# Palo Alto Networks NGFW-Engineer Discount - NGFW-Engineer Download Demo

If you choose to sign up to participate in Palo Alto Networks certification NGFW-Engineer exams, you should choose a good learning material or training course to prepare for the examination right now. Because Palo Alto Networks Certification NGFW-Engineer Exam is difficult to pass. If you want to pass the exam, you must have a good preparation for the exam.

## Palo Alto Networks NGFW-Engineer Exam Syllabus Topics:

| Topic | Details |
|---|---|
| Topic 1 | • Integration and Automation: This section measures the skills of Automation Engineers in deploying and managing Palo Alto Networks NGFWs across various environments. It includes the installation of PA-Series, VM-Series, CN-Series, and Cloud NGFWs. The use of APIs for automation, integration with third-party services like Kubernetes and Terraform, centralized management with Panorama templates and device groups, as well as building custom dashboards and reports in Application Command Center (ACC) are key topics. |
| Topic 2 | • PAN-OS Device Setting Configuration: This section evaluates the expertise of System Administrators in configuring device settings on PAN-OS. It includes implementing authentication roles and profiles, and configuring virtual systems with interfaces, zones, routers, and inter-VSYS security. Logging mechanisms such as Strata Logging Service and log forwarding are covered alongside software updates and certificate management for PKI integration and decryption. The section also focuses on configuring Cloud Identity Engine User-ID features and web proxy settings. |
| Topic 3 | • PAN-OS Networking Configuration: This section of the exam measures the skills of Network Engineers in configuring networking components within PAN-OS. It covers interface setup across Layer 2, Layer 3, virtual wire, tunnel interfaces, and aggregate Ethernet configurations. Additionally, it includes zone creation, high availability configurations (active<br>• active and active<br>• passive), routing protocols, and GlobalProtect setup for portals, gateways, authentication, and tunneling. The section also addresses IPSec, quantum-resistant cryptography, and GRE tunnels. |

## NGFW-Engineer Download Demo | Reliable NGFW-Engineer Braindumps Sheet

With the principles of serve first and customers first, we will company you during you whole preparation. We offer you free demo before buying NGFW-Engineer exam dumps of us, and you can get your downloading link and password when you finish your payment. And you can get them about ten minutes after your payment. What's more, we have free update for one year after purchasing, and the updated version will send to your email automatically. If you have any questions about the NGFW-Engineer

Exam Dumps, you can consult our online service stuff.

# Palo Alto Networks Next-Generation Firewall Engineer Sample Questions (Q11-Q16):

**NEW QUESTION # 11**
An NGFW engineer is configuring multiple Layer 2 interfaces on a Palo Alto Networks firewall, and all interfaces must be assigned to the same VLAN. During initial testing, it is reported that clients located behind the various interfaces cannot communicate with each other.
Which action taken by the engineer will resolve this issue?

- A. Assign each interface to the appropriate Layer 2 zone and configure Security policies for interfaces not assigned to the same zone.
- B. Configure each interface to belong to the same Layer 2 zone and enable IP routing between them.
- C. Assign each interface to the appropriate Layer 2 zone and configure a policy that allows traffic within the VLAN.
- D. Enable IP routing between the interfaces and configure a Security policy to allow traffic between interfaces within the VLAN.

**Answer: C**

Explanation:
In a Layer 2 configuration, interfaces are typically grouped into the same Layer 2 zone. When the interfaces are assigned to the same VLAN, the firewall will treat them as part of the same broadcast domain.
In a Layer 2 setup, interfaces must be in the same Layer 2 zone to allow the traffic within the same VLAN to pass. Additionally, a security policy must be configured to allow traffic within this VLAN or zone. This will resolve the issue by ensuring that traffic is permitted between clients behind different interfaces assigned to the same VLAN.

**NEW QUESTION # 12**
Which type of firewall resource can be assigned when configuring a new firewall virtual system (VSYS)?

- A. Sessions limit
- B. ICPU
- C. Security profile limit
- D. Memory

**Answer: A**

Explanation:
When configuring a new firewall virtual system (VSYS) on a Palo Alto Networks firewall, one of the resources that can be assigned is the sessions limit. This setting allows the administrator to control the number of active sessions that can be handled by the VSYS, ensuring that each virtual system has an appropriate allocation of resources based on its needs.

**NEW QUESTION # 13**
Which type of firewall resource can be assigned when configuring a new firewall virtual system (VSYS)?

- A. Sessions limit
- B. ICPU
- C. Security profile limit
- D. Memory

**Answer: A**

Explanation:
When configuring a new firewall virtual system (VSYS) on a Palo Alto Networks firewall, one of the resources that can be assigned is the sessions limit. This setting allows the administrator to control the number of active sessions that can be handled by the VSYS, ensuring that each virtual system has an appropriate allocation of resources based on its needs.

**NEW QUESTION # 14**

An organization has configured GlobalProtect in a hybrid authentication model using both certificate-based authentication for the pre-logon stage and SAML-based multi-factor authentication (MFA) for user logon.

How does the GlobalProtect agent process the authentication flow on Windows endpoints?

- A. The GlobalProtect agent uses the machine certificate to establish a pre-logon tunnel; upon user sign-in, it prompts for SAML-based MFA credentials, ensuring both device and user identities are validated before granting full access.
- B. The GlobalProtect agent uses the machine certificate during pre-logon for initial tunnel establishment, and then seamlessly reuses the same machine certificate for user-based authentication without requiring MFA.
- C. Once the machine certificate is validated at pre-logon, the Windows endpoint completes MFA on behalf of the user by passing existing Windows Credential Provider details to the GlobalProtect gateway without prompting the user.
- D. GlobalProtect requires the user to log in first for SAML-based MFA before establishing the pre-logon tunnel, rendering the pre-logon certificate authentication (CA) flow redundant.

**Answer: A**

Explanation:
In a hybrid authentication model with both certificate-based authentication for pre-logon and SAML-based multi-factor authentication (MFA) for user logon, the GlobalProtect agent processes the flow as follows:
During the pre-logon stage, the agent uses the machine certificate to authenticate and establish the initial VPN tunnel.
Once the user logs in (after the machine is connected), the agent then triggers SAML-based MFA to ensure the user is authenticated with multi-factor authentication, validating both the device and the user identity before granting full access.
This method ensures that both the device and user are properly authenticated and validated in the hybrid authentication model.

**NEW QUESTION # 15**

When configuring a Zone Protection profile, in which section (protection type) would an NGFW engineer configure options to protect against activities such as spoofed IP addresses and split handshake session establishment attempts?

- A. Reconnaissance Protection
- B. Packet-Based Attack Protection
- C. Protocol Protection
- D. Flood Protection

**Answer: C**

Explanation:
In the context of a Zone Protection profile, Protocol Protection is the section used to configure protections against activities such as spoofed IP addresses and split handshake session establishment attempts. These types of attacks typically involve manipulating protocol behaviors, such as IP address spoofing or session hijacking, and are mitigated by the Protocol Protection settings.
