

Oracle 1Z0-931-25 Exam Cram Review, Detailed 1Z0-931-25 Answers

2025 Latest DumpExam 1Z0-931-25 PDF Dumps and 1Z0-931-25 Exam Engine Free Share: <https://drive.google.com/open?id=1byldjn80WATvRihmgicxlcu13kMZBOP>

The advent of our 1Z0-931-25 study guide with three versions has helped more than 98 percent of exam candidates get the certificate successfully. Rather than insulating from the requirements of the 1Z0-931-25 real exam, our 1Z0-931-25 practice materials closely co-related with it. And their degree of customer's satisfaction is escalating. Besides, many exam candidates are looking forward to the advent of new 1Z0-931-25 versions in the future.

Our Oracle Autonomous Database Cloud 2025 Professional (1Z0-931-25) practice exam simulator mirrors the 1Z0-931-25 exam experience, so you know what to anticipate on 1Z0-931-25 certification exam day. Our Oracle Autonomous Database Cloud 2025 Professional (1Z0-931-25) practice test software features various question styles and levels, so you can customize your Oracle 1Z0-931-25 exam questions preparation to meet your needs.

Detailed 1Z0-931-25 Answers - 1Z0-931-25 Real Exam Answers

To help you prepare well, we offer three formats of our Oracle 1Z0-931-25 exam product. These formats include Oracle 1Z0-931-25 PDF dumps, Desktop Practice Tests, and web-based Oracle 1Z0-931-25 practice test software. Your selection on the right tool to help you pass the 1Z0-931-25 Exam and get the according certification matters a lot for the right 1Z0-931-25 exam braindumps will spread you a lot of time and efforts.

Oracle Autonomous Database Cloud 2025 Professional Sample Questions (Q111-Q116):

NEW QUESTION # 111

Which native data type is used to store spatial information?

- A. SDO_RELATE
- B. GEO_JSON
- C. SDO_LOCATION
- D. SDO_GEOMETRY

Answer: D

Explanation:

Oracle Database supports spatial data with a dedicated data type:

Correct Answer (A): SDO_GEOMETRY is the native data type for storing spatial information, such as points, lines, and polygons, in a structured format compatible with spatial queries and operations.

Incorrect Options:

B: SDO_LOCATION is not a valid data type; it may be a confusion with SDO_GEOMETRY.

C: SDO_RELATE is a spatial operator for relationship analysis, not a storage type.

D: GEO_JSON is a format for spatial data, not a native Oracle data type (though it can be parsed into SDO_GEOMETRY).

This type enables advanced geospatial functionality.

NEW QUESTION # 112

You are the admin user of an Autonomous Database instance. A new business analyst has joined the team and would like to explore the Autonomous Database tables using Autonomous Database's Data Tools. Which step should you perform to enable the new team member?

- A. Create a database user with the default privileges.
- B. Create an IDCS user and create a database user with connect, resource, and object privileges.
- C. Create a REST-enabled database user (with connect and object privileges) and grant the DWROLE role.
- D. Create a database user with connect, resource, and object privileges.

Answer: C

Explanation:

Full Detailed In-Depth Explanation:

To enable a business analyst to use Autonomous Database Data Tools (e.g., Data Load, SQL Developer Web), specific permissions are required:

REST-enabled user: Data Tools rely on REST APIs, necessitating a user with REST support enabled.

Connect and object privileges: These allow database access and interaction with tables.

DWROLE role: This predefined role grants a comprehensive set of privileges for data analysis tasks in Autonomous Data Warehouse (ADW), including SELECT, EXECUTE, and data loading capabilities.

Evaluating the options:

A: Correct. Creating a REST-enabled user with connect/object privileges and granting DWROLE ensures full access to Data Tools, tailored for ADW exploration.

B: Incorrect. Default privileges are minimal and insufficient for Data Tools usage.

C: Incorrect. While connect, resource, and object privileges provide basic access, they lack the REST enablement and DWROLE's specific analysis permissions.

D: Incorrect. An IDCS (Identity Cloud Service) user is for OCI authentication, not database-level access, and this step overcomplicates the process.

NEW QUESTION # 113

What is the correct way to list all files in the default data pump directory?

