

Oracle 1Z0-182 Questions To Make Sure Results [2025]

P.S. Free 2025 Oracle 1Z0-182 dumps are available on Google Drive shared by ExamsReviews: <https://drive.google.com/open?id=1mywvIPSIUchMubHfsmH0n6RSY4kpayp>

The precision and accuracy of ExamsReviews's dumps are beyond other exam materials. They are time-tested and approved by the veteran professionals who recommend them as the easiest way-out for 1Z0-182 certification tests. 1Z0-182 Exam Materials constantly updated by our experts, enhancing them in line with the changing standards of real exam criteria. Therefore, our 1Z0-182 dumps prove always compatible to your academic requirement.

You only need 20-30 hours to learn our 1Z0-182 test torrents and prepare for the exam. After buying our 1Z0-182 exam questions you only need to spare several hours to learn our 1Z0-182 test torrent s and commit yourselves mainly to the jobs, the family lives and the learning. Our answers and questions of 1Z0-182 Exam Questions are chosen elaborately and seize the focus of the exam so you can save much time to learn and prepare the exam. Because the passing rate is high as more than 98% you can reassure yourselves to buy our 1Z0-182 guide torrent.

1Z0-182 Exam Engine | Latest 1Z0-182 Test Camp

Perhaps you agree that strength is very important, but there are doubts about whether our 1Z0-182 study questions can really improve your strength. It does not matter, we can provide you with a free trial version of our 1Z0-182 exam braindumps. You can free download the demos of our 1Z0-182 learning prep easily on our website, and there are three versions according to the three versions of our 1Z0-182 practice engine. It is really as good as we say, you can experience it yourself.

Oracle 1Z0-182 Exam Syllabus Topics:

Topic	Details
Topic 1	Employ Oracle-Supplied Database Tools: This section evaluates the abilities of Database Engineers and Support Specialists in identifying and using Oracle-supplied tools for managing databases. It focuses on leveraging tools to monitor, troubleshoot, and optimize database performance effectively.

Topic 2	Managing Undo: This domain measures the skills of Database Administrators in using undo data effectively. It compares undo data with redo data and explains temporary undo usage for efficient transaction management.
Topic 3	Managing Tablespaces and Datafiles: This section assesses the abilities of Storage Administrators in creating, modifying, and describing tablespaces. It also covers recognizing data storage requirements and understanding datafile placement for efficient storage management.
Topic 4	Introduction to Auditing: This domain tests the abilities of Compliance Specialists in implementing database auditing practices. It includes creating, modifying, and maintaining auditing policies while applying value-based auditing techniques like Fine-Grained Auditing (FGA).
Topic 5	Displaying Creating and Managing PDBs: This section assesses the knowledge of Cloud Database Architects in creating pluggable databases (PDBs) from seeds or other techniques. It also covers modifying PDB modes and attributes to meet specific application requirements.
Topic 6	Configuring Oracle Net Services: This section measures the skills of Network Administrators and Database Administrators in configuring Oracle Net Services. It includes identifying administration components, describing connection methods, and ensuring seamless communication between clients and databases.
Topic 7	Describe Oracle Database Architecture: This section of the exam measures the skills of Database Administrators and System Architects in understanding the Oracle database architecture. It covers the configurations of Oracle database instances, memory structures like SGA and PGA, and process structures such as background processes. It also explains the logical and physical database structures, including datafiles, control files, and redo log files.

Oracle Database 23ai Administration Associate Sample Questions (Q20-Q25):

NEW QUESTION # 20

Which two statements are true about the UNLIMITED TABLESPACE system privilege and space quota?

- A. It allows a role to have unlimited space in any tablespace in the database.
- B. It allows a user to have unlimited space only in their default permanent tablespace.
- C. By default, users have no quota on their default permanent tablespace.
- D. It is overridden by a space quota specified for the user.
- E. It allows a user to have unlimited space in any tablespace in the database.

