

Online AZ-700 Training Materials - Exam AZ-700 Labs

BONUS!!! Download part of ITExamReview AZ-700 dumps for free: <https://drive.google.com/open?id=1agW1jdUHMxp2EwCtrALJ7mDJ041uwM6j>

You should make progress to get what you want and move fast if you are a man with ambition. At the same time you will find that a wonderful aid will shorten your time greatly. To get the AZ-700 certification is considered as the most direct-viewing way to make big change in your professional profile, and we are the exact AZ-700 Exam Braindumps vendor. If you have a try on our free demos of our AZ-700 study guide, you will choose us!

Microsoft AZ-700 certification exam is designed to test the skills and knowledge of IT professionals in designing and implementing networking solutions on the Microsoft Azure platform. Designing and Implementing Microsoft Azure Networking Solutions certification is ideal for those looking to validate their expertise in networking concepts and cloud computing on the Azure platform. AZ-700 Exam is intended for IT professionals with experience in Azure networking and administration.

100% Pass Microsoft Marvelous Online AZ-700 Training Materials

One of the major features provided by Microsoft is that it will provide you with free Microsoft AZ-700 actual questions updates for 365 days after the purchase of our product. If you work hard with our Microsoft AZ-700 Exam Practice material, nothing can stop you from cracking the test on the first endeavor.

Microsoft Designing and Implementing Microsoft Azure Networking Solutions Sample Questions (Q195-Q200):

NEW QUESTION # 195

You have two Azure virtual networks named VNet1 and VNet2 that are peered with each other. VNet1 hosts 10 virtual machines that contain web servers. VNet2 hosts five virtual machines that contain database servers. You need to configure a security solution that meets the following requirements:

- Ensures that the database servers can accept connections only from the web servers
- Ensures that the web servers can initiate connections only to the database servers
- Ensures that all network security groups (NSGs) are associated only with subnets
- Use application security groups to implement the solution

What is the minimum number of application security groups required?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

NEW QUESTION # 196

You have an internal Basic Azure Load Balancer named LB1 that has two frontend IP addresses. The backend pool of LB1 contains two Azure virtual machines named VM1 and VM2. You need to configure the rules on LB1 as shown in the following table.

Rule	Frontend IP address	Protocol	ILB1 port	Destination	VM port
1	65.52.0.1	TCP	80	IP address of the NIC of VM1 and VM2	80
2	65.52.0.2	TCP	80	IP address of the NIC of VM1 and VM2	80

What should you do for each rule?

- A. Set Session persistence to Enabled.
- B. Disable Floating IP.
- C. Set Session persistence to Disabled.
- **D. Enable Floating IP.**

Answer: D

Explanation:

If you want to reuse same port for both load balancing rules then Floating IP needs to be enabled.
<https://learn.microsoft.com/en-us/azure/load-balancer/load-balancer-multivip-overview#rule-type-2-backend-port-reuse-by-using-floating-ip>

NEW QUESTION # 197

You need to provide connectivity to storage1. The solution must meet the PaaS networking requirements and the business requirements.

What should you include in the solution?

- **A. a service endpoint**
- B. a private endpoint
- C. Azure Traffic Manager
- D. Azure Front Door

Answer: A

Explanation:

Topic 2, Contoso Case Study 2

Overview

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Existing Environment:

Azure Network Infrastructure

Contoso has an Azure Active Directory (Azure AD) tenant named contoso.com.

The Azure subscription contains the virtual networks shown in the following table.

Name	Resource group	IP address space	Location	Peered with
Vnet1	RG1	10.1.0.0/16	West US	Vnet2, Vnet3
Vnet2	RG1	172.16.0.0/16	Central US	Vnet1, Vnet3, Vnet4
Vnet3	RG2	192.168.0.0/16	Central US	Vnet1, Vnet2
Vnet4	RG2	10.10.0.0/16	West US	Vnet2
Vnet5	RG3	10.20.0.0/16	East US	None

Vnet1 contains a virtual network gateway named GW1.