- A. Log onto ADW server and issue ls -al on the command line
- B. You cannot list files in the default data pump directory from Autonomous Data Warehouse (ADW)
- C. By executing `SELECT * FROM DBMS_CLOUD.LIST_FILES('DATA_PUMP_DIR');`
- D. By executing `SELECT * FROM UTL_FILE.LIST('DATA_PUMP_DIR');`

Answer: C

Explanation:

In Oracle Autonomous Database, the DBMS_CLOUD package provides tools to interact with cloud storage and directory operations, including listing files in the default Data Pump directory (DATA_PUMP_DIR).

Correct Answer (A): The statement `SELECT * FROM DBMS_CLOUD.LIST_FILES('DATA_PUMP_DIR');` is the officially supported method to list files in the DATA_PUMP_DIR. This function returns a result set with details about files in the specified directory, tailored for the managed environment of Autonomous Database.

Incorrect Options:

B: This is false; you can list files in DATA_PUMP_DIR using DBMS_CLOUD.LIST_FILES, as it is designed for this purpose in ADW.

C: The UTL_FILE package is not recommended for Autonomous Database due to its limitations in a cloud-managed environment. DBMS_CLOUD is the preferred utility for such operations. Additionally, the syntax `UTL_FILE.LIST` is incorrect; the proper

procedure would be UTL_FILE.FGETATTR or similar, but it's still not applicable here.

D: Autonomous Database is a fully managed service, and users do not have direct command-line access to the underlying server. Commands like ls -al are unavailable as there's no shell access.

This approach ensures secure and efficient file management within the constraints of a serverless cloud database.

NEW QUESTION # 114

Which of the following two statements are correct? (Choose two.)

- A. Data Transforms Card provides access to Oracle Data Integrator (ODI) Web Edition.
- B. ODI Web Edition is available only on Oracle Linux.
- C. All capabilities of ODI Classic are available with ODI Web Edition.
- D. ODI Web Edition can be installed from Oracle Cloud Infrastructure (OCI) Marketplace.

Answer: C,D

Explanation:

Oracle Data Integrator (ODI) Web Edition integrates with Autonomous Database:

Correct Answer (B): "ODI Web Edition can be installed from Oracle Cloud Infrastructure (OCI) Marketplace" is true. It's offered as a Marketplace image for easy deployment on OCI compute instances.

Correct Answer (D): "All capabilities of ODI Classic are available with ODI Web Edition" is correct; the web version retains full functionality for data integration tasks.

Incorrect Options:

A: ODI Web Edition is not limited to Oracle Linux; it runs on various platforms supported by OCI.

C: The Data Transforms Card in Database Actions uses a simplified UI, not full ODI Web Edition access.

This enhances data integration flexibility in the cloud.

NEW QUESTION # 115

Which terminology is used to refer to a communication channel for sending messages to a subscription, such as email or SMS, in Oracle Cloud Infrastructure?

- A. Subject
- B. Topic
- C. Event
- D. Notification

Answer: B

Explanation:

In Oracle Cloud Infrastructure (OCI), the Notifications service is used to send messages (e.g., via email, SMS, or HTTP endpoints) to subscribers. The correct terminology for the communication channel is:

Topic (C): A "topic" in OCI Notifications is the named entity that acts as a communication channel. Publishers send messages to a topic, and subscribers (e.g., email addresses, SMS numbers, or custom endpoints) receive those messages based on their subscription to that topic. For example, you might create a topic called "DatabaseAlerts" to send notifications about database events. When a message is published to this topic, all subscribed endpoints (e.g., an email like user@example.com) receive it. This design follows a publish-subscribe (pub/sub) model, making "topic" the central concept for message distribution.

The incorrect options are:

Subject (A): The "subject" is a field within a message (e.g., the subject line of an email), not the channel itself. It describes the content of an individual notification but doesn't define the mechanism for sending it. For instance, an email notification might have a subject like "Database Maintenance Scheduled," but the topic is the channel delivering it.

Notification (B): A "notification" refers to the actual message being sent (the payload), not the channel through which it travels. It's the output of the process, not the infrastructure enabling it. For example, a notification might be "Database is down," but it's sent via a topic.

Event (D): An "event" is an occurrence or trigger (e.g., a database failover) that might generate a notification, but it's not the channel. Events are inputs that can be monitored by services like OCI Events, which then publish to a topic in Notifications.

The use of "topic" aligns with OCI's architecture for scalable, decoupled messaging. To illustrate, you'd create a topic in the OCI console under "Notifications," configure subscriptions (e.g., email or SMS), and then use APIs or triggers to publish messages to it. This abstraction ensures flexibility and reliability in message delivery across various protocols.
