.
- B. Backup the VM and restore it to the new cluster.
- **C. Perform a vMotion with Storage vMotion to the new cluster.**
- D. Perform a vMotion of the VM to the new cluster.

Answer: C

Explanation:

To move a VM to another cluster:

- * Requirement: Zero downtime# Requires vMotion.
- * Challenge: Datastore not shared# Requires Storage vMotion.
- * The combined operation, Cross-Cluster vMotion with Storage vMotion, allows moving compute and storage at the same time, with no downtime.

Other options:

- * A. vMotion only# Requires shared datastore, not available here.
- * B. Backup/restore# Causes downtime, not acceptable.
- * D. Cannot be moved# Incorrect; vMotion + Storage vMotion supports this.
