Oracle 1Z0-1126-1 Exam Syllabus Topics:

Topic	Details
Topic 1	• Continuous Improvement: Mature: Ongoing refinement is essential for maintaining the effectiveness of OGL content. Organizations plan for quarterly updates, refreshes, and necessary changes to keep learning materials relevant and up to date. Reviewing OGL analytics provides valuable insights into content performance, enabling continuous optimization and improvement. This phase ensures that the learning framework remains dynamic and aligned with evolving business needs, maximizing the long-term impact of OGL deployment.
Topic 2	• Project Phase 1: Focus: This phase involves defining the OGL project plan, including governance structures that oversee implementation and ensure alignment with business objectives. OGL training, learning paths, and business processes play a vital role in equipping users with the necessary skills and knowledge for efficient adoption. Identifying essential resources, including key team members, lays the foundation for a successful rollout. OGL Cloud Service activation is a critical step, allowing organizations to manage users within the OGL console, ensuring secure and streamlined access. Proper documentation is essential for content building, testing, and customization, forming the basis for a structured and scalable deployment.
Topic 3	• Project Phase 3: Enable: This phase focuses on finalizing resources, documentation, and deadlines for implementation sign-off. Deploying content to production is a crucial step, marking the transition from testing to live usage. Go-live support and hypercare processes are put in place to ensure a smooth transition, providing immediate assistance and troubleshooting to address any issues. This stage ensures that the OGL deployment is stable and fully functional, ready to deliver value to the organization.
Topic 4	• Introduction to OGL Content: OGL plays a crucial role in enabling organizations to efficiently manage learning content, ensuring seamless deployment and accessibility. It provides a structured framework for organizing, delivering, and tracking learning materials to enhance workforce skills. The OGL Deployment approach outlines a structured implementation process that organizations follow to integrate OGL within their systems. Organizations nest within this deployment approach by aligning their training objectives, resources, and processes with OGL's capabilities, ensuring a smooth adoption and effective utilization of learning content.
Topic 5	• Project Phase 2: Refine: At this stage, organizations refine their project scope, estimate timelines, and ensure alignment with strategic objectives. Selecting appropriate OGL content from libraries helps tailor learning materials to organizational needs. Deployment considerations, including defining the environment, test users, and data requirements, ensure a robust testing phase before full implementation. The process of building, testing, and customizing OGL content is refined to optimize effectiveness. Planning for optional activities, such as activation and role conditions or display groups, ensures flexibility and adaptability in deployment.

Oracle Guided Learning Project Management Foundations Associate - Rel 1 Sample Questions (Q36-Q41):

NEW QUESTION # 36
Which OGL analytics dashboard provides data on how many of each type of guide is available in the OGL console?

- A. Content dashboard
- B. Feedback dashboard
- C. Activity dashboard
- D. Users dashboard

Answer: A

Explanation:
The Content dashboard in OGL provides a detailed breakdown of the content inventory within the console, including the quantity of each guide type (e.g., Base Guides, Process Guides, Smart Tips). This dashboard is essential for content management, offering visibility into the total number and categories of guides available, whether in Draft, Published, or Archived status. The Users dashboard (option A) focuses on user activity and login metrics, the Activity dashboard (option B) tracks guide usage and engagement over time, and the Feedback dashboard (option D) analyzes user ratings and comments. Only the Content dashboard directly addresses the question of "how many" by type, making it indispensable for content audits and planning, ensuring teams know the scope of their resources.

NEW QUESTION # 37
What can information from the Application dashboard be used for?

- A. Show decision-makers' feedback from end users.
- B. Deliver a full picture on the types of content.
- C. Identify high-usage days to launch messages.

Answer: C

Explanation:
The Application dashboard in OGL provides data on application usage patterns, such as peak times or high-traffic days, which can be leveraged to strategically launch messages or notifications when users are most active (option A). This timing optimization enhances visibility and engagement. Option B (types of content) aligns with the Content dashboard, not Application, while option C (feedback) pertains to the Feedback dashboard. The Application dashboard's focus on usage trends rather than content specifics or feedback makes it a tactical tool for communication planning, ensuring messages reach users at optimal moments based on their interaction habits.

NEW QUESTION # 38
What do the following factors determine?
Timelines from the change management strategy
The cloud implementation plan
Planning for optional activities

- A. OGL content development
- B. Hypercare and maintenance
- C. When to celebrate go live
- D. OGL project scope and timelines

Answer: D

Explanation:
The listed factors-timelines from change management, the cloud implementation plan, and optional activity planning-collectively determine the OGL project scope and timelines (option B). These elements define the project's boundaries, duration, and resource allocation, integrating change management and implementation schedules into a cohesive framework. Hypercare and maintenance (option A) are outcomes, not determinants, while celebration timing (option C) and content development (option D) are narrower aspects influenced by the broader scope. This holistic determination ensures the project aligns with organizational goals and technical constraints, setting the stage for all subsequent activities.

NEW QUESTION # 39
Which applications are eligible to receive the OGL Included offering?

- A. Third-party applications
- B. Oracle Fusion SaaS applications
- C. Any Oracle applications

Answer: B

Explanation:
The OGL Included offering is specifically available for Oracle Fusion SaaS applications (option B), as it's bundled with these cloud

solutions to enhance user guidance. Not all Oracle applications (option A) qualify, and third-party applications (option C) require separate integration, not the Included offering. This eligibility ties OGL's native support to Fusion's SaaS model, ensuring seamless deployment within Oracle's core cloud ecosystem.

NEW QUESTION # 40
Which OGL analytics dashboard provides a summary of guide activity for a specified time period, by type as well as summarizing user engagement metrics?

- A. Content dashboard
- B. Feedback dashboard
- C. Activity dashboard
- D. Users dashboard

Answer: C

Explanation:
The Activity dashboard in OGL is tailored to provide a comprehensive summary of guide activity over a specified period, breaking it down by guide type (e.g., Process Guides, Smart Tips) and including user engagement metrics such as views, completions, or interactions. This dashboard is crucial for understanding how content is being used in practice, offering insights into both frequency and effectiveness. The Users dashboard (option A) focuses on login and user-specific data, the Feedback dashboard (option B) highlights user opinions, and the Content dashboard (option D) details content availability, not usage. The Activity dashboard's dual focus on type-specific activity and engagement metrics makes it the ideal tool for tracking performance trends and identifying areas for improvement, aligning perfectly with the question's requirements.
