

Oracle - Efficient 1z0-076 - Oracle Database 19c: Data Guard Administration Certification Exam Dumps

2025 Latest PrepAwayExam 1z0-076 PDF Dumps and 1z0-076 Exam Engine Free Share: https://drive.google.com/open?id=18kWUCsi5etic00rf7_SxEaC2PgbWkIVO

Research indicates that the success of our highly-praised 1z0-076 test questions owes to our endless efforts for the easily operated practice system. Most feedback received from our candidates tell the truth that our 1z0-076 guide torrent implement good practices, systems as well as strengthen our ability to launch newer and more competitive products. In fact, you can totally believe in our 1z0-076 Test Questions for us 100% guarantee you pass exam. If you unfortunately fail in the exam after using our 1z0-076 test questions, you will also get a full refund from our company by virtue of the proof certificate.

PrepAwayExam's Oracle exam practice test content is tested and approved by the best industry experts and is constantly updated to meet the requirements of the actual 1z0-076 exam questions. PrepAwayExam reputation is established particularly with an outstanding success rate of 99.1%. This boosts up our popularity graph among the ambitious professionals who want to enrich their profiles with the most prestigious 1z0-076 certifications. Above all, your success is ensured with 100% PrepAwayExam money back guarantee. If our 1z0-076 test dumps do not help you pass exam paper, we shall refund your money in full.

Pass Guaranteed Efficient Oracle - 1z0-076 Certification Exam Dumps

Just like the saying goes, it is good to learn at another man's cost. In the process of learning, it is more important for all people to have a good command of the method from other people. The Oracle Database 19c: Data Guard Administration exam questions from our company will help you find the good study method from other people. Using the 1z0-076 Test Guide from our company, you can not only pass your exam, but also you will have the chance to learn about the different and suitable study skills. We believe these skills will be very useful for you near life.

Oracle 1z0-076 Exam Syllabus Topics:

Topic	Details
Topic 1	Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.
Topic 3	Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.

Topic 4	• Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.
Topic 5	• Creating a Logical Standby Database: This topic guides users through the process of creating and managing a logical standby database, including SQL Apply filtering.
Topic 6	• Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.
Topic 7	• Managing Physical Standby Files After Structural Changes on the Primary Database: The topic covers managing structural changes in the primary database and their impact on physical standby files.
Topic 8	• Patching and Upgrading Databases in a Data Guard Configuration: This section provides guidance on patching and upgrading databases in a Data Guard environment, along with performance optimization techniques and monitoring considerations.
Topic 10	• Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.
Topic 11	• Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.
Topic 12	• Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.

Oracle Database 19c: Data Guard Administration Sample Questions (Q106-Q111):

NEW QUESTION # 106

Your current Data Guard environment consists of:

A primary database containing no abstract data types used for user tables.

Two separate remote physical standby databases used for reporting.

Examine these requirements for adding a new standby database to this Data Guard environment:

The new standby database must provide a disaster recovery solution.

There must be minimal additional performance overheads on the primary database.

The new standby database may require additional indexes and materialized views not present in the primary.

New tables or schemas may be required in the standby database that are not present in the primary.

What would you recommend to fulfill these requirements?

- A. A physical standby database with synchronous redo transport and Real-Time Query enabled.
- B. A logical standby database with synchronous redo transport and redo apply on.
- **C. A logical standby database with asynchronous redo transport and SQL apply on.**
- D. A logical standby database with synchronous redo transport and SQL apply on.
- E. A physical standby database with asynchronous redo transport and Real-Time Query enabled.

Answer: C

NEW QUESTION # 107

You are using Data Guard in conjunction with Global Database Services.

You have a Data Guard Broker configuration called Sales and a GDS pool called Prod.

Which three are true concerning the management of the broker configuration when using GDS?

- **A. DGMGRL may be used to add the Sales configuration to the Prod pool in gds.**
- B. Adding a database to the Sales configuration with DGMGRL automatically adds the database to the Prod Pool.

- C. Performing a role change with DGMGRL automatically notifies GDS which in turn activates the appropriate services.
- D. Adding a database to the Sales configuration with DGMGRL requires that the Sales configuration be disabled first. It must then be enabled after the new database is added to the configuration.
- E. DGMGRL may be used to add a single database to the Sales configuration even if Sales is a member of the Prod pool.

Answer: A,C,E

Explanation:

In the context of Oracle Data Guard and Global Database Services (GDS):

DGMGRL may be used to add the Sales configuration to the Prod pool in gds (A): Data Guard Broker's command-line interface DGMGRL can be utilized to manage configurations with GDS, allowing the addition of Data Guard Broker configurations to GDS pools.

