## 1Z0-770 Questions | Latest 1Z0-770 Test Answers

Immediately after you have made a purchase for our 1Z0-770 practice dumps, you can download our 1Z0-770 study materials to make preparations. It is universally acknowledged that time is a key factor in terms of the success. The more time you spend in the preparation for 1Z0-770 Training Materials, the higher possibility you will pass the exam. And with our 1Z0-770 study torrent, you can get preparations and get success as early as possible.

Oracle 1Z0-770 certification exam is a computer-based exam that consists of 60 multiple-choice questions. Candidates have 105 minutes to complete the exam. The passing score for the exam is 63%, and candidates receive their score immediately after completing the exam. 1Z0-770 Exam is available in English and is offered at Oracle testing centers worldwide.

### Oracle APEX Developer Professional Sample Questions (Q78-Q83):

#### NEW QUESTION # 78

Which two Query Source types can be used to create a dynamic Navigation Bar List?

- A. SQL Query
- B. Function Returning SQL Query
- C. Select List
- D. Procedure

**Answer: A,B**

Explanation:

Explanation

The Query Source types for a Navigation Bar List are SQL Query and Function Returning SQL Query. These types allow you to define the list entries using a SQL statement or a PL/SQL function that returns a SQL statement. The other options, Select List and Procedure, are not valid for a Navigation Bar List. Verified References: Create Page Wizard: Navigation Bar List Attributes Creating Lists

#### NEW QUESTION # 79

Which two statements are true about Faceted Search pages?

- A. Multiple charts are not visible in the same region.
- B. A facet's chart can be seen only in a nonmodal dialog.
- C. Facets map to specific database columns.
- D. Faceted Search supports the ability to filter columns storing multiple values as one string.

**Answer: C,D**

Explanation:

Explanation

Faceted Search is a feature that allows end users to filter data by applying one or more facets. A facet is a set of filters based on a column or expression. Faceted Search supports the ability to filter columns storing multiple values as one string, such as comma-separated values or JSON arrays, by using the Split Values attribute. Facets map to specific database columns or expressions that are defined in the Data Source attribute of the faceted search region. The other statements are false because Faceted Search supports displaying multiple charts in the same region by using the Chart View attribute, and a facet's chart can be seen either in a nonmodal dialog or inline by using the Chart Display Mode attribute. Verified References: [Creating Faceted Search Pages - Oracle Help Center], [Facet Attributes - Oracle APEX]

### NEW QUESTION # 80

What are the three types of Master Detail Form you can create in APEX?

- A. Stacked
- B. Two Page Drill Down
- C. Side by Side
- D. One Below the other

**Answer: A,B,C**

Explanation:

Explanation

A master detail form is a type of form that enables users to query, insert, update, and delete values from two related tables or views. A master detail form reflects a one-to-many relationship between tables in a database.

Typically, a master detail form displays a master row and multiple detail rows. In APEX, you can create three types of master detail forms using the Create Page Wizard or the Create Application Wizard:

**Stacked:** A stacked master detail form contains a single page with editable interactive grids based on two related tables or views. Users select a row in the master grid to update the detail grid. Developers can create a stacked master detail with either the Create Application Wizard or the Create Page Wizard.

**Side by Side:** A side by side master detail form contains a single page with two editable interactive grids based on two related tables or views. Users can see and edit both the master and detail grids at the same time. Developers can create a side by side master detail with either the Create Application Wizard or the Create Page Wizard.

**Two Page Drill Down:** A two page drill down master detail form contains two pages based on two related tables or views. The first page is a non-editable interactive grid for the master table. Users click the Edit icon on the first page to edit details on the second page. The second page includes both a standard form for the master and an editable interactive grid for the detail. Developers can create a two page drill down master detail with only the Create Page Wizard.

### NEW QUESTION # 81

Examine this code entered in Quick SQL:

```
emp_salary  
name vc255  
salary num  
commission yn/check TRUE, FALSE
```

Which statement is true about the commission yn column?

- A. It will restrict acceptable values to Y or N.
- B. It will default to FALSE.
- C. It will default to TRUE.
- D. It will restrict acceptable values to TRUE or FALSE.

**Answer: D**

Explanation:

Explanation

The commission yn column will restrict acceptable values to TRUE or FALSE because of the /check modifier in the column name. This modifier adds a check constraint to the column based on the values specified after it.

The yn suffix indicates that the column is of type VARCHAR2(1). The other options are incorrect because they do not reflect the effect of the /check modifier or the yn suffix. Verified References: Using Quick SQL About Quick SQL Shorthand Syntax

### NEW QUESTION # 82

Generally, clicking on the hamburger menu in the upper-left corner of an APEX application displays a list of pages. What is this navigation called?

- A. Breadcrumbs
- B. Lists
- C. Navigation Bar List
- D. Navigation Menu

**Answer: D**

Explanation:

Explanation

The navigation menu is the list of pages that displays when you click on the hamburger menu in the upper-left corner of an APEX application. The navigation menu is a shared component that can be created and edited in the Shared Components page<sup>3</sup>. Lists, breadcrumbs, and navigation bar entries are other types of navigation components in APEX, but they are not the same as the navigation menu.