Answer: D,E

Explanation:

- A .True. Grants unlimited space across all tablespaces.
- B .True. Explicit quotas override the privilege.
- C .False. Not limited to default tablespace.
- D .False. Roles can't have this privilege directly.
- E .False. Default is zero quota unless specified.

NEW QUESTION # 21

Which three Oracle database space management features will work with both Dictionary and Locally managed tablespaces?

- A. Capacity planning growth reports based on historical data in the Automatic Workload Repository (AWR).
- B. Automatic data file extension (AUTOEXTEND).
- C. Oracle Managed Files (OMF).
- D. Online table segment shrink.
- E. Online index segment shrink.

Answer: A,B,C

Explanation:

Dictionary-managed tablespaces (DMTs) use the data dictionary for extent management, while locally managed tablespaces (LMTs) use bitmaps. Let's evaluate compatibility:

A . Capacity planning growth reports based on historical data in the Automatic Workload Repository (AWR).

True. AWR tracks space usage (e.g., DBA_HIST_TBSPC_SPACE_USAGE) regardless of tablespace type, enabling growth reports for both DMTs and LMTs.

Mechanics:MMON collects metrics like segment growth, stored in SYSAUX, accessible via EM or scripts.

Practical Use:Helps predict when to add data files, universal across management types.

B . Online table segment shrink.

False. ALTER TABLE ... SHRINK SPACE requires LMTs with Automatic Segment Space Management (ASSM), unavailable in DMTs, which lack bitmap-based free space tracking.

Why Incorrect:DMTs use freelists, incompatible with shrink operations.

C . Online index segment shrink.

False. Like tables, ALTER INDEX ... SHRINK SPACE requires LMTs with ASSM, not supported in DMTs.

Why Incorrect:Same limitation as B; DMTs can't compact online.

D . Oracle Managed Files (OMF).

True. OMF automates file naming and placement (via DB_CREATE_FILE_DEST) for both DMTs and LMTs, agnostic to extent management.

Mechanics:Example: CREATE TABLESPACE ts1; creates an OMF file in either type.

Edge Case:DMTs are rare in 23ai, but OMF still applies.

E . Automatic data file extension (AUTOEXTEND).

True. AUTOEXTEND ON allows data files to grow as needed, supported in both DMTs and LMTs since early versions.

Mechanics:ALTER DATABASE DATAFILE ... AUTOEXTEND ON NEXT 100M; works universally.

NEW QUESTION # 22

Which two tasks can you perform using DBCA for databases?

- A. Configure a nonstandard block size for a new database.
- B. Register a new database with an available Enterprise Manager Management server.
- C. Configure incremental backups for a new database.
- D. Enable flashback database for an existing database.
- E. Change the standard block size of an existing database.

Answer: A,B

Explanation:

A .False. Backups are configured via RMAN, not DBCA.

B .True. DBCA allows nonstandard block sizes during DB creation.

C .True. DBCA can register new DBs with EM.

D .False. Block size is fixed post-creation.

E .False. Flashback is enabled via SQL, not DBCA for existing DBs.

NEW QUESTION # 23

You execute this command: CREATE BIGFILE TABLESPACE big_tbs DATAFILE 'u01/oracle/data/big_fl.dbf' SIZE 20G; Sufficient storage is available in filesystem/u01. Which two statements are true about the BIG_TBS tablespace?

- A. It will always have a 32K blocksize.
- B. AUTOEXTEND is possible for the datafile.
- C. It will be a dictionary-managed tablespace by default.
- D. It must be bigger than the largest SMALLFILE tablespace.
- E. Additional data files may not be added.

Answer: B,E

Explanation:

A .False. LMT is default in 23ai.

B .True. Bigfile tablespaces have one data file only.

- C .True. AUTOEXTEND works with bigfile data files.
- D .False. Block size defaults to DB_BLOCK_SIZE (e.g., 8K).
- E .False. No size comparison requirement.

NEW QUESTION # 24

Which two statements are true about User Authentication in an Oracle Database?

