

Oracle 1Z0-1151-25 Certification Dumps - 1Z0-1151-25 New Braindumps Files

What's more, part of that PDFTorrent 1Z0-1151-25 dumps now are free: <https://drive.google.com/open?id=1jb9MEsrWriPGnFVT1-uHQfXz8PQkGSwY>

Our 1Z0-1151-25 training materials are regarded as the most excellent practice materials by authority. Our company is dedicated to researching, manufacturing, selling and service of the 1Z0-1151-25 study guide. Also, we have our own research center and experts team. So our products can quickly meet the new demands of customers. That is why our 1Z0-1151-25 Exam Questions are popular among candidates. we have strong strenght to support our 1Z0-1151-25 practice engine.

The high efficiency method is targeted learning rather than comprehensive learning. Comprehensive learning can improve your basic knowledge but it is not the best to clear exams and obtain certifications. Our valid Oracle 1Z0-1151-25 exam cram review can help you pass this subject in a short time. If your goal is passing all exams and obtain a useful certification. The best shortcut is to buy Valid 1Z0-1151-25 Exam Cram Review. Most experienced people can prove that. Good products are here waiting for you.

1Z0-1151-25 New Braindumps Files, Pdf 1Z0-1151-25 Torrent

We are dedicated to helping you pass your exam just one time. 1Z0-1151-25 learning materials are high quality, and we have received plenty of good feedbacks from our customers, they thank us for helping the exam just one time. If you can't pass your exam in your first attempt by using 1Z0-1151-25 exam materials of us, we ensure you that we will give you full refund, and no other questions will be asked. In addition, we provide you with free demo for one year for 1Z0-1151-25 Exam Braindumps, and the update version for 1Z0-1151-25 exam materials will be sent to your email address automatically.

Oracle 1Z0-1151-25 Exam Syllabus Topics:

| Topic | Details |
|-------|---------|
| | |

| | |
|---------|---|
| Topic 1 | <ul style="list-style-type: none"> • Core OCI Services Overview: This section evaluates the knowledge of Identity and Database Administrators in managing OCI's core services for multi-cloud integration. It covers the implementation of identity federation between OCI Identity Domains and external identity providers, ensuring secure authentication across multiple cloud environments. Candidates will also gain expertise in configuring Virtual Cloud Network (VCN) components and administering OCI database services, including Base Databases, Autonomous Databases, and HeatWave, to support scalable multi-cloud deployments. |
| Topic 2 | <ul style="list-style-type: none"> • Configure Multicloud Connection Options: This section assesses the abilities of Network Engineers in configuring connectivity solutions for OCI multi-cloud environments. It includes setting up secure networking options such as Site-to-Site VPN and FastConnect for seamless cloud integration. Candidates will also learn how to implement Oracle Interconnect services for establishing direct, high-performance connections between OCI and third-party cloud providers like Microsoft Azure and Google Cloud. |
| Topic 3 | <ul style="list-style-type: none"> • Introduction to Multicloud: This section of the exam measures the skills of Cloud Architects in understanding multicloud environments and their benefits. It covers the reasons organizations adopt multi-cloud strategies, including flexibility, cost optimization, and risk management. Candidates will learn about common multicloud use cases and how they are implemented in Oracle Cloud Infrastructure (OCI) to enhance interoperability and performance. |
| Topic 4 | <ul style="list-style-type: none"> • Implement Oracle Database@Azure: This section tests the expertise of Database Solutions Architects in deploying and managing Oracle Database@Azure. It covers the architectural components and onboarding processes required for provisioning databases in Azure while maintaining Oracle's advanced database capabilities. Candidates will also focus on configuring high availability and disaster recovery strategies to ensure business continuity and data resilience in a multi-cloud setup. |
| Topic 5 | <ul style="list-style-type: none"> • Implement Oracle Database@Google Cloud: This section measures the proficiency of Cloud Database Engineers in utilizing Oracle Database@Google Cloud. It explores the architecture and operational framework for running Oracle databases on Google Cloud. Candidates will learn about onboarding procedures, provisioning resources, and managing database services effectively to optimize performance and availability in a Google Cloud-integrated multi-cloud ecosystem. |

Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Sample Questions (Q55-Q60):

NEW QUESTION # 55

When using the Oracle Database at Azure, which tasks are carried out in the Azure portal?

- A. Provisioning container and pluggable databases
- B. Enabling Data Guard for database backups
- C. Configuring Oracle database homes
- **D. Managing and maintaining Exadata VM cluster and infrastructure**

Answer: D

Explanation:

Oracle Database@Azure is designed to bring Oracle Exadata infrastructure into Azure datacenters. This means that the Azure portal is used for managing the underlying Exadata infrastructure.

Here's a breakdown:

Managing and maintaining Exadata VM cluster and infrastructure: This includes tasks like:

Provisioning and managing the Exadata compute and storage servers

Managing virtual machines within the Exadata cluster

Monitoring the health and performance of the Exadata infrastructure

Applying infrastructure updates and patches

Why the other options are not primarily done in the Azure portal:

Configuring Oracle database homes: While the infrastructure is managed in Azure, the configuration of Oracle database software (like setting up Oracle homes) is typically handled through Oracle tools and utilities, similar to how it's done on-premises or in OCI.

