P.S. Free 2025 Oracle 1Z0-1111-25 dumps are available on Google Drive shared by ExamTorrent: <https://drive.google.com/open?id=16DSMCBAWKjpSqVBcAWLIxcYzx7pOAWNY>

Even the fierce competition cannot stop demanding needs from exam candidates. To get more specific information about our 1Z0-1111-25 learning quiz, we are here to satisfy your wish with following details. So you can get detailed information with traits and information about our 1Z0-1111-25 Real Exam requested on the website. You can free download the demos of our 1Z0-1111-25 exam questions and click on every detail that you are interested.

Oracle 1Z0-1111-25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Monitor Distributed Components of an Application Stack: This section measures the skills of Stack Monitoring Specialists and Cloud Administrators in using OCI Stack Monitoring. It covers discovering resources within application stacks, monitoring metrics across distributed components, and ensuring optimal performance through effective resource management.
Topic 2	• Respond to Cloud Resource Changes in Real-Time: This domain measures the skills of Event Managers and Integration Specialists in using OCI Events Service. It covers event structures, types, rules, and integration with other OCI services to respond effectively to resource changes and automate workflows.

Topic 3	• Distinguish the Key Concepts of Logging Analytics: This section evaluates the expertise of Data Analysts and Troubleshooting Specialists in using OCI Logging Analytics. It covers log ingestion methods, searching and filtering logs, performing advanced analytics, and leveraging machine learning-powered insights for proactive issue resolution.
Topic 4	• Centrally Manage and Visualize Log Data: This section assesses the abilities of Logging Analysts and Security Engineers in managing logs across an entire IT environment. It includes enabling log collection, creating connectors for log transitions, identifying log patterns, and visualizing logs for advanced analytics using OCI Logging Service.
Topic 5	• Monitor Cloud Environments with Metrics and Alarms: This section tests Oracle Cloud Operators' knowledge of configuring OCI Monitoring Service. It includes enabling metrics for resource monitoring, setting up alarms based on best practices, and responding to real-time changes in cloud environments to ensure system reliability.

Quiz Latest Oracle - 1Z0-1111-25 - New Oracle Cloud Infrastructure 2025 Observability Professional Test Sims

By keeping minimizing weak points and maiming strong points, our Oracle 1Z0-1111-25 exam materials are nearly perfect for you to choose. As a brand now, many companies strive to get our Oracle Cloud Infrastructure 2025 Observability Professional 1Z0-1111-25 practice materials to help their staffs achieve more certifications for our quality and accuracy.

Oracle Cloud Infrastructure 2025 Observability Professional Sample Questions (Q61-Q66):

NEW QUESTION # 61

What is the purpose of using Resolution in a Monitoring Query Language expression?

- A. Resolution automatically resolves the alarm which is Firing state
- B. Resolution is used with suppression to pause alarm during system maintenance
- C. Resolution defines the start time of each time window
- D. Resolution controls the total length of each time window

Answer: D

Explanation:

In OCI Monitoring's Monitoring Query Language (MQL), Resolution affects data aggregation:

Resolution controls the total length of each time window (A): It specifies the time interval (e.g., 1m for 1 minute) over which metric data is aggregated (e.g., averaged, summed), determining query granularity.

Why not B, C, or D?

B: Start time is set by the query's time range, not Resolution.

C: Resolution doesn't affect alarm states; that's a separate mechanism.

D: Suppression is an alarm feature, unrelated to Resolution.

Resolution fine-tunes metric analysis precision.

NEW QUESTION # 62

Which two resources can be monitored by Stack Monitoring? (Choose two.)

- A. Object Storage Buckets
- B. WebLogic Servers
- C. Oracle External Databases
- D. Virtual Cloud Networks

Answer: B,C

Explanation:

Stack Monitoring tracks application stack components:

WebLogic Servers (B): Monitors performance and health of WebLogic instances.

Oracle External Databases (C): Tracks on-premises or cloud Oracle databases outside OCI's native DBaaS.

Why not A or D?

Object Storage Buckets (A): Not supported by Stack Monitoring; use Logging instead.

Virtual Cloud Networks (D): Network monitoring is separate (e.g., VCN Flow Logs).

These align with Stack Monitoring's focus on application stacks.

NEW QUESTION # 63

What are the TWO benefits of Observability Lakehouse in Operations Insights? (Choose two.)

- A. Allows Oracle Enterprise Manager's operations data for various use-cases
- B. Provides data based on a statistical analysis of AI data
- C. Identifies future resource usage Oracle Cloud
- D. Enables custom analytics such as trending, forecasting, capacity planning, workload characterizations

Answer: A,D

Explanation:

The Observability Lakehouse in Operations Insights is a data repository for operational analytics:

Enables custom analytics (B): Supports trending (e.g., usage patterns), forecasting (e.g., resource needs), capacity planning, and workload profiling using advanced analytical tools, enhancing resource optimization.

Allows Oracle Enterprise Manager's data (D): Integrates operational data from Enterprise Manager (e.g., database metrics) for use cases like performance analysis and anomaly detection.

Why not A or C?

Statistical analysis of AI data (A): Too vague; Lakehouse focuses on operational data, not AI-specific stats.

Identifies future resource usage (C): Partial benefit of B, but not a standalone feature.

These capabilities improve operational decision-making.

NEW QUESTION # 64

Which Machine Learning-based visualization is helpful in analyzing extremely large volumes of log records by grouping them based on their shape?

- A. Cluster
- B. Word Cloud
- C. Summary Table

Answer: A

Explanation:

In Logging Analytics, ML-driven visualizations aid log analysis:

Cluster (A): Uses machine learning to group logs by structural similarity ("shape"), reducing noise and highlighting patterns or anomalies in large datasets.

Why not B or C?

Summary Table (B): Aggregates data tabularly, not ML-based or shape-focused.

Word Cloud (C): Displays word frequency, not structural grouping.

Cluster is ideal for large-scale log pattern recognition.

NEW QUESTION # 65

Which is the recommended method to continuously monitor and ingest logs from Object Storage buckets?

- A. ObjectCollection Rule
- B. Object Store Bucket
- C. Object Storage
- D. Object Store

Answer: A

ObjectCollection Rule ensures automated, ongoing log collection.
