

# Oracle 1z0-1093-25 Dumps PDF And Practice Test Software

P.S. Free & New 1z0-1093-25 dumps are available on Google Drive shared by BraindumpsIT: <https://drive.google.com/open?id=1ERT1tOIXsz-ocv9tNxc-k0-zPM9V9NF->

Up to now, more than 98 percent of buyers of our 1z0-1093-25 practice braindumps have passed it successfully. And our 1z0-1093-25 training materials can be classified into three versions: the PDF, the software and the app version. Though the content is the same, but the displays are different due to the different study habits of our customers. So we give emphasis on your goals, and higher quality of our 1z0-1093-25 Actual Exam.

## Oracle 1z0-1093-25 Exam Syllabus Topics:

| Topic   | Details   |
|---------|---|
| Topic 1 | <ul style="list-style-type: none"><li>MySQL HeatWave Technical Overview: This section of the exam measures the skills of a MySQL Cloud Specialist and introduces MySQL HeatWave, Oracle's high-performance analytics engine for MySQL. It includes provisioning, migrating existing MySQL databases to HeatWave, and working with its analytical and machine-learning capabilities. It also covers day-to-day operational activities within the MySQL HeatWave environment.</li></ul>   |
| Topic 2 | <ul style="list-style-type: none"><li>Oracle Cloud Infrastructure Database Management Service: This section of the exam measures the skills of a Cloud Operations Analyst and provides insight into Oracle's Database Management Service on OCI. It focuses on enabling the service for databases, monitoring their performance, and performing diagnostic and tuning activities. It also covers tasks related to the administration of databases running on Oracle Cloud Infrastructure.</li></ul>                                   |
| Topic 3 | <ul style="list-style-type: none"><li>Base Database Service - VM (BaseDB): This section of the exam measures the skills of a Cloud Database Administrator and covers the foundational elements of Oracle's Base Database Service. It includes understanding what the BaseDB service is, how to provision and manage it, and lifecycle operations such as backups, recovery, patching, and upgrades. It also tests familiarity with monitoring and management interfaces used to control and observe the BaseDB environment.</li></ul> |

|         |  |
|---------|--|
| Topic 4 | <ul style="list-style-type: none"> <li>• NoSQL Database Service Technical Overview: This section of the exam measures the skills of a NoSQL Developer and explores Oracle's NoSQL Database Service. It includes understanding the basics of NoSQL architecture, handling table-level security, rate limiting, and data modeling. It also covers concepts like provisioned throughput and the usage of language SDKs for interacting with NoSQL services on Oracle Cloud.</li> </ul>                |
| Topic 5 | <ul style="list-style-type: none"> <li>• Exadata Database Service (ExaDB): This section of the exam measures the skills of a Database Infrastructure Engineer and focuses on the advanced Exadata Database Service. It includes the provisioning of Exadata systems, management of Exadata Cloud Infrastructure, and VM Cluster administration. It also evaluates knowledge of lifecycle management tasks and how to interact with various Exadata management utilities and interfaces.</li> </ul> |

## Cost Effective 1z0-1093-25 Dumps | Latest 1z0-1093-25 Version

You can become part of this skilled and qualified community. To do this you enroll in the BraindumpsIT Oracle 1z0-1093-25 certification exam and start preparation with real and valid Oracle Cloud Database Services 2025 Professional (1z0-1093-25) exam practice test questions right now. The BraindumpsIT 1z0-1093-25 Exam Practice test questions are checked and verified by experienced and qualified 1z0-1093-25 exam trainers. So you can trust BraindumpsIT Oracle 1z0-1093-25 exam practice test questions and start preparation with confidence.

## Oracle Cloud Database Services 2025 Professional Sample Questions (Q52-Q57):

### NEW QUESTION # 52

Oracle NoSQL Database Cloud Service's key-value model is well-suited for certain types of applications.

Which of the following application scenarios would most directly benefit from the key-value data model's characteristics?

- A. An application requiring complex analytical queries and joins across multiple related datasets.
- **B. A social media platform needing to store and retrieve individual user profiles and their associated data quickly.**
- C. A financial system requiring strict transactional integrity and complex relationships between accounts and transactions.
- D. An enterprise resource planning (ERP) system managing intricate relationships between various business entities.
- E. A content management system needing to enforce a rigid schema for all documents and their metadata.

**Answer: B**

Explanation:

B: Social Media Platform:

\* Social media applications require quick retrieval of user profiles based on unique IDs.

\* The key-value model supports fast lookups and simple data associations, ideal for user-centric data.

\* The flexibility of storing user attributes in a single document enhances performance and scalability.

Why the other options are incorrect:

\* A. Complex analytical queries: Relational or analytical databases are better suited.

\* C. Financial systems: Require ACID compliance and complex joins, not suitable for key-value models.

\* D. Content management: Typically requires a more structured approach, better handled by document databases.

\* E. ERP systems: Need relational integrity and complex schema support.

