Oracle Cloud Infrastructure 2025 AI Foundations Associate Sample Questions (Q17-Q22):

NEW QUESTION # 17

You are part of the medical transcription team and need to automate transcription tasks. Which OCI AI service are you most likely to use?

- A. Document Understanding
- **B. Speech**
- C. Language
- D. Vision

Answer: B

Explanation:

For automating transcription tasks in a medical transcription team, the most appropriate OCI AI service to use would be the "Speech" service. This service is designed to convert spoken language into text, which is essential for transcribing spoken medical reports or consultations into written form. The OCI Speech service provides capabilities such as speech-to-text conversion, which is specifically tailored for handling audio input and producing accurate transcriptions.

NEW QUESTION # 18

What feature of OCI Data Science provides an interactive coding environment for building and training models?

- A. Conda environment
- **B. Notebook sessions**
- C. Accelerated Data Science (ADS) SDK
- D. Model catalog

Answer: B

Explanation:

In OCI Data Science, Notebook sessions provide an interactive coding environment that is essential for building, training, and deploying machine learning models. These sessions allow data scientists to write and execute code in real time, offering a flexible environment for data exploration, model experimentation, and iterative development. The integration with various OCI services and support for popular machine learning frameworks further enhances the utility of Notebook sessions, making them a crucial tool in the data science workflow.

NEW QUESTION # 19

Which is NOT a category of pretrained foundational models available in the OCI Generative AI service?

- A. Chat models
- **B. Translation models**
- C. Generation models
- D. Embedding models

Answer: B

Explanation:

The OCI Generative AI service offers various categories of pretrained foundational models, including Embedding models, Chat models, and Generation models. These models are designed to perform a wide range of tasks, such as generating text, answering questions, and providing contextual embeddings. However, Translation models, which are typically used for converting text from one language to another, are not a category available in the OCI Generative AI service's current offerings. The focus of the OCI Generative AI service is more aligned with tasks related to text generation, chat interactions, and embedding generation rather than direct language translation.

NEW QUESTION # 20

How does AI enhance human efforts?

- A. By completely replacing human workers in all tasks
- B. By deleting data humans need to handle
- C. By increasing the physical strength of humans
- **D. By processing data at a speed and effectiveness far beyond human capability**

Answer: D

Explanation:

AI enhances human efforts by processing large volumes of data quickly and accurately, performing complex computations that would be time-consuming or impossible for humans to handle manually. This allows humans to focus on more strategic, creative, and decision-making tasks, leveraging AI's ability to provide insights, automate repetitive processes, and support decision-making. AI does not physically enhance human capabilities, nor does it replace human workers in all tasks. Instead, it serves as an augmentation tool, amplifying human productivity and capabilities.

NEW QUESTION # 21

Which feature is NOT supported as part of the OCI Language service's pretrained language processing capabilities?

- A. Text Classification
- B. Language Detection
- **C. Text Generation**
- D. Sentiment Analysis

Answer: C

Explanation:

The OCI Language service offers several pretrained language processing capabilities, including Text Classification, Sentiment Analysis, and Language Detection. However, it does not natively support Text Generation as a part of its core language processing capabilities. Text Generation typically involves creating new content based on input prompts, which is a feature more commonly associated with models specifically designed for natural language generation.
