

Oracle 1Z0-1151-25 New Practice Questions - Detailed 1Z0-1151-25 Answers

P.S. Free & New 1Z0-1151-25 dumps are available on Google Drive shared by PrepAwayETE: <https://drive.google.com/open?id=1nD2L7xOJZLbEoMV8X83QSC6iPFVulo-S>

With the number of people who take the exam increasing, the 1Z0-1151-25 exam has become more and more difficult for many people. A growing number of people have had difficulty in preparing for the 1Z0-1151-25 exam, and they have a tendency to turn to the study materials. However, a lot of people do not know how to choose the suitable study materials. We are willing to recommend the 1Z0-1151-25 Exam Questions from our company to you. We can make a promise to you that our study materials will be the best 1Z0-1151-25 study guide for you to prepare for your exam.

Oracle 1Z0-1151-25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Configure Multicloud Connection Options: This section assesses the abilities of Network Engineers in configuring connectivity solutions for OCI multi-cloud environments. It includes setting up secure networking options such as Site-to-Site VPN and FastConnect for seamless cloud integration. Candidates will also learn how to implement Oracle Interconnect services for establishing direct, high-performance connections between OCI and third-party cloud providers like Microsoft Azure and Google Cloud.
Topic 2	• Core OCI Services Overview: This section evaluates the knowledge of Identity and Database Administrators in managing OCI's core services for multi-cloud integration. It covers the implementation of identity federation between OCI Identity Domains and external identity providers, ensuring secure authentication across multiple cloud environments. Candidates will also gain expertise in configuring Virtual Cloud Network (VCN) components and administering OCI database services, including Base Databases, Autonomous Databases, and HeatWave, to support scalable multi-cloud deployments.

Topic 3	• Implement Oracle Database@Google Cloud: This section measures the proficiency of Cloud Database Engineers in utilizing Oracle Database@Google Cloud. It explores the architecture and operational framework for running Oracle databases on Google Cloud. Candidates will learn about onboarding procedures, provisioning resources, and managing database services effectively to optimize performance and availability in a Google Cloud-integrated multi-cloud ecosystem.
Topic 4	• Introduction to Multicloud: This section of the exam measures the skills of Cloud Architects in understanding multicloud environments and their benefits. It covers the reasons organizations adopt multi-cloud strategies, including flexibility, cost optimization, and risk management. Candidates will learn about common multicloud use cases and how they are implemented in Oracle Cloud Infrastructure (OCI) to enhance interoperability and performance.
Topic 5	• Implement Oracle Database@Azure: This section tests the expertise of Database Solutions Architects in deploying and managing Oracle Database@Azure. It covers the architectural components and onboarding processes required for provisioning databases in Azure while maintaining Oracle's advanced database capabilities. Candidates will also focus on configuring high availability and disaster recovery strategies to ensure business continuity and data resilience in a multi-cloud setup.

2025 Marvelous Oracle 1Z0-1151-25 New Practice Questions

The PrepAwayETE is one of the top-rated and trusted platforms that are committed to making the Oracle Cloud Infrastructure 2025 Multicloud Architect Professional (1Z0-1151-25) certification exam journey successful. To achieve this objective PrepAwayETE has hired a team of experienced and qualified Oracle 1Z0-1151-25 Exam trainers. They work together and put all their expertise to maintain the top standard of Oracle Cloud Infrastructure 2025 Multicloud Architect Professional (1Z0-1151-25) practice test all the time.

Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Sample Questions (Q51-Q56):

NEW QUESTION # 51

What is the purpose of Google Cloud Virtual Private Cloud (VPC) in the context of Oracle Database@Google Cloud?

- A. To enable direct connectivity to OCI regions
- **B. To isolate Oracle database services from other Google Cloud resources for security reasons**
- C. To provide public internet access to Oracle database services
- D. To manage billing for Oracle Database@Google Cloud

Answer: B

Explanation:

In Oracle Database@Google Cloud, Google Cloud Virtual Private Cloud (VPC) is used to create an isolated network environment within GCP, securing Oracle database services from other resources. This isolation enhances security by restricting access to the databases and ensuring they operate within a private subnet. Option B contradicts the private nature of the service, while Options C and D are unrelated to VPC's role. Oracle's documentation on Database@Google Cloud emphasizes VPC for network segmentation and security.

NEW QUESTION # 52

What is the purpose of Oracle Interconnect for Google Cloud?

- A. Migrating on-premises workloads to Oracle Cloud
- **B. Establishing a secure, low-latency connection between OCI and GCP**
- C. Hosting Oracle Database on-premises
- D. Managing hybrid cloud deployments involving Oracle Cloud and Azure

Answer: B

Explanation:

Oracle Interconnect for Google Cloud is specifically designed to create a direct, high-bandwidth, low-latency connection between Oracle Cloud Infrastructure (OCI) and Google Cloud Platform (GCP). This interconnect allows customers to run workloads that span both clouds, taking advantage of the best services from each provider.

