

Oracle certification 1Z0-1084-25 the latest exam questions and answers

DOWNLOAD the newest Exam-Killer 1Z0-1084-25 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=17YD8t_q9neOaaFB7Rv0rpA71TdqA-8Q4

There are three different versions for all customers to choose. The three different versions include the PDF version, the software version and the online version, they can help customers solve any questions and meet their all needs. Although the three different versions of our 1Z0-1084-25 study materials provide the same demo for all customers, they also have its particular functions to meet different the unique needs from all customers. The most important function of the online version of our 1Z0-1084-25 Study Materials is the practicality. The online version is open to any electronic equipment, at the same time, the online version of our 1Z0-1084-25 study materials can also be used in an offline state.

We will provide you with professional advice before you buy our 1Z0-1084-25 guide materials. If you have problems in the process of using our 1Z0-1084-25 study questions, as long as you contact us anytime and anywhere, we will provide you with remote assistance until that all the problems on our 1Z0-1084-25 Exam Braindumps are solved. When you send us a message, we will reply immediately and we will never waste your precious time on studying our 1Z0-1084-25 practice quiz.

Valid Relevant 1Z0-1084-25 Questions | Latest Oracle 1Z0-1084-25 Test Simulator Online: Oracle Cloud Infrastructure 2025 Developer Professional

It can be difficult to prepare for the Oracle Cloud Infrastructure 2025 Developer Professional (1Z0-1084-25) certification test when you're already busy with daily tasks. But, you can successfully prepare for the examination despite your busy schedule if you choose updated and real Oracle 1Z0-1084-25 exam questions. We believe that success in the test depends on studying with Oracle Cloud Infrastructure 2025 Developer Professional (1Z0-1084-25) Dumps questions. We have hired a team of professionals who has years of experience in helping test applicants acquire essential knowledge by providing them with Oracle 1Z0-1084-25 actual exam questions.

Oracle 1Z0-1084-25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Testing and Securing Cloud-Native Applications: This section focuses on testing strategies and security for cloud-native applications. It discusses different testing methodologies, securing sensitive information using OCI Vault, and implementing security measures to address cloud-native development challenges.
Topic 2	• Leveraging Serverless Technologies for Cloud Native Development: This section of the exam measures the skills of professionals in serverless development within OCI. It covers creating serverless applications using Oracle Functions, building API gateways for routing traffic, and integrating systems through OCI Streaming Service. Additionally, it explores event-driven architectures using OCI Event Service and how OCI Queue enables asynchronous messaging between microservices.
Topic 3	• Cloud Native Fundamentals: This section of the exam measures the skills of target audience and covers the essential principles of cloud-native development. It explains the core concepts, key pillars, and advantages of cloud-native applications. The section also focuses on microservices architecture, including its design methodology and how it supports scalable, distributed applications.
Topic 4	• Cloud Native Applications and Containerization: This section of the exam covers containerization technologies for cloud-native applications. It explains Docker architecture, its components, and the process of pulling and pushing container images using Oracle Cloud Infrastructure Registry (OCIR). It also explores container orchestration, deploying applications on Oracle Kubernetes Engine (OKE), and using OCI Service Mesh for Kubernetes deployments.
Topic 5	• Monitoring & Troubleshooting Cloud-Native Applications: This section of the exam focuses on monitoring and troubleshooting cloud-native applications. It covers using OCI Monitoring to track metrics, OCI Logging for managing logs and performing tasks related to monitoring, logging, and tracing for better observability and issue resolution.

Oracle Cloud Infrastructure 2025 Developer Professional Sample Questions (Q70-Q75):

NEW QUESTION # 70

You have just finished building and compiling the software required to implement the API microservice component. You need to rebuild the API docker image, and plan to tag it as: ocidevops/apilatest Which docker command would re-create the API docker image?

- A. docker create -t OCidevops/apilatest
- B. docker image -t OCidevops/apilatest
- C. docker compile -t OCI devops/apilatest
- **D. docker build -t OCidevops/apilatest**

Answer: D

Explanation:

The correct command to rebuild the API docker image and tag it as OCidevops/apilatest is: docker build -t OCidevops/apilatest
The docker build command is used to build a Docker image from a Dockerfile. The -t flag is used to specify the name and optionally a tag for the image. In this case, the name of the image is OCidevops/api and the tag is latest. By running this command, the Docker image will be recreated based on the instructions in the Dockerfile and tagged with the specified name and tag.

NEW QUESTION # 71

A developer has created another version of a microservice and wants 10% of the traffic to flow towards it for testing purposes. The application is already configured using OCI (Oracle Cloud Infrastructure) Service Mesh. Which of the following steps is the right approach to achieve this goal?

- A. Create a new Kubernetes deployment for the new version of the microservice and set the traffic splitting percentage to 10% in the Kubernetes service manifest.
- B. Use Kubernetes HPA (Horizontal Pod Autoscaler) to scale the new version of the microservice to handle 10% of the traffic automatically.

- C. Create a new entry in the routeRules field of the virtual service route table manifest to configure traffic splitting between the old and new versions of the microservice and set the percentage to 10%.
- D. Create a new entry in the routeRules field of the ingress gateway route table manifest to configure traffic splitting between the old and new versions of the microservice and set the percentage to 10%.