- A. Password File authentication is supported for any type of database user.
- B. REMOTE_LOGIN_PASSWORDFILE must be set to EXCLUSIVE to permit password changes for system-privileged administrative users.
- C. Operating System authentication may be used for system-privileged administrative users.
- D. Password authentication must be used for system-privileged administrative users.
- E. Password File authentication must be used for system-privileged administrative users.

Answer: C,E

Explanation:

User authentication in Oracle 23ai determines how users (especially administrative ones) connect to the database. Let's analyze each option with extensive detail:

A . Operating System authentication may be used for system-privileged administrative users.

True. OS authentication allows users mapped to OS accounts (e.g., ops\$oracle) to connect without a password, often used for administrative users like SYS or SYSTEM. This is configured by creating an externally authenticated user (e.g., CREATE USER "OPS\$ORACLE" IDENTIFIED EXTERNALLY) and relies on the OS to verify identity.

Mechanics:When a user logs in via sqlplus / as sysdba, Oracle checks the OS user against the dba group (Unix) or ORA_DBA (Windows). If matched, no password is needed, leveraging OS security.

Practical Use:Common for DBAs managing local instances, reducing password management overhead.

Edge Case:Requires REMOTE_LOGIN_PASSWORDFILE=NONE for exclusive OS auth, but this isn't mandatory if a password file exists alongside.

Historical Note:Introduced in early Oracle versions, this remains a robust option in 23ai for local admin access.

B . Password authentication must be used for system-privileged administrative users.

False. "Must" is incorrect; password authentication (e.g., sqlplus sys/password) is an option, not a requirement. OS authentication or password file authentication can also be used for users like SYS. This option overstates the necessity of password-based login.

Why Incorrect:Oracle's flexibility allows multiple methods, contradicting the absolute phrasing here.

C . Password File authentication is supported for any type of database user.

False. Password file authentication is restricted to users with SYSDBA, SYSOPER, or similar system privileges (e.g., SYSBACKUP). Regular users (e.g., HR) can't use the password file (orapw<sid>); they rely on database authentication (passwords stored in the DB) or external methods.

Mechanics:The password file stores hashed credentials for privileged users, checked during remote AS SYSDBA logins.

Why Incorrect:Extending this to "any user" ignores Oracle's security model limiting password file usage.

D . REMOTE_LOGIN_PASSWORDFILE must be set to EXCLUSIVE to permit password changes for system-privileged administrative users.

False. REMOTE_LOGIN_PASSWORDFILE=EXCLUSIVE allows a dedicated password file for one instance, enabling password changes via ALTER USER SYS IDENTIFIED BY newpass. However, SHARED mode also permits changes for SYS, though not for other users added to the file. The "must" overstates the requirement; it's sufficient, not necessary.

Mechanics:EXCLUSIVE locks the file to one DB, while SHARED allows multiple DBs to use it, with restrictions on non-SYS users.

E . Password File authentication must be used for system-privileged administrative users.

True. For remote administrative access (e.g., sqlplus sys/password@orcl as sysdba), a password file is mandatory when REMOTE_LOGIN_PASSWORDFILE is EXCLUSIVE or SHARED. Local OS authentication is an alternative, but for network-based admin tasks, the password file is required, making this statement true in that context.

Mechanics:Set via orapwd (e.g., orapwd file=orapworcl password=oracle entries=10), enabling remote SYSDBA logins.

Edge Case:If REMOTE_LOGIN_PASSWORDFILE=NONE, only OS auth works locally, but this isn't the default or typical setup.

NEW QUESTION # 25

.....

Candidates who pass 1Z0-182 Certification prove their worth in the Oracle field. The Oracle Database 23ai Administration

Associate certification is proof of their competence and skill. This skill is highly useful in big Oracle companies that facilitate a candidate's career. To get certified, it is very important that you pass the Oracle Database 23ai Administration Associate certification exam to prove your skills to the tech company. For this task, you require high-quality and accurate prep material to help you out. And many people don't get reliable material and ultimately fail. Failure leads to a loss of time and money.
