2025 1Z0-770: Marvelous Oracle APEX Developer Professional Online Exam

Our 1Z0-770 practice materials are suitable for exam candidates of different degrees, which are compatible whichever level of knowledge you are in this area. These 1Z0-770 training materials win honor for our company, and we treat 1Z0-770 test engine as our utmost privilege to help you achieve your goal. Meanwhile, you cannot divorce theory from practice, but do not worry about it, we have stimulation 1Z0-770 Test Questions for you, and you can both learn and practice at the same time.

Oracle APEX Developer Professional Sample Questions (Q29-Q34):

NEW QUESTION # 29
Select the two advantages of using One-click Remote Deployment.

- A. You need to access your production environment to import the app directly.
- B. Directly deploy your app definition along with the objects from the source system to the target system
- C. Deploy the app, and explicitly install the supporting objects in one-click.
- D. Simplify the process of deploying an application

Answer: B,C

Explanation:
Explanation
One-click remote application deployment is a feature in Oracle APEX that simplifies the process of deploying an application from

one APEX instance to another using REST Enabled SQL references. REST Enabled SQL references are shared components that work with an Oracle REST Data Services (ORDS) REST Enabled SQL Service. One-click remote application deployment can authenticate through first party authentication (Basic Authentication), Schema Authentication (database username and password), or OAuth 2 Client Credentials.

Two of the advantages of using one-click remote application deployment are:

Deploy the app, and explicitly install the supporting objects in one-click. This advantage allows you to package the app definition along with the database objects, images, and seed data necessary for your application to run correctly using the Supporting Objects functionality in APEX. You can then export and deploy this app and install the supporting objects in one-click without having to manually create or copy the database objects in the target system.

Directly deploy your app definition along with the objects from the source system to the target system.

This advantage allows you to avoid the intermediate step of exporting the app and its objects from the source system into files and then importing them into the target system. You can directly deploy your app and its objects from within your development environment to the remote production environment without having to access your production environment.

NEW QUESTION # 30

Generally, clicking on the hamburger menu in the upper-left corner of an APEX application displays a list of pages. What is this navigation called?

- A. Breadcrumbs
- B. Lists
- C. Navigation Menu
- D. Navigation Bar List

Answer: C

Explanation:
Explanation
The navigation menu is the list of pages that displays when you click on the hamburger menu in the upper-left corner of an APEX application. The navigation menu is a shared component that can be created and edited in the Shared Components page3. Lists, breadcrumbs, and navigation bar entries are other types of navigation components in APEX, but they are not the same as the navigation menu.

NEW QUESTION # 31

Which is a valid Page Process type?

- A. Set Value
- B. Execute JavaScript Code
- C. Send E-Mail

Answer: A

Explanation:
Explanation
A page process type defines what action the page process performs when it is executed. There are many page process types available in Oracle APEX, such as Execute PL/SQL Code, Data Loading, Branch, etc. One of the valid page process types is Set Value. The Set Value page process type sets session state for an item or items on a page using a computation or PL/SQL expression. You can use this page process type to assign values to items based on logic or conditions. The other options are not valid page process types. Execute JavaScript Code is a dynamic action type, not a page process type. Send E-Mail is an application process type, not a page process type. Verified References: [Understanding Page Processes - Oracle Help Center], [Set Value Process Type - Oracle Help Center]

NEW QUESTION # 32

Which statement is true about creating and using a report with form?

- A. The Create Application Wizard doesn't support the creation of an interactive report and form combination.
- B. In the Create Application Wizard, you can select a data source (that is, Local Database, REST Enabled SQL Service, or REST Data Source).

- C. The Create Page Wizard doesn't support the creation of a classic report and form combination
- D. Both the Create Application Wizard and Create Page Wizard support the creation of an interactive report or classic report and form combination.

Answer: D

Explanation:
Explanation
You can create a report with form in Oracle APEX by using either the Create Application Wizard or the Create Page Wizard. The report can be either an interactive report or a classic report, and the form can be either a single row form or a multi row form. The report with form combination enables you to view and edit data from a table or a query in a single page. You can also customize the report and form attributes, such as the columns, regions, buttons, validations, processes, and so on. Verified References: [Creating a Report Using the Create Page Wizard - Oracle], [Creating a Report with Form on Table - Oracle]

NEW QUESTION # 33
From SQL Workshop, you can perform which two of the following actions?

- A. Create and view database objects
- B. Delete database
- C. Run SQL commands and scripts
- D. Create an APEX user

Answer: A,C

Explanation:
Explanation
From SQL Workshop, you can perform the following actions:
Run SQL commands and scripts: You can use SQL Commands or SQL Scripts components to run individual SQL statements or PL/SQL blocks interactively or in batch mode. You can also view the results, errors, or explain plans of your commands or scripts.
Create and view database objects: You can use Object Browser component to view and manage the database objects in your schema, such as tables, views, indexes, etc. You can also use this component to create new objects, modify existing objects, drop objects, or run object reports.
The other options are incorrect because:
Create an APEX user: You cannot use SQL Workshop to create an APEX user. You can use Workspace Administration component to create and manage users in your workspace.
Delete database: You cannot use SQL Workshop to delete database. You can only delete database objects such as tables or views from your schema.
Verified References: [About SQL Workshop] [Using SQL Commands] [Using SQL Scripts] [Using Object Browser] [Managing Workspace Users]

NEW QUESTION # 34
......

The APP online version of the 1Z0-770 exam questions can provide you with exam simulation. And the good point is that you don't need to install any software or app. All you need is to click the link of the online 1Z0-770 training material for one time, and then you can learn and practice offline. If our 1Z0-770 Study Material is updated, you will receive an E-mail with a new link. You can follow the new link to keep up with the new trend of 1Z0-770 exam.