Performing a role change with DGMGRL automatically notifies GDS which in turn activates the appropriate services (B): When a role change is executed using DGMGRL, GDS is automatically notified, and it then activates the services that are appropriate for the new database roles.

DGMGRL may be used to add a single database to the Sales configuration even if Sales is a member of the Prod pool (C):

DGMGRL provides the capability to manage individual databases within a broker configuration, including adding databases to a configuration that is already part of a GDS pool.

NEW QUESTION # 108

Your Data Guard environment consists of these components and settings:

1. A primary database
2. A remote physical standby database
3. Real-time query is enabled.
4. The redo transport mode is set to SYNC.
5. The protection mode is set to Maximum Availability.

You notice that queries executed on the physical standby database receive errors: ORA-03172:

STANDBY_MAX_DATA_DELAY of 15 seconds exceeded. Which two would you recommend to avoid this error?

- A. Increase the number of standby redo log files on the primary database.
- B. Increase the size of the buffer cache on the standby database instance.
- C. Reduce I/O latency for the storage used by the primary database.
- D. Increase the network bandwidth between the primary and standby databases.
- E. Change the protection mode to Maximum Performance.
- F. Change the protection mode to Maximum Protection.

Answer: C,D

Explanation:

The ORA-03172: STANDBY_MAX_DATA_DELAY error indicates that the real-time query on the physical standby database is experiencing delays beyond the specified maximum data delay threshold. Increasing the network bandwidth (Option E) can enhance the speed at which redo data is transferred from the primary to the standby database, thereby reducing the likelihood of exceeding the STANDBY_MAX_DATA_DELAY threshold. Reducing I/O latency on the primary database's storage (Option B) ensures that redo data is generated and shipped more efficiently, further mitigating the risk of delay. These actions, focused on optimizing data transfer and processing speed, address the root causes of the ORA-03172 error in a synchronous Data Guard configuration operating in Maximum Availability mode.

NEW QUESTION # 109

You must configure an Oracle Data.....

1. A primary database
2. A physical standby database

Examine these requirements: 1. Data loss is not permitted.

1. Data loss is not permitted.
2. It should be possible to convert the physical standby database to a snapshot standby database.
3. Under normal operations, transactions should commit when redo is written to disk on the primary database and as soon as it has been received by the standby database instance.

4. The availability of the primary database should not be compromised by the availability of the standby database.
 5. It should be possible to convert the physical standby database to a logical standby database
 6. It should be possible to deploy Real Application Clusters on the primary database.
 7. It should be possible to deploy Real Application Clusters on the physical standby database.
- You configure SYNC redo transport mode in combination with Maximum Protection mode.

- A. 1, 2, and 5
- **B. 1, 2, 3, 4, 5, 6, and 7**
- C. 1, 2, 6, and 7
- D. 1, 2, 3, 6, and 7
- E. 1, 6, and 7

Answer: B

Explanation:

When SYNC redo transport mode is combined with Maximum Protection mode, it ensures that no data loss will occur (requirement 1). The physical standby can be converted to a snapshot standby (requirement 2) and later to a logical standby database (requirement 5), satisfying both transformation requirements. Transactions commit as soon as redo data is received by the standby database (requirement 3). The availability of the primary is not dependent on the standby database in Maximum Protection mode, as the primary database will halt if the standby cannot acknowledge the redo (requirement 4), thus indirectly ensuring its availability. It is also possible to deploy Real Application Clusters on both the primary (requirement 6) and the physical standby database (requirement 7), providing high availability and scalability.

References Oracle Data Guard documentation detailing the requirements for different database roles, protection modes, and redo transport modes, as well as the capabilities and limitations of each configuration.

NEW QUESTION # 110

Which two are prerequisites for configuring Transaction Guard in a Data Guard environment?

- **A. Grant execute permission on the DBMS_APP_CONT package to relevant database schema owners.**
- B. Create a database service with COMMIT_OUTCOME set to TRUE and ensure that the service is statically registered with the default listener on the primary host.
- **C. Create a database service with COMMIT_OUTCOME set to TRUE, and ensure clients use that service to connect to the database instance.**
- D. Ensure that connection descriptors for database clients use the failover clause with the COMMIT_OUTCOME parameter set to TRUE.
- E. Set INSTANCE_NAME identically on all the Data Guard Configuration databases and modify the local service name on the client to include a CONNECTION_LIST containing all the standby hosts.

Answer: A,C

NEW QUESTION # 111

.....

The hit rate for 1z0-076 exam guide is as high as 99%. Obviously such positive pass rate will establish your confidence as well as strengthen your will to pass your 1z0-076 exam. No other vendors can challenge our data in this market. At the same time, by studying with our 1z0-076 practice materials, you avoid wasting your precious time on randomly looking for the key point information. We provide a smooth road for you to success.
