300-215 Study Tool Will Be Valuable Investment with Reasonable Prices - Dumpleader

To meet the needs of users, and to keep up with the trend of the examination outline, our products will provide customers with larest version of our products. Our company's experts are daily testing our 300-215 study guide for timely updates. So we solemnly promise the users, our products make every effort to provide our users with the latest learning materials. As long as the users choose

to purchase our 300-215 Exam Dumps, there is no doubt that he will enjoy the advantages of the most powerful update. Most importantly, these continuously updated systems are completely free to users. As long as our 300-215 learning material updated, users will receive the most recent information from our 300-215 learning materials. So, buy our products immediately!

Cisco Conducting Forensic Analysis & Incident Response Using Cisco Technologies for CyberOps Sample Questions (Q46-Q51):

NEW QUESTION # 46
Refer to the exhibit.

```
[**] [1:2008186:5] ET SCAN DirBuster Web App Scan in Progress [**]

[Classification: Web Application Attack] [Priority: 1]

04/20-13:02:21.250000 192.168.100.100:51022 -> 192.168.50.50:80

TCP TTL:63 TOS:0x0 ID:20054 IpLen: 20 DgmLen:342 DF

***AP*** Seq: 0x369FB652 Ack: 0x9CF06FD8 Win: 0xFA60 TcpLen: 32

[Xref => http://doc.emergingthreats.net/2008186] [Xref => http://owasp.org]
```

According to the SNORT alert, what is the attacker performing?

- A. brute-force attack against directories and files on the target webserver
- B. XSS attack against the target webserver
- C. brute-force attack against the web application user accounts
- D. SQL injection attack against the target webserver

Answer: A

Explanation:
The alert clearly identifies ET SCAN DirBuster Web App Scan in Progress, referencingSID 2008186, which is a Snort signature that specifically detectsDirBusteractivity. DirBuster is a well-known tool used for brute- forcing hidden directories and files on web servers.
The Cisco CyberOps Associate guide and OWASP both identifydirectory brute-forcingas a reconnaissance technique to find unprotected or misconfigured endpoints on web applications, typically prior to launching deeper attacks.
Therefore, the correct interpretation of the alert is:
C). brute-force attack against directories and files on the target webserver.

NEW QUESTION # 47
A threat actor attempts to avoid detection by turning data into a code that shifts numbers to the right four times. Which anti-forensics technique is being used?

- A. obfuscation
- B. tunneling
- C. poisoning
- D. encryption

Answer: A

Explanation:
Reference:
#:~:text=Obfuscation%20of%20character%20strings%20is,data%20when%20the%20code%20executes.

NEW QUESTION # 48
What describes the first step in performing a forensic analysis of infrastructure network devices?

- A. resetting the device to factory settings and analyzing the difference
- B. initiating an immediate full system scan
- C. producing an accurate, forensic-grade duplicate of the device's data
- D. immediately disconnecting the device from the network

Answer: C

Explanation:
The first and most important step in forensic analysis is to preserve the integrity of the data. According to best practices outlined in the Cisco CyberOps Associate guide and NIST 800-86, forensic investigators must first produce a forensically sound, bit-by-bit copy of the system's data (i.e., imaging). This enables analysis to occur without altering the original evidence, which is essential for legal admissibility and maintaining the chain of custody.

NEW QUESTION # 49
A threat intelligence report identifies an outbreak of a new ransomware strain spreading via phishing emails that contain malicious URLs. A compromised cloud service provider, XYZCloud, is managing the SMTP servers that are sending the phishing emails. A security analyst reviews the potential phishing emails and identifies that the email is coming from XYZCloud. The user has not clicked the embedded malicious URL.
What is the next step that the security analyst should take to identify risk to the organization?

- A. Create a detailed incident report and share it with top management.
- B. Reset the reporting user's account and enable multifactor authentication.
- C. Find any other emails coming from the IP address ranges that are managed by XYZCloud.
- D. Delete email from user mailboxes and update the incident ticket with lessons learned.

Answer: C

Explanation:
Since the phishing email originates from a known compromised cloud provider (XYZCloud), the correct immediate action for the security analyst is to determine the broader scope of exposure. This involves checking whether other users in the organization received similar emails from the same potentially malicious source. Therefore, querying for emails from theIP address rangesorSMTP domainslinked to XYZCloud is essential for identifying other possible attack vectors.
This step aligns with the containment phase of the incident response lifecycle, as outlined in theCyberOps Technologies (CBRFIR) 300-215 study guide, where threat hunting and log analysis are used to determine the extent of compromise and prevent lateral movement or further exposure. Only after the scope is understood should remediation or reporting actions follow.
Reference:CyberOps Technologies (CBRFIR) 300-215 study guide, Chapter: Email-Based Threats and Containment Strategy during Incident Response.

NEW QUESTION # 50
An employee receives an email from a "trusted" person containing a hyperlink that is malvertising. The employee clicks the link and the malware downloads. An information analyst observes an alert at the SIEM and engages the cybersecurity team to conduct an analysis of this incident in accordance with the incident response plan. Which event detail should be included in this root cause analysis?

- A. alarm raised by the SIEM
- B. alert identified by the cybersecurity team
- C. information from the email header
- D. phishing email sent to the victim

Answer: A

NEW QUESTION # 51