Here's why the other options are incorrect:

- b). Migrating on-premises workloads to Oracle Cloud: While OCI offers services for migrating on-premises workloads, Oracle Interconnect for Google Cloud is not directly related to this process. It's about connecting two existing cloud environments.
- c). Hosting Oracle Database on-premises: Oracle Interconnect for Google Cloud is about connecting OCI and GCP, both public cloud environments. It has nothing to do with on-premises deployments.
- d). Managing hybrid cloud deployments involving Oracle Cloud and Azure: Oracle Interconnect for Google Cloud is specifically for connecting OCI and GCP. For connecting OCI and Azure, there's a separate offering called Oracle Interconnect for Microsoft Azure.

NEW QUESTION # 53

What BGP IP addresses are necessary when configuring the Oracle virtual circuit in Oracle Interconnect for Azure?

- **A. Both a primary and secondary pair of BGP addresses are required.**
- B. BGP addresses are not required for setting up the Oracle virtual circuit.
- C. Only a primary pair of BGP addresses is required.
- D. Only a secondary pair of BGP addresses is required.

Answer: A

Explanation:

When setting up Oracle Interconnect for Azure, you need both a primary and a secondary pair of BGP (Border Gateway Protocol) IP addresses. These addresses are used to establish BGP peering between the Oracle Cloud Infrastructure (OCI) edge routers and the Azure edge routers.

Here's why both are necessary:

Redundancy and High Availability: The primary and secondary pairs provide redundancy. If the primary connection or its associated BGP session fails, the secondary connection takes over, ensuring continuous connectivity. This is a crucial aspect of a production-grade interconnect.

Why the other options are incorrect:

- a). Only a secondary pair of BGP addresses is required: A secondary pair alone would not establish the initial connection. You need a primary pair to start the BGP peering.
- b). BGP addresses are not required for setting up the Oracle virtual circuit: BGP is essential for dynamic routing and failover in the interconnect. Without BGP, the interconnect would not function as intended.
- d). Only a primary pair of BGP addresses is required: While a primary pair can establish an initial connection, it doesn't provide the necessary redundancy for high availability.

NEW QUESTION # 54

Which tasks are performed in the Azure portal when using Oracle Database@Azure?

- A. Enabling Data Guard for database backups
- B. Provisioning container and pluggable databases
- C. Configuring Oracle database homes
- **D. Managing and maintaining Exadata VM cluster and infrastructure**

Answer: D

Explanation:

In Oracle Database@Azure, the Azure portal is used for managing and maintaining Exadata VM clusters and infrastructure, aligning with its Azure-native management approach. Data Guard (Option A), database homes (Option B), and container/pluggable databases (Option C) are configured post-provisioning, often via database tools, not directly as portal tasks. Oracle's documentation specifies this infrastructure focus in Azure.

NEW QUESTION # 55

What types of metrics can be monitored for Oracle databases using Azure services in Oracle Database@Azure?

- A. Node status, ASM diskgroup utilization, and file system utilization
- B. Block changes, OCPU utilization, and database wait time
- C. Automatic backup configuration and database PSU updates
- D. Invoice payments, storage usage reports, and support rewards

Answer: A

Explanation:

Because Oracle Database@Azure places the Exadata infrastructure within Azure, the monitoring capabilities from the Azure side focus primarily on the infrastructure level. This includes:

Node status: Monitoring the health and availability of the Exadata compute nodes (servers).

ASM diskgroup utilization: Monitoring the storage utilization and performance of the Automatic Storage Management (ASM) diskgroups, which are used by Oracle databases for storage management.

File system utilization: Monitoring the utilization of the file systems on the Exadata storage servers.

These metrics are related to the physical and virtual infrastructure running the database. Azure's monitoring tools are well-suited for this level of monitoring.

Here's why the other options are not the primary focus of Azure monitoring in this context:

- a). Block changes, OCPU utilization, and database wait time: While these are valuable database-level metrics, they are typically monitored using Oracle's own tools (like Oracle Enterprise Manager or database performance monitoring tools) or through OCI's monitoring services if the databases are also registered in the OCI control plane. Azure's focus is on the underlying infrastructure.
- c). Automatic backup configuration and database PSU updates: These are database administration tasks handled through Oracle tools or potentially through OCI's management plane, not directly monitored by Azure.
- d). Invoice payments, storage usage reports, and support rewards: These are related to billing, usage reporting, and support agreements, not performance or health monitoring of the database or infrastructure.

NEW QUESTION # 56

.....

Getting Oracle certification is a good way for you to access to IT field. But you may find that real test questions are difficult and professional and you have no time to prepare the 1Z0-1151-25 valid test. So it is time that our latest dumps torrent and training materials help you get high passing score in the process of 1Z0-1151-25 practice test at your first attempt.
