CyberArk Defender - PAM Sample Questions (Q201-Q206):

NEW QUESTION # 201

Which service should NOT be running on the DR Vault when the primary Production Vault is up?

- A. CyberArk Logical Container
- B. PrivateArk Database
- C. PrivateArk Server
- D. CyberArk Vault Disaster Recovery (DR) service

Answer: C

NEW QUESTION # 202

Which CyberArk group does a user need to be part of to view recordings or live monitor sessions?

- A. Auditors
- B. DR Users
- C. Vault Admin
- D. Operators

Answer: A

Explanation:

Explanation

To view recordings or live monitor sessions, users must be part of the Auditors group or have the appropriate permissions in the relevant Account Safes and Recording Safes¹². The other groups do not have the necessary permissions to access the recordings or monitor the sessions by default. References: Monitor Active Sessions, Active Session Monitoring

NEW QUESTION # 203

Can the 'Connect' button be used to initiate an SSH connection, as root, to a Unix system when SSH access for root is denied?

- A. No, it is not possible.
- B. Yes, when using the connect button, CyberArk uses the PMTerminal.exe process which bypasses the root SSH restriction.
- C. Yes, only if a logon account is associated with the root account and the user connects through the PSM-SSH connection component.
- D. Yes, if a logon account is associated with the root account.

Answer: C

NEW QUESTION # 204

PTA can automatically suspend sessions if suspicious activities are detected in a privileged session, but only if the session is made via the CyberArk PSM.

- A. True
- B. False, the PTA can suspend sessions whether the session is made via the PSM or not

Answer: B

NEW QUESTION # 205

Which of the Following can be configured in the Master Policy? Choose all that apply.

- A. Ticketing Integration
- B. Required Properties
- C. Exclusive Passwords
- D. Dual Control
- E. Password Aging Rules
- F. Password Reconciliation
- G. Custom Connection Components
- H. One Time Passwords

Answer: C,D,E,H

Explanation:

Explanation

The Master Policy is a centralized overview of the security and compliance policy of privileged accounts in the organization. It allows the administrator to configure compliance driven rules that are defined as the baseline for the enterprise. The Master Policy includes the following main concepts¹:

* Basic policy rules: These rules allow the administrator to define specific aspects of privileged account management, such as privileged access workflows, password management, session monitoring and auditing.

* Advanced policy rules: Some basic policy rules have related advanced settings that provide more granular control over the policy enforcement.

* Exceptions: These are policy rules that differ from the overall Master Policy for a specific scope of accounts, such as accounts associated with a specific platform.

The Master Policy rules are divided into four sections²:

* Privileged Access Workflows: These rules define how the organization manages access to privileged accounts, such as requiring dual control, one-time passwords, exclusive passwords, transparent connections, reason for access, etc.

* Password Management: These rules determine how passwords are managed, such as requiring password change, password verification, password reconciliation, ticketing integration, required properties, custom connection components, etc.

* Session Management: These rules determine whether or not privileged sessions are recorded and how they are monitored, such as requiring session isolation, session recording, session audit, etc.

* Audit: This rule determines how Safe audits are retained, such as specifying the audit retention period.

Based on the above information, the following options can be configured in the Master Policy:

* A. Dual Control: This is a basic policy rule in the Privileged Access Workflows section that determines whether users need to get approval from authorized users before accessing a privileged account².

* B. One Time Passwords: This is a basic policy rule in the Privileged Access Workflows section that determines whether users can only use a password once before it is changed².

* C. Exclusive Passwords: This is a basic policy rule in the Privileged Access Workflows section that determines whether users need to check out a password and prevent other users from accessing it until it is checked in².

* H. Password Aging Rules: This is a basic policy rule in the Password Management section that determines how often passwords need to be changed².

The following options cannot be configured in the Master Policy:

* D. Password Reconciliation: This is not a policy rule, but a process that restores the password of a privileged account to the value that is stored in the Vault, in case it is changed or out of sync³.

* E. Ticketing Integration: This is not a policy rule, but a feature that enables the integration of the Vault with external ticketing systems, such as ServiceNow, Jira, etc.

* F. Required Properties: This is not a policy rule, but a platform setting that determines which properties are mandatory for adding accounts to a platform.

* G. Custom Connection Components: This is not a policy rule, but a platform setting that determines which connection components are used to connect to target systems, such as PVWA, PSM, PSMP, etc.

References:

* 1: The Master Policy

* 2: Master Policy Rules

* 3: Password Reconciliation

* : Ticketing Integration

* : Required Properties

* : Custom Connection Components

NEW QUESTION # 206

.....
