ChromeOS-Administrator Certification Exam | ChromeOS-Administrator New Dumps

If you are working all the time, and you hardly find any time to prepare for the Google ChromeOS-Administrator exam, then PassExamDumps present the smart way to Google ChromeOS-Administrator exam prep for the exam. You can always prepare for the ChromeOS-Administrator test whenever you find free time with the help of our ChromeOS-Administrator Pdf Dumps. We have curated all the ChromeOS-Administrator questions and answers that you can view the exam Google ChromeOS-Administrator brain dumps and prepare for the ChromeOS-Administrator exam. We guarantee that you will be able to pass the ChromeOS-Administrator in the first attempt.

Google Professional ChromeOS Administrator Exam Sample Questions (Q14-Q19):

NEW QUESTION # 14

You have a number of applications that you rely upon. You want to ensure that your applications continue to run smoothly with each new version of Chrome. What should you do?

- A. Advise them to take no action All applications are automatically supported on the latest version of Chrome
- **B. Implement a QA strategy and put their IT group and 5% of users on the beta channel of ChromeOS so they can find and report bugs early for upcoming Chrome releases**
- C. Ask users to provide feedback on the applications within a week of a new Chrome release
- D. Always install the latest version of those applications when they become available so they are always compatible with the latest version of Chrome

Answer: B

Explanation:

Option D is the most proactive and comprehensive approach to ensure application compatibility with new Chrome versions. Here's why:

* QA Strategy: Implementing a formal Quality Assurance (QA) process allows for systematic testing of applications on new Chrome versions before they are released to all users. This helps identify and address compatibility issues early on.

* Beta Channel Testing: Enrolling a subset of users (e.g., IT group and 5% of users) in the beta channel gives them access to pre-release versions of ChromeOS. This allows them to test applications in a real-world environment and report any bugs or issues before the stable release.

* Early Bug Reporting: By identifying and reporting bugs early, you provide developers with valuable feedback and time to fix issues before the official release. This ensures a smoother transition for all users when the new Chrome version is deployed.

Why other options are incorrect:

* A: User feedback is valuable, but it's reactive and may not catch all issues before they impact a larger user base.

* B: Assuming all applications are automatically compatible is risky and can lead to unexpected problems.

* C: While keeping applications updated is good practice, it doesn't guarantee compatibility with new Chrome versions, as changes in Chrome itself can cause issues.

NEW QUESTION # 15

Your hardware OEM issues a recall for a safety issue. You need to deprovision devices from management before returning to the OEM. They will replace your existing ChromeOS devices with a different model.

Which option should you choose when deprovisioning to make sure you can reuse your Chrome Education/Enterprise Upgrade and remain compliant?

- A. Retiring from fleet
- **B. Different model replacement**
- C. ChromeOS Flex upgrade transfer
- D. Same model replacement

Answer: B

Explanation:

When deprovisioning ChromeOS devices for a hardware recall and replacement with different models, choosing the "Different model replacement" option is crucial to retain the Chrome Education/Enterprise Upgrade license compliance. This option ensures that the license is transferred to the new device correctly, avoiding any compliance issues or the need to repurchase licenses.

Here's why this option is important:

- * License Transfer: It specifically designates the deprovisioning as being due to a hardware replacement with a different model. This triggers the system to transfer the license to the new device upon enrollment.
- * Compliance: It maintains the compliance of your Chrome Education/Enterprise Upgrade licenses, ensuring you don't violate any licensing terms.
- * Cost Savings: It avoids the need to purchase new licenses for the replacement devices, saving your organization money.

NEW QUESTION # 16

A school wants all new Chromebooks to be enrolled through zero-touch enrollment (ZTE) in their parent organization unit. An admin needs to create tokens.

Where will the admin go to generate the enrollment tokens for Chromebooks?

- A. Devices > Chrome > Enroll
- B. Devices > Chrome > Settings
- C. Devices > Chrome > Connectors
- D. Devices > Chrome > Devices > Enroll

Answer: A

Explanation:

To set up Zero-Touch Enrollment (ZTE), an administrator must go to Devices > Chrome > Enroll within the Admin console. This is where they can generate the necessary enrollment tokens for automatic enrollment of devices when they first connect to the Internet.

Verified Answer from Official Source:

The correct answer is verified from the Google ChromeOS Zero-Touch Enrollment Guide, which specifies the steps to generate enrollment tokens.

"To create Zero-Touch Enrollment tokens, go to Devices > Chrome > Enroll in the Admin console." Zero-Touch Enrollment simplifies the setup process for educational institutions by automatically enrolling devices into management without manual intervention.

Objectives:

- * Automate device enrollment using Zero-Touch.
- * Simplify ChromeOS deployment in educational environments.

NEW QUESTION # 17

You want to enterprise enroll a device that has existing consumer accounts. What should you do first?

- A. Delete all consumer accounts, and then follow the same steps for enrolling a brand new device
- B. Contact Google support to convert the device into an enterprise device
- C. Wipe the device
- D. follow the same steps for enrolling a brand new device

Answer: A

Explanation:

* Device State: Before you can enroll a ChromeOS device into an enterprise environment, it's crucial that it's not associated with any personal Google accounts. Existing consumer accounts can interfere with the enrollment process and the application of enterprise policies.

* Data Backup (Optional): If the existing consumer accounts on the device contain important data, advise the users to back up their information before proceeding.

* Account Removal: Sign in to the device with each consumer account and remove the account from the device. This ensures a clean slate for the enterprise enrollment process.

* Powerwash (Optional): While not strictly necessary after removing accounts, performing a powerwash (factory reset) is a recommended step. It further erases any remaining data or configurations linked to the consumer accounts, ensuring a completely fresh start for the device.

* Enrollment: Once the consumer accounts are removed (and optionally, after powerwashing), follow the standard enterprise enrollment steps for your organization. This typically involves entering enterprise credentials at the login screen, or using a unique enrollment token, depending on your company's setup.

methods.

NEW QUESTION # 18

To use Verified Access in your organization, you need to have a Chrome extension that calls Verified Access API on the client devices. Where can you go to get this extension?

- A. Software API Key store
- B. Google Play Store
- C. Independent software vendor (ISV) or Google Verified Access API
- D. Independent software vendor (ISV) repository

Answer: C

Explanation:

Verified Access requires a Chrome extension to communicate with the Verified Access API. While Google doesn't directly provide this extension, it offers detailed documentation and resources through the Verified Access API. Independent software vendors (ISVs) can use these resources to develop and provide compatible extensions.

Option A is incorrect because Google Play Store is for Android apps, not Chrome extensions.

Option C is incorrect because while ISVs might offer extensions, it's not the sole source. Google's documentation is essential.

Option D is incorrect because API keys are for authentication, not the extension itself.

NEW QUESTION # 19

.....

Worrying over the issue of passing exam has put many exam candidates under great stress. Many people feel on the rebound when they aimlessly try to find the perfect practice material. Our team will relieve you of tremendous pressure with passing rate of the Professional ChromeOS Administrator Exam prepare torrents up to 98 percent to 100 percent. Even we have engaged in this area over ten years, professional experts never blunder in their handling of the ChromeOS-Administrator Exam torrents. By compiling our Professional ChromeOS Administrator Exam prepare torrents with meticulous attitude, the accuracy and proficiency of them is nearly perfect. As the leading elites in this area, our Professional ChromeOS Administrator Exam prepare torrents are in concord with syllabus of the exam. They are professional backup to this fraught exam.