Enabling Data Guard for database backups: Data Guard configuration and management are primarily done using Oracle database tools and commands, not directly within the Azure portal.

Provisioning container and pluggable databases: While the underlying infrastructure resides in Azure, the creation and management of Container Databases (CDBs) and Pluggable Databases (PDBs) are mostly handled using Oracle database tools and potentially through the OCI console for some specific tasks.

NEW QUESTION # 56

During provisioning in Oracle Database@Azure, delegated subnets are linked with OCI VCN inside the OCI pods in Azure. When do you perform this step during provisioning?

- A. Delegated subnets attachment happens when you provide the subnet details during provisioning of Oracle Exadata VM Cluster.
- B. Delegated subnets attachment happens when you provide the subnet details during provisioning of Oracle Exadata Database Service in Azure.
- C. Delegated subnets attachment with OCI pods containing the Exadata Database Service is a prerequisite action that is completed during the OCI account linking.
- D. Delegated subnets attachment happens when you provide the VCN details during the provisioning of container databases in OCI.

Answer: A

Explanation:

In Oracle Database@Azure, delegated subnets from an Azure VNet are linked to the OCI VCN within OCI pods during the provisioning of the Oracle Exadata VM Cluster. This step occurs in the Azure portal when you specify subnet details, enabling the Exadata infrastructure to communicate with Azure resources. Option A is incorrect as container databases are provisioned later in OCI, not Azure. Option B misplaces this as a prerequisite during account linking, and Option C is too vague, as it references the broader service rather than the specific VM Cluster step. Oracle's provisioning guide confirms this timing.

NEW QUESTION # 57

When setting up Oracle Interconnect for Google Cloud, which critical resource needs to be created in the Google Cloud environment?

- A. Google Cloud NAT gateway
- B. Shared VPC with OCI
- C. Cross-Cloud Interconnect VLAN attachment
- D. Partner Interconnect VLAN attachment

Answer: D

Explanation:

When setting up Oracle Interconnect for Google Cloud, you're essentially establishing a connection between your Virtual Private Cloud (VPC) network in Google Cloud and your Virtual Cloud Network (VCN) in OCI. This is achieved through a Partner Interconnect VLAN attachment on the Google Cloud side.

Here's a breakdown:

Partner Interconnect: This Google Cloud service allows you to connect your on-premises network or, in this case, another cloud provider (OCI) to your VPC network through a supported service provider (a "partner").

VLAN attachment: This is a logical connection between your VPC network and the Partner Interconnect. It's the specific resource that carries the traffic between Google Cloud and OCI.

Why the other options are incorrect:

- a). Cross-Cloud Interconnect VLAN attachment: While this sounds similar, Cross-Cloud Interconnect is for direct connections between Google Cloud and other cloud providers, not through a partner. Oracle Interconnect for Google Cloud uses the Partner Interconnect model.
- c). Google Cloud NAT gateway: A NAT gateway is used for providing internet access to resources within a private subnet. While it might be used in conjunction with the interconnect for certain scenarios, it's not the critical resource for establishing the interconnect itself.
- d). Shared VPC with OCI: Shared VPC is a Google Cloud feature that allows multiple projects to share a common VPC network. It's not directly involved in setting up the physical or logical connection between Google Cloud and OCI.

NEW QUESTION # 58

Which is a prerequisite for subscribing to Oracle Database@Azure?

- A. An existing Azure subscription
- B. Private interconnect between OCI and Azure
- C. Custom Identity domain
- D. Linked Azure and Oracle Cloud Infrastructure account

Answer: A

Explanation:

An existing Azure subscription is the foundational prerequisite for subscribing to Oracle Database@Azure, as the service is provisioned and billed through Azure. While a private interconnect (Option A) and linked OCI account (Option C) enhance functionality, they are not mandatory to initiate subscription-linking occurs post-subscription. A custom identity domain (Option D) is optional for federation but not a prerequisite. Oracle's subscription process documentation confirms this requirement.

NEW QUESTION # 59

You are provisioning Oracle Database@Azure. After creating the Exadata Infrastructure, what is the next essential step within the OCI console related to the database environment?

- A. Creating the Azure Virtual Network Peering.
- B. Configuring the Azure Network Security Groups.
- C. Setting up the cross-connect between OCI and Azure.
- D. Creating the Exadata VM Cluster.

Answer: D

Explanation:

After the Exadata Infrastructure (the physical hardware) is provisioned, the next crucial step within the OCI console is creating the Exadata VM Cluster. This VM cluster is the actual compute environment where the Oracle database instances will run. It's a layer of virtualization on top of the physical Exadata hardware. The other options are related to networking and connectivity, which are important but come after the VM cluster is created.

NEW QUESTION # 60

.....

We have to admit that the exam of gaining the 1Z0-1151-25 certification is not easy for a lot of people, especial these people who have no enough time. If you also look forward to change your present boring life, maybe trying your best to have the 1Z0-1151-25 certification is a good choice for you. Now it is time for you to take an exam for getting the certification. If you have any worry about the 1Z0-1151-25 Exam, do not worry, we are glad to help you. Because the 1Z0-1151-25 study materials from our company are very useful for you to pass the exam and get the certification.
