XK0-005 test questions, XK0-005 dumps torrent, XK0-005 pdf

The company is preparing for the test candidates to prepare the XK0-005 study materials professional brand, designed to be the most effective and easiest way to help users through their want to get the test XK0-005 certification and obtain the relevant certification. In comparison with similar educational products, our training materials are of superior quality and reasonable price, so our company has become the top enterprise in the international market. Our XK0-005 Study Materials have been well received by the users, mainly reflected in the following advantages.

CompTIA Linux+ Certification Exam Sample Questions (Q812-Q817):

NEW QUESTION # 812

A junior systems administrator is scanning archive.tar files with an antivirus scanner. The administrator is given the following tasks:

- List all files that are in the archive.tar files.
- Extract all files from the archive.tar files.

Which of the following actions should be performed to meet these requirements? (Choose two.)

- A. tar -uvz archive.tar
- B. tar -xf archive.tar
- C. tar -A archive.tar
- D. tar -tvf archive.tar
- E. tar -av archive.tar
- F. tar -r archive.tar

Answer: B,D

Explanation:

Listing Tar Archives

When used with the `--list (-t)` option, the tar command lists the content of a tar archive without extracting it.

```
$ tar -tf archive.tar
```

Extracting Tar Archive

Most of the archived files in Linux are archived and compressed using a tar or tar.gz format.

Knowing how to extract these files from the command line is important.

```
$ tar -xf archive.tar
```

<https://linuxize.com/post/how-to-create-and-extract-archives-using-the-tar-command-in-linux/>

NEW QUESTION # 813

A Linux administrator was asked to run a container with the httpd server inside. This container should be exposed at port 443 of a Linux host machine while it internally listens on port 8443. Which of the following commands will accomplish this task?

- A. `podman run -d -p 443:8443 httpd`
- B. `podman exec -p 8443:443 httpd`
- C. `podman run -d -p 8443:443 httpd`
- D. `podman run -d -e 443:8443 httpd`

Answer: A

NEW QUESTION # 814

A systems administrator is customizing a new Linux server. Which of the following settings for umask would ensure that new files have the default permissions of `-rw-r--r--`?

- A. 0038
- B. 0017
- C. 0640
- D. 0027

Answer: D

Explanation:

The umask determines the default permission for new files. To get `-rw-r--r--` (644), the umask should be set to 0027. This sets the permissions to allow read and write for the owner, read-only for the group, and no permissions for others.

NEW QUESTION # 815

Which of the following commands is used to configure the default permissions for new files?

- A. `sudo`
- B. `setenforce`
- C. `umask`
- D. `chmod`

Answer: C

Explanation:

The user mask (umask) feature defines the default permissions Linux assigns to the file or directory. The user mask is an octal value that represents the bits to be removed from the octal mode 666 permissions for files or the octal mode 777 permissions for directories.

NEW QUESTION # 816

A Linux administrator has installed a web server, a database server, and a web application on a server. The web application should be active in order to render the web pages. After the administrator restarts the server, the website displays the following message in the browser: Error establishing a database connection. The Linux administrator reviews the following relevant output from the `systemd` init files:

```
[Unit]
Description=The Apache #HTTP Server
Wants=httpd-init.service
After=network.target remote-fs.target nss-lookup.target httpd-init.service mariadb.service

[Unit]
Description=MariaDB 10.5 database server
After=network.target
```

The administrator needs to ensure that the database is available before the web application is started. Which of the following should the administrator add to the HTTP server .service file to accomplish this task?

- A. **REQUIRES=mariadb.service**
- B. TRIGGERS=mariadb.service
- C. ONFAILURE=mariadb.service
- D. WANTEDBY=mariadb.service

Answer: A

Explanation:

The administrator should add **REQUIRES=mariadb.service** to the HTTP server .service file to ensure that the database is available before the web application is started. This directive specifies that the HTTP server unit requires the MariaDB server unit to be started before it can run. If the MariaDB server unit fails to start or stops for any reason, the HTTP server unit will also fail or stop. This way, the dependency between the web application and the database is enforced by systemd.

NEW QUESTION # 817

.....

Three versions for XK0-005 exam materials are available, and you can choose the most suitable one according to your own needs. XK0-005 PDF version is printable, and if you like the hard one, you can print them into paper. XK0-005 Soft test engine supports MS operating system, and it can install in more than 200 computers, and it can also stimulate the real exam environment, so that you know the procedures for the exam. XK0-005 Online soft test engine is convenient and easy to learn, and it has testing history and performance review, and you can have a review what you have learnt.