Answer: C

NEW QUESTION # 72

You have created a repository in Oracle Cloud Infrastructure Registry (OCIR) in the us-ashburn-1 (iad) region in your tenancy with the heyoci namespace. Which three are valid tags for an image named myapp? (Choose three.)

- A. iad.ccir.io/heyoci/myapp:latest
- B. us-ashburn-1.ocir.io/heyoci/myproject/myapp:0.0.2-beta
- C. us-ashburn-1.ocir.io/myproject/heyoci/myapp:latest
- D. us-ashburn-1.ocir.io/heyoci/myapp:0.0.2-beta
- E. iad.ocir.io/heyoci/myapp:0.0.2-beta
- F. iad.ocir.io/heyoci/myproject/myapp:0.0.1

Answer: A,B,F

Explanation:

(OPT) iad.ocir.io/myproject/heyoci/myapp:latest The three valid tags for an image named myapp in the heyoci namespace of the Oracle Cloud Infrastructure Registry (OCIR) in the us-ashburn-1 (iad) region are: iad.ccir.io/heyoci/myapp:latest This tag specifies the latest version of the myapp image in the heyoci namespace in the iad region. iad.ocir.io/heyoci/myapp:0.0.2-beta This tag specifies version 0.0.2-beta of the myapp image in the heyoci namespace in the iad region. us-ashburn-1.ocir.io/heyoci/myapp:0.0.2-beta This tag specifies version 0.0.2-beta of the myapp image in the heyoci namespace in the us-ashburn-1 region. The other options mentioned are not valid tags for the given scenario: us-ashburn-1.ocir.io/heyoci/myapp:0.0.2-beta (incorrect format, missing the namespace) iad.ocir.io/myproject/heyoci/myapp:latest (incorrect format, incorrect order of namespace and project) us-ashburn-1.ocir.io/myproject/heyoci/myapp:latest (incorrect format, incorrect order of namespace and project) The correct format for tagging an image in OCIR is <region>.ocir.io/<namespace>/<repository>:<tag>.

NEW QUESTION # 73

Your Oracle Cloud Infrastructure (OCI) Container Engine for Kubernetes (OKE) administrator has created an OKE cluster with one node pool in a public subnet. You have been asked to provide a log file from one of the nodes for troubleshooting purpose. Which step should you take to obtain the log file?

- A. SSH into the nodes using the private key.
- B. Use the username opc and password to login.
- C. SSH into the node using the public key.
- D. It is impossible because OKE is a managed Kubernetes service.

Answer: A

Explanation:

To obtain a log file from one of the nodes in an Oracle Cloud Infrastructure (OCI) Container Engine for Kubernetes (OKE) cluster, you should SSH into the nodes using the private key. Here's the step-by-step process: Obtain the private key: The private key is required to authenticate and access the nodes in the OKE cluster. You should obtain the private key from your administrator or the appropriate key pair used to create the cluster. SSH into the node: Use a secure shell (SSH) client, such as OpenSSH, to connect to the desired node in the cluster. The SSH command typically includes the private key file path and the public IP address or hostname of the node. Example command: `ssh -i <private_key_file> opc@<node_public_ip>` Replace <private_key_file> with the path to the private key file and <node_public_ip> with the public IP address of the node you want to access. Navigate to the log file location: Once you have successfully connected to the node, navigate to the directory where the log file is located. The exact location and name of the log file may vary depending on the Kubernetes distribution and configuration. Copy or view the log file: You can either copy the log file from the node to your local machine using the scp command or view the contents directly on the node using tools like cat or less. By following these steps, you will be able to access the log file from the desired node in the OKE cluster for troubleshooting purposes.

NEW QUESTION # 74

Which statement accurately describes the Oracle Cloud Infrastructure (OCI) Load Balancer integration with OCI Container Engine for Kubernetes (OKE)?

- A. OCI Load Balancer instance provisioning is triggered by the OCI Events service for each Kubernetes service with LoadBalancer type in the YAML configuration.
- **B. OKE service provisions an OCI Load Balancer instance for each Kubernetes service with LoadBalancer type in the YAML configuration.**
- C. OKE service provisions a single OCI Load Balancer instance shared with all the Kubernetes services with LoadBalancer type in the YAML configuration.
- D. OCI Load Balancer instance must be manually provisioned for each Kubernetes service that requires traffic balancing.

Answer: B

Explanation:

The statement that accurately describes the Oracle Cloud Infrastructure (OCI) Load Balancer integration with OCI Container Engine for Kubernetes (OKE) is: "OKE service provisions an OCI Load Balancer instance for each Kubernetes service with LoadBalancer type in the YAML configuration." When you define a Kubernetes service in your YAML configuration with the LoadBalancer type, the OKE service automatically provisions an OCI Load Balancer instance specifically for that service. This Load Balancer instance is dedicated to the Kubernetes service and provides traffic balancing functionality. Each Kubernetes service that requires load balancing will have its own OCI Load Balancer instance provisioned by OKE.

NEW QUESTION # 75

.....

As far as our 1Z0-1084-25 practice test is concerned, the PDF version brings you much convenience with regard to the following two aspects. On the one hand, the PDF version contains demo where a part of questions selected from the entire version of our 1Z0-1084-25 test torrent is contained. In this way, you have a general understanding of our actual prep exam, which must be beneficial for your choice of your suitable exam files. On the other hand, our 1Z0-1084-25 Preparation materials can be printed so that you can study for the exams with papers and PDF version. With such benefits, why don't you have a try?
