Oracle 1Z0-1163-1 Exam Syllabus Topics:

Topic	Details
Topic 1	• OMBPs for Innovation: This section evaluates the expertise of Supply Chain Innovation Analysts in leveraging SCM Innovation modules. It focuses on understanding the functionalities that drive product development and improving time-to-market. Candidates will explore key design considerations, best practices, and performance metrics that ensure faster product launches and enhanced innovation processes.
Topic 2	• OMBPs for Order Management: This section evaluates the proficiency of Order Fulfillment Analysts in managing Oracle Cloud's order management modules. It covers the process flow and integration of different components to streamline order processing. Candidates will study key design considerations and metrics related to customer satisfaction, order fulfillment efficiency, and accuracy in managing customer demand.
Topic 3	• OMBPs for Supply Chain Planning: This section assesses the knowledge of Supply Chain Planners in managing planning modules within Oracle SCM. It explains process flows, integration points, and how different planning modules work together. Candidates will learn about best practices for designing efficient planning workflows and key metrics used to measure supply chain responsiveness and effectiveness.
Topic 4	• Oracle Cloud Success Navigator & Oracle Cloud Quality Standards: This section evaluates the skills of Cloud Implementation Managers in leveraging Oracle Cloud Success Navigator and Quality Standards for cloud adoption. It explains how best practices are embedded into Oracle Cloud Applications and applied using Starter Configuration. Candidates will understand how to optimize cloud performance and ensure successful deployments following Oracle's quality guidelines.
Topic 5	• OMBPs for Sustainability: This section assesses the knowledge of Sustainability Specialists in integrating environmental and social responsibility into supply chain and procurement processes. It focuses on the benefits of aligning sustainability goals with business operations, ensuring compliance with global regulations, and implementing eco-friendly best practices.

Topic 6	• OMBPs for Manufacturing: This section measures the skills of Manufacturing Operations Managers in utilizing Oracle Cloud's manufacturing capabilities. It explains the flow of manufacturing processes, module integration, and best practices that enhance operational efficiency. Candidates will analyze metrics that assess productivity, cost control, and overall manufacturing performance.

Crack Your Exam with DumpsKing Oracle 1Z0-1163-1 Practice Questions

The desktop Oracle Fusion Cloud Applications SCM Foundations Associate - Rel 1 (1Z0-1163-1) practice test software is similar to the web-based 1Z0-1163-1 format as far as its features are concerned. But it works offline only on the Windows operating system. The offline 1Z0-1163-1 practice exam can be taken easily just by just installing the software on your Windows laptop or computer. All three Oracle Fusion Cloud Applications SCM Foundations Associate - Rel 1 (1Z0-1163-1) formats of DumpsKing are according to the latest content of the Oracle 1Z0-1163-1 examination.

Oracle Fusion Cloud Applications SCM Foundations Associate - Rel 1 Sample Questions (Q52-Q57):

NEW QUESTION # 52

What is a key feature of the Supply Chain Orchestration process in Oracle Fusion Cloud SCM?

- A. It only manages warehouse operations without linking to procurement or manufacturing.
- B. It provides a manual approach to tracking supply chain transactions.
- C. It automates the execution of supply chain tasks across different applications, ensuring end-to-end process integration.

Answer: C

Explanation:

The Supply Chain Orchestration (SCO) process in Oracle Fusion Cloud SCM is a pivotal feature that automates the execution of supply chain tasks across multiple applications, including procurement, manufacturing, and inventory management. It ensures seamless end-to-end process integration by coordinating activities like order fulfillment, material transfers, and production scheduling. Option A is incorrect because SCO extends beyond warehouse operations to integrate with procurement and manufacturing. Option C is also inaccurate as SCO eliminates manual tracking by leveraging automation, improving efficiency and visibility across the supply chain. This capability reduces delays and enhances coordination, aligning with Oracle's goal of a connected supply chain ecosystem.

NEW QUESTION # 53

What is a primary function of Cost Accounting in Oracle Fusion Cloud SCM?

