SAP Certified Associate - Implementation Consultant - SAP Customer Data Cloud Sample Questions (Q40-Q45):

NEW QUESTION # 40

A customer with three websites wants a unified database for all the sites, without seamless login between the sites. How would this be configured in the console?

- A. One site group with SSO enabled and two segments
- B. One site group with SSO enabled and one segment
- **C. One site group with SSO disabled and one segment**
- D. Two site groups with SSO disabled and one segment

Answer: C

Explanation:

To achieve a unified database for three websites without seamless login (SSO) between them, you should configure one site group with SSO disabled and use one segment to unify the data across all sites.

* Option A: Incorrect. Enabling SSO would allow seamless login between the sites, which contradicts the requirement.

* Option B: Correct. Disabling SSO ensures that users cannot log in seamlessly across the sites, while using one segment allows all

sites to share a unified database.

* Option C: Incorrect. Using two site groups complicates the setup unnecessarily and does not align with the requirement for a unified database.

* Option D: Incorrect. Enabling SSO would allow seamless login, which is not desired in this scenario.

NEW QUESTION # 41

Using dataflows, you want to export data to an SFTP server.

How do you ensure that only users who have granted consent are exported?

- A. Use the `datasource.write.sftp` component with the `remotePath` parameter.
- B. Use the `datasource.write.gigya.account` component with the `updatePolicy` parameter.
- C. Use the `datasource.read.gigya.ds` component with the `deltaField` parameter.
- **D. Use the `datasource.read.gigya.account` component with the `consent` parameter.**

Answer: D

NEW QUESTION # 42

You are editing a dataflow.

Which actions can you perform?

Note: There are 2 correct answers to this question.

- A. Add a component responsible for starting the schedule of the dataflow.
- **B. Preview the schema in a datasource component.**
- **C. Use a `datasource.lookup` component to check if a record exists in the site.**
- D. Add multiple Next steps to a component.

Answer: B,C

NEW QUESTION # 43

How can you check the session status in an iOS Swift SDK?

- A. `gigya.sharedInstance().session Expiration Timestamp`
- B. `gigya.isLoggedIn()`
- **C. `gigya.isSessionAlive()`**
- D. `gigya.session Expiration Timestamp`

Answer: C

Explanation:

To check the session status in the iOS Swift SDK, you should use the `gigya.isSessionAlive()` method. This method determines whether the current session is active and valid.

* Option A: Correct. The `gigya.isSessionAlive()` method checks if the session is still valid by verifying the session token and its expiration time.

* Option B: Incorrect. The `gigya.isLoggedIn()` method checks if the user is logged in but does not verify the session's validity.

* Option C: Incorrect. `gigya.sessionExpirationTimestamp` provides the timestamp of when the session expires but does not actively check the session status.

* Option D: Incorrect. `gigya.sharedInstance().sessionExpirationTimestamp` is similar to Option C and only provides the expiration timestamp without verifying the session.
