simulating questions have won worldwide praise and acceptance as a result. They are 100 percent guaranteed practice materials. Though at first a lot of our new customers didn't believe our Web-Development-Applications Exam Questions, but they have become the supporters now.

WGU Web Development Applications Sample Questions (Q93-Q98):

NEW QUESTION # 93

Given the following code:

What does the #item token do?

- A. It defines a JavaScript function with one parameter.
- B. It specifies a CSS3 property.
- **C. It locates an HTML5 element by its ID**
- D. It creates an XML element.

Answer: C

Explanation:

The #item token in CSS is used to select an HTML element by its ID attribute.

* CSS ID Selector:

* Syntax: The ID selector is prefixed with a hash symbol (#) followed by the ID value of the HTML element.

* Example: If the HTML element has an attribute id="item", it can be selected and styled in CSS as:

```
width: 300px;  
}
```

* Functionality:

* Selects an Element: The ID selector targets the specific HTML element with the matching id attribute.

* Specificity: ID selectors have high specificity, meaning they will override styles from type selectors and

NEW QUESTION # 94

Which attribute displays help text in an input field without specifying an actual value for the input?

- A. Default
- B. name
- C. For
- **D. Placeholder**

Answer: D

Explanation:

The placeholder attribute in an <input> element displays help text in the input field without specifying an actual value for the input.

This text disappears when the user starts typing.

* Placeholder Attribute: This attribute provides a hint to the user about what type of information is expected in the field.

* Usage Example:

```
<input type="text" placeholder="Enter your name">
```

The input field will show "Enter your name" as help text.

References:

* MDN Web Docs on placeholder

* W3C HTML Specification on Input Placeholder

NEW QUESTION # 95

What is the default behavior of overlay elements?

- A. First element listed is invisible
- B. Last element listed appears on bottom
- **C. Last element listed appears on top**
- D. First element listed is transparent

Answer: C

Explanation:

In CSS, when elements overlap, the default behavior is that the last element listed in the HTML document appears on top.

* Stacking Context:

* Default Behavior: Elements are stacked in the order they appear in the HTML. The last element in the document tree is rendered on top.

* z-index: You can control stacking order using the z-index property, but without it, the default order applies.

* Example:

* Given HTML:

```
<div style="position: absolute; width: 100px; height: 100px; background-color: red;"></div>
```

```
<div style="position: absolute; width: 100px; height: 100px; background-color: blue;"></div>
```

* The blue div will be on top of the red div because it appears later in the HTML document.

W3C CSS Positioned Layout Module Level 3

By understanding these fundamental CSS concepts, developers can create more effective and visually appealing web layouts.

NEW QUESTION # 96

Given the following CSS code:

Which type of selector is used?

- A. Element
- B. Class
- **C. ID**
- D. Group

Answer: C

Explanation:

The given CSS code uses the `#name` selector, which is an ID selector. The ID selector is used to style an element with a specific id attribute.

* ID Selector: In CSS, the ID selector is used to style the element with the specific id. The syntax for the ID selector is `#id`, where id is the id attribute value of the HTML element.

* Usage Example:

```
#name {  
  text-align: left;  
}
```

This CSS rule will apply the `text-align: left;` style to the element with `id="name"`.

* ID Selector Characteristics:

* An ID must be unique within a document, meaning it can be used only once per page.

* ID selectors are more specific than class selectors and element selectors.

* Example in HTML:

```
<div id="name">This is a div with ID "name".</div>
```

References:

* MDN Web Docs on CSS Selectors

* W3C CSS Specification on Selectors

NEW QUESTION # 97

Given the following markup and no style sheet:

Which control does the input element render?

- A. Drop-down
- B. Button
- **C. Slider**

- D. Text

Answer: C

Explanation:

The `type="range"` attribute in an `<input>` element renders a slider control.

* HTML Input Type range:

* Purpose: The `range` type is used for input fields that should contain a value from a range of numbers.

* Example:

* Given the HTML:

```
<input id="range" name="range" type="range">
```

* Explanation:

* This will render as a slider that the user can move to select a value within a range.

:
