As a FAW Service Administrator, you have access to two consoles: the FAW console and an OAC console.
The FAW console is used to manage the FAW service, such as setting up data sources, loading data, monitoring data pipelines, and configuring users and roles. The OAC console is used to access the prebuilt dashboards and reports, as well as create and customize your own analytics content. However, the OAC console has limited functionality as compared to the standalone OAC platform service, such as restricted access to data sources, data flows, and data sets4