Azure Virtual Machines

The Azure subscription contains virtual machines that run Windows Server 2019 as shown in the following table.

Name	Connected to	Network security group (NSG)
VM1	Vnet1/Subnet1	NSG1
VM2	Vnet1/Subnet2	NSG2
VM3	Vnet2/Default	NSG3
VM4	Vnet3/Default	NSG4
VM5	Vnet4/SubnetA	NSG5

The NSGs are associated to the network interfaces on the virtual machines. Each NSG has one custom security rule that allows RDP connections from the internet. The firewall on each virtual machine allows ICMP traffic.

An application security group named ASG1 is associated to the network interface of VM1.

Azure Private DNS Zones

The Azure subscription contains the Azure private DNS zones shown in the following table.

Name	Location
zone1.contoso.com	Central US
zone2.contoso.com	West US

Zone1.contoso.com has the virtual network links shown in the following table.

Name	Virtual network	Auto registration
Link1	Vnet2	No
Link2	Vnet3	Yes

Other Azure Resources

The Azure subscription contains additional resources as shown in the following table.

Name	Type	Location
DB1	Azure SQL Database	West US
storage1	Azure Storage account	West US
Registry1	Azure Container Registry	Central US
KeyVault1	Azure Key Vault	Central US

Requirements:

Virtual Network Requirements

Contoso has the following virtual networks requirements:

* Create a virtual network named Vnet6 in West US that will contain the following resources and configurations:

Two container groups that connect to Vnet6

Three virtual machines that connect to Vnet6

Allow VPN connections to be established to Vnet6

Allow the resources in Vnet6 to access KeyVault1, DB1, and Vnet1 over the Microsoft backbone network

* The virtual machines in Vnet4 and Vnet5 must be able to communicate over the Microsoft backbone network.

* A virtual machine named VM-Analyze will be deployed to Subnet1. VM-Analyze must inspect the outbound network traffic from Subnet2 to the internet.

Network Security Requirements

Contoso has the following network security requirements:

* Configure Azure Active Directory (Azure AD) authentication for Point-to-Site (P2S) VPN users.

* Create an NSG named NSG10 that will be associated to Vnet1/Subnet1 and will have the custom inbound security rules shown in the following table.

* Create an NSG named NSG11 that will be associated to Vnet1/Subnet2 and will have the custom outbound security rules shown in the following table.

Explanation:

NEW QUESTION # 199

You have an on-premises DNS server named Server1 that hosts a primary DNS zone named fabrikam.com.

You have an Azure subscription that contains the resources shown in the following table.

Name	Type	Description
VNet1	Virtual network	In the US West Azure region
VNet2	Virtual network	In the US West Azure region
VNet3	Virtual network	In the West Europe Azure region
VNet4	Virtual network	In the West Europe Azure region
contoso.com	Azure Private DNS zone	In the West Europe Azure region and linked to VNet1, VNet2, VNet3, and VNet4

Users on the on-premises network access resources on all the virtual networks by using a Site-to-Site (S2S) VPN. You need to deploy an Azure DNS Private Resolver solution that meets the following requirements:

- * Resources connected to the virtual networks must be able to resolve DNS names for fabrikam.com.
- * Server1 must be able to resolve the DNS names of the resources in contoso.com.
- * The solution must minimize costs and administrative effort.

What is the minimum number of resolvers you should deploy?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

NEW QUESTION # 200

.....

Perhaps you do not understand. Anyway, what I want to tell you that our AZ-700 exam questions can really help you pass the exam faster. Imagine how much chance you will get on your career path after obtaining an internationally certified AZ-700 certificate! You will get a better job or get a big rise on the position as well as the salary. And we can claim that if you study with our AZ-700 study materials for 20 to 30 hours, you will pass the exam with ease.