### NEW QUESTION # 53

Which of the following is the recommended approach for migrating a large, mission-critical database from an on-premises Exadata system to Exadata Database Service with minimal downtime?

- A. Traditional export/import using Data Pump over a public network.
- B. Performing a full backup and restore to a new Exadata Database Service instance.
- **C. Creating a physical standby database using Data Guard and switching over to the standby in OCI.**
- D. Using SQL Developer to copy the data over a VPN connection.

**Answer: C**

Explanation:

B: Using Data Guard for physical standby and switchover:

- \* This method enables minimal downtime migration.

- \* Steps:

- \* Configure Data Guard to synchronize the standby database with the primary on-premises database.

- \* Once synchronized, perform a switchover to make the standby the new primary.

- \* Downtime is limited to the switchover duration.

- \* This approach leverages real-time replication to minimize disruption.

Why the other options are incorrect:

- \* A. Export/Import with Data Pump: Too time-consuming for large databases.

- \* C. Full backup and restore: High downtime due to the time required for data transfer and restoration.

- \* D. Copying via SQL Developer: Not feasible for mission-critical and large databases due to slow transfer speeds.

#### NEW QUESTION # 54

When provisioning a new BaseDB VM, which statement BEST describes the relationship between the available Database Versions and the selected Operating System image?

- A. The Database Version determines the Operating System image that will be used, irrespective of the initially selected image.
- **B. Only Database Versions compatible with the underlying Operating System image are presented as options during provisioning.**
- C. All Database Versions are compatible with all Operating System images available in the OCI Marketplace.
- D. The chosen Operating System image is automatically upgraded to the latest version compatible with the selected Database Version after provisioning.

**Answer: B**

Explanation:

B: Only compatible Database Versions are presented:

- \* The provisioning process filters out incompatible combinations, presenting only database versions that match the chosen OS image.

- \* This ensures that the database software can run properly on the selected OS.

- \* This compatibility check prevents deployment failures and ensures system stability.

Why the other options are incorrect:

- \* A. All Database Versions are compatible: Incorrect; some versions are OS-specific.

- \* C. Automatic OS upgrade: OCI does not automatically upgrade the OS for compatibility.

- \* D. Database version determines OS image: The OS image is selected independently, with the system ensuring compatibility.

#### NEW QUESTION # 55

Within the context of Exadata Database Service, what does scaling out primarily refer to?

- A. Upgrading the version of the Oracle Database software.
- **B. Adding additional database server VMs and storage servers to the Exadata system.**
- C. Increasing the CPU core count of a single database server VM.
- D. Expanding the amount of RAM available to a single database instance.

**Answer: B**

Explanation:

Scaling Out:

Scaling out in Exadata means increasing the number of database server VMs and storage servers to handle a larger workload. This is achieved by adding more compute nodes and storage cells, allowing the system to distribute database processing across multiple nodes.

This horizontal scalability is ideal for environments with fluctuating workloads or growing data volumes. It improves query performance and fault tolerance since data and workload are distributed across more hardware resources.

Why the other options are incorrect:

- \* A: Increasing CPU cores within a single VM is considered scaling up.

- \* C: Upgrading the database software version is unrelated to scaling.

- \* D: Increasing RAM is also a form of scaling up, not scaling out.

### NEW QUESTION # 56

What is the PRIMARY benefit of using Recovery Manager (RMAN) with block change tracking enabled in a BaseDB environment for incremental backups?

- A. It automatically validates the integrity of full backups during the backup process.
- B. It allows for point-in-time recovery to any SCN (System Change Number) without restoring a full backup.
- **C. It significantly reduces the time required for incremental backups by only backing up changed blocks.**
- D. It automatically encrypts all backups with a user-defined key.
- E. It eliminates the need for full backups.

**Answer: C**

Explanation:

Block Change Tracking (BCT):

Enabling BCT with RMAN significantly speeds up incremental backups by recording changes made to data blocks since the last backup. Instead of scanning the entire database to detect changes, RMAN consults the block change tracking file to identify modified blocks, reducing backup time and I/O.

BCT is especially beneficial in large databases where full backups would be time-consuming and resource-intensive. Incremental backups become more efficient, making daily or more frequent backups feasible.

Why the other options are incorrect:

- \* A: Full backups are still required periodically.
- \* C: Encryption is separate from BCT functionality.
- \* D: Point-in-time recovery is facilitated by backup logs, not BCT directly.
- \* E: Integrity checks are performed during validation, not as part of BCT.

### NEW QUESTION # 57

.....

Under the instruction of our 1z0-1093-25 exam torrent, you can finish the preparing period in a very short time and even pass the exam successfully, thus helping you save a lot of time and energy and be more productive with our Oracle Cloud Database Services 2025 Professional prep torrent. In fact, the reason why we guarantee the high-efficient preparing time for you to make progress is mainly attributed to our marvelous organization of the content and layout which can make our customers well-focused and targeted during the learning process with our 1z0-1093-25 Test Braindumps.
