## Oracle Data Platform 2025 Foundations Associate Sample Questions (Q44-Q49):

### NEW QUESTION # 44

A customer wants to use Oracle Cloud Infrastructure (OCI) for storing application backups which can be stored for months, but retrieved immediately based on business needs. Which OCI storage service can be used to meet this requirement?

- A. Archive Storage
- B. Block Volume
- C. File Storage
- D. Object Storage (standard)**

### Answer: D

Explanation:

For storing application backups that need to be "stored for months, but retrieved immediately," "Object Storage (standard)" (A) is the suitable OCI service. Standard Object Storage offers durable, scalable storage with immediate access, ideal for backups requiring quick retrieval. "Archive Storage" (B) is cheaper but has retrieval delays, unsuitable for immediate access. "File Storage" (C) is for shared file systems, and "Block Volume" (D) is for high-performance attached storage, both less suited for long-term backups. Oracle's OCI Storage documentation confirms Standard Object Storage for this use case.

### NEW QUESTION # 45

Which of the following has expanded flexibility with shared or dedicated Exadata infrastructure?

- A. Oracle Database Cloud Service
- B. Oracle Autonomous Database
- C. Oracle Exalogic Cloud Service

- D. Oracle Exadata Cloud Service

**Answer: D**

Explanation:

"Oracle Exadata Cloud Service" (B) offers expanded flexibility with shared or dedicated Exadata infrastructure, allowing customers to choose between cost-effective shared resources or isolated dedicated hardware for performance and compliance needs. "Oracle Database Cloud Service" (A) is VM-based and lacks Exadata's hardware integration, "Oracle Autonomous Database" (C) is fully managed without hardware choice, and "Oracle Exalogic Cloud Service" (D) is an outdated middleware platform, not database-focused. Oracle's documentation highlights Exadata Cloud Service's deployment options.

#### NEW QUESTION # 46

In order to support multicloud strategies, what is offered as an industry first by Oracle?

- A. Dedicated cloud region
- B. Private and public cloud network
- C. Cloud databases
- D. Oracle FastConnect

**Answer: A**

Explanation:

Oracle offers a "Dedicated cloud region" (D) as an industry-first feature to support multicloud strategies. This allows customers to run a fully managed OCI region within their own data center or a partner cloud, integrating with other providers like Azure or AWS. "Private and public cloud network" (A) is vague, "Cloud databases" (B) are common across vendors, and "Oracle FastConnect" (C) is a connectivity service, not unique to multicloud. Oracle's documentation highlights the Dedicated Region as a pioneering multicloud solution.

#### NEW QUESTION # 47

What are two characteristics of Oracle SQLcl (SQL Developer Command Line)?

- A. Ability to execute SQL batch files
- B. Creates isolated development environments
- C. Tracks database schema changes
- D. Available in the OCI Cloud Shell by default

**Answer: A,C**

Explanation:

"Oracle SQLcl" (SQL Developer Command Line) is a lightweight, command-line interface for interacting with Oracle Databases. It has two key characteristics: "Tracks database schema changes" (B), through integration with tools like Liquibase, allowing DBAs to monitor and manage schema evolution; and "Ability to execute SQL batch files" (C), enabling automation of multiple SQL statements in scripts. "Creates isolated development environments" (A) is not a feature of SQLcl, as it's a client tool, not a virtualization platform. "Available in the OCI Cloud Shell by default" (D) is incorrect, as OCI Cloud Shell provides a general terminal but does not pre-install SQLcl. Oracle's SQLcl documentation confirms these capabilities.

#### NEW QUESTION # 48

The DBA has determined that the number of OCPU assigned to an Autonomous Database does not provide sufficient performance. Which option does the DBA have in this case?

- A. Open the database in OCI Console and increase the number of OCPU. No downtime required
- B. Plan for a one-hour downtime and increase the number of OCPU while database is offline
- C. Call Oracle Cloud Support and raise a request to increase number of OCPU. Expect a downtime of approximately one hour
- D. No downtime is required as number of OCPU can be increased from OCI console, but users have to be informed that they must not use any application for at least one hour

**Answer: A**

#### Explanation:

For an "Autonomous Database," the DBA can "Open the database in OCI Console and increase the number of OCPU. No downtime required" (C). Autonomous Database supports dynamic scaling of OCPUs online, with no service interruption, leveraging its self-managing capabilities. Options A and B involve unnecessary downtime, and D adds an unneeded user restriction. Oracle's documentation confirms zero-downtime OCPU scaling as a key feature.
