When we are in some kind of learning web site, often feel dazzling, because web page design is not reasonable, put too much information all rush, it will appear desultorily. Absorbing the lessons of the PCNSE study materials, will be all kinds of qualification examination classify layout, at the same time on the front page of the PCNSE study materials have clear test module classification, so clear page design greatly convenient for the users, can let users in a very short period of time to find what they want to study, and then targeted to study. Saving the precious time users already so, also makes the PCNSE Study Materials look more rich, powerful strengthened the practicability of the products, to meet the needs of more users, to make the PCNSE study materials stand out in many similar products.

What is the duration of the PCNSE Exam

- Format: Multiple choices, multiple answers
- Length of Examination: 80 minutes
- Number of Questions: 75

Skills Tested in PCNSE Exam

A test like this covers aspects of the Palo Alto Networks network security platform that a firewall administrator needs to know. This includes designing, installing, configuring, maintaining, and troubleshooting the vast majority of Palo Alto Networks executions. Particularly, the topics are related to PAN-OS® software, Panorama, GlobalProtect, and other aspects. All in all, you be tested to ascertain that:

- You are capable of planning, deploying, operating, configuring, and troubleshooting Palo Alto Networks Product portfolio components.
- You have an in-depth understanding of the Palo Alto Networks product portfolio's unique aspects and how to deploy it appropriately.
- You have an in-depth understanding of the security features and policies for networking used by PAN-OS.

Reliable PCNSE Exam Questions, Valid PCNSE Test Discount

TroytecDumps releases 100% pass-rate Palo Alto Networks PCNSE study guide files which guarantee candidates 100% pass exam in the first attempt. It is time for you to choose a valid Palo Alto Networks PCNSE study guide, this will be your best method for clearing exam and obtain a certification. Good PCNSE Study Guide will be a shortcut for you to well-directed prepare and practice efficiently, you will avoid do much useless efforts and do something interesting.

The PCNSE Certification Exam is a comprehensive exam that tests a candidate's knowledge and skills across a range of topics, including Palo Alto Networks security technologies and solutions, network security concepts, firewall technologies, security policies and profiles, and troubleshooting network security issues. Passing the exam demonstrates that a candidate has the expertise to design, deploy, configure, and manage Palo Alto Networks security solutions, which can help them advance their career and increase their value to their organization.

Palo Alto Networks Certified Network Security Engineer Exam Sample Questions (Q308-Q313):

NEW QUESTION # 308
Based on the routing and interface information below, what should the NAT rule destination zone be set to?

- A. DMZ
- B. None
- C. Outside
- D. Inside

Answer: C

NEW QUESTION # 309
What are three tasks that cannot be configured from Panorama by using a template stack?
(Choose three)

- A. enable operational modes such as normal mode, multi-vsys mode, or FIPS-CC mode
- B. change the firewall management IP address
- C. configure a device block list
- D. add administrator accounts
- E. rename a vsys on a multi-vsys firewall

Answer: A,C,E

Explanation:
https://docs.paloaltonetworks.com/panorama/11-0/panorama-admin/manage-firewalls/manage- templates-and-template-stacks/template-capabilities-and-exceptions

NEW QUESTION # 310

Several offices are connected with VPNs using static IPv4 routes. An administrator has been tasked with implementing OSPF to replace static routing.
Which step is required to accomplish this goal?

- A. Assign an IP address on each tunnel interface at each site.
- B. Enable OSPFv3 on each tunnel interface and use Area ID 0.0.0.0
- C. Create new VPN zones at each site to terminate each VPN connection.
- D. Assign OSPF Area 0.0.0.0 to all Ethernet and tunnel interfaces.

Answer: D

Explanation:
OSPF Area Types include the Backbone Area, Area 0, is the core of an OSPF network. The backbone has the reserved area ID of 0.0.0.0. All other areas are connected to it and all traffic between areas must traverse it. All routing between areas is distributed through the backbone area. While all other OSPF areas must connect to the backbone area, this connection doesn't need to be direct and can be made through a virtual link.

NEW QUESTION # 311
Which log type will help the engineer verify whether packet buffer protection was activated?

- A. Configuration
- B. Data Filtering
- C. Traffic
- D. Threat

Answer: D

Explanation:
The log type that will help the engineer verify whether packet buffer protection was activated is Threat Logs. Threat Logs are logs generated by the Palo Alto Networks firewall when it detects a malicious activity on the network. These logs contain information about the source, destination, and type of threat detected. They also contain information about the packet buffer protection that was activated in response to the detected threat. This information can help the engineer verify that packet buffer protection was activated and determine which actions were taken in response to the detected threat.
Packet buffer protection is a feature that prevents packet buffer exhaustion by dropping packets, discarding sessions, or blocking source IP addresses when the packet buffer utilization exceeds a certain threshold. The firewall records these events in the threat log with different threat IDs and names1. The system log also records an alert event when the packet buffer congestion reaches the alert threshold2. The other types of logs do not show packet buffer protection events. Reference: 1:
https://docs.paloaltonetworks.com/pan-os/10-2/pan-os-admin/zone-protection-and-dos-protection/zone-defense/packet-buffer-protection 2: https://docs.paloaltonetworks.com/pan-os/10-2/pan-os-admin/monitoring/use-syslog-for-monitoring/syslog-field-descriptions/system-log-fields

NEW QUESTION # 312
A company wants to install a PA-3060 firewall between two core switches on a VLAN trunk link. They need to assign each VLAN to its own zone and to assign untagged (native) traffic to its own zone which options differentiates multiple VLAN into separate zones?

- A. Create V-Wire objects with two V-Wire interfaces and define a range of "0-4096 in the "Tag Allowed" field of the V-Wire object.
- B. Create VLAN objects for each VLAN and assign VLAN interfaces matching each VLAN ID. Repeat for every additional VLAN and use a VLAN ID of 0 for untagged traffic. Assign each interface/sub interface to a unique zone.
- C. Create Layer 3 subinterfaces that are each assigned tA. single VLAN ID and a common virtual router.
  The physical Layer 3 interface would handle untagged traffic. Assign each interface/subinterface tA.
  unique zone. Do not assign any interface an IP address.
- D. Create V-Wire objects with two V-Wire subinterfaces and assign only a single VLAN ID to the Tag Allowed" field of the V-Wire object. Repeat for every additional VLAN and use a VLAN ID of 0 for untagged traffic. Assign each iinterface/sub interface to a unique zone.

Answer: D

Explanation:
Explanation
https://docs.paloaltonetworks.com/pan-os/9-0/pan-os-admin/networking/configure-interfaces/virtual-wire-interfaces/vlan-tagged-traffic
Virtual wire interfaces by default allow all untagged traffic. You can, however, use a virtual wire to connect two interfaces and configure either interface to block or allow traffic based on the virtual LAN (VLAN) tags. VLAN tag 0 indicates untagged traffic. You can also create multiple subinterfaces, add them into different zones, and then classify traffic according to a VLAN tag or a combination of a VLA N tag with IP classifiers (address, range, or subnet) to apply granular policy control for specific VLAN tags or for VLAN tags from a specific source IP address, range, or subnet.