- A. It prevents any fluctuations in material costs.
- B. It records only customer payments, excluding supplier invoices.
- C. It tracks and analyzes manufacturing costs to support financial reporting and decision-making.

Answer: C

Explanation:

Cost Accounting in Oracle Fusion Cloud SCM is designed to track and analyze costs associated with manufacturing processes, including material, labor, and overhead expenses. This function supports financial reporting by providing detailed cost data and aids decision-making by offering insights into cost drivers and profitability. Option A is incorrect because cost accounting does not prevent fluctuations-it records and manages them. Option B is wrong as it encompasses supplier-related costs, not just customer payments. By maintaining accurate cost records, this module ensures compliance with accounting standards and enables strategic cost management.

NEW QUESTION # 54

Which key metric measures the effectiveness of the Demand to Management OMBP?

- A. Customer Acquisition Cost.
- **B. Forecast Accuracy.**
- C. Employee Turnover Rate.
- D. Order Fill Rate.

Answer: B

Explanation:

The Demand to Management Oracle Manufacturing Business Process (OMBP) in Oracle Fusion Cloud SCM focuses on translating demand signals into actionable supply plans, making Forecast Accuracy the key metric for measuring its effectiveness. Forecast Accuracy compares predicted demand to actual demand, revealing how well the system anticipates customer needs. For instance, if a forecast predicts 1,000 units sold but actual sales are 900, the accuracy is 90%, highlighting areas for improvement. Option A (Employee Turnover Rate) is an HR metric unrelated to demand management. Option C (Customer Acquisition Cost) pertains to marketing, not supply chain processes. Option D (Order Fill Rate) measures fulfillment efficiency, which is a downstream outcome, not a direct indicator of demand forecasting effectiveness. High forecast accuracy ensures inventory aligns with demand, reducing overstock or shortages, and supports strategic decision-making across procurement and production.

NEW QUESTION # 55

What is the purpose of the Available to Promise (ATP) process in Oracle Fusion Cloud SCM?

- A. It manages only supplier payments without impacting inventory levels.
- **B. It ensures product availability commitments based on inventory and supply constraints.**
- C. It guarantees immediate product shipment for all orders.

Answer: B

Explanation:

The Available to Promise (ATP) process in Oracle Fusion Cloud SCM is designed to determine product availability and provide realistic commitments to customers based on current inventory levels and supply constraints, such as production capacity and supplier lead times. ATP calculates how much stock is "available to promise" for new orders by subtracting existing commitments from on-hand inventory and factoring in planned supply. For example, if a warehouse has 50 units of a product, with 20 already allocated to prior orders, ATP shows 30 units available for new promises. Option B is incorrect because ATP has no direct role in managing supplier payments-it focuses on inventory and supply planning. Option C is false as ATP does not guarantee immediate shipment; it provides feasible dates based on availability, not an unrealistic promise of instant delivery. This process supports accurate order promising, prevents stockouts, and aligns customer expectations with operational reality, making it a cornerstone of effective supply chain management.

NEW QUESTION # 56

How does embedding Oracle Method Based Practices (OMBP) in Starter Configurations benefit Oracle Fusion Applications implementations?

- **A. Provides a standard configuration that supports solution-led implementation of Oracle Fusion Applications.**
- B. Allows third-party vendors to access and modify configurations.
- C. Enables fully customized setup based on individual customer requirements.

Answer: A

Explanation:

Embedding Oracle Method Based Practices (OMBPs) in Starter Configurations (C) provides a prebuilt, standard configuration that streamlines Oracle Fusion Applications implementations using a solution-led approach. These configurations incorporate best practices-e.g., predefined workflows for demand planning-reducing setup time and ensuring consistency. For instance, a company can deploy SCM modules with optimized settings out of the box, customizing only where necessary. Option A is incorrect-third-party access isn't a focus; security restricts modifications. Option B is partially true but misses the point-OMBPs standardize first, then allow customization, not the reverse. This approach accelerates deployment, lowers costs, and leverages Oracle's expertise for reliable outcomes.
