

PAP-001 Free Brain Dumps - PAP-001 Exam Objectives

If you want to understand our PAP-001 exam prep, you can download the demo from our web page. You do not need to spend money; because our PAP-001 test questions provide you with the demo for free. You just need to download the demo of our PAP-001 exam prep according to our guiding; you will get the demo for free easily before you purchase our products. By using the demo, we believe that you will have a deeply understanding of our PAP-001 Test Torrent. We can make sure that you will like our products; because you will it can help you a lot.

Ping Identity PAP-001 Exam Syllabus Topics:

Topic	Details
Topic 1	• Security: This section of the exam measures skills of Security Administrators and highlights how to manage certificates and certificate groups. It covers the association of certificates with virtual hosts or listeners and the use of administrator roles for authentication management.
Topic 2	• Installation and Initial Configuration: This section of the exam measures skills of System Engineers and reviews installation prerequisites, methods of installing or removing PingAccess, and securing configuration database passwords. It explains the role of run.properties entries and outlines how to set up a basic on-premise PingAccess cluster.
Topic 3	• Product Overview: This section of the exam measures skills of Security Administrators and focuses on understanding PingAccess features, functionality, and its primary use cases. It also covers how PingAccess integrates with other Ping products to support secure access management solutions.
Topic 4	• Policies and Rules: This section of the exam measures the skills of Security Administrators and focuses on how PingAccess evaluates paths for applying policies and resources. It covers the role of different rule types, their configuration, and the implementation of rule sets and rule set groups for consistent policy enforcement.

Topic 5	Integrations: This section of the exam measures skills of System Engineers and explains how PingAccess integrates with token providers, OAuth and OpenID Connect configurations, and site authenticators. It also includes the use of agents and securing web, API, and combined applications through appropriate integration settings.

PAP-001 Exam Objectives, Valid PAP-001 Test Discount

We have free demos of our PAP-001 study materials for your reference, as in the following, you can download which PAP-001 exam materials demo you like and make a choice. We have three versions of our PAP-001 exam guide, so we have according three versions of free demos. Therefore, if you really have some interests in our PAP-001 Study Materials, then trust our professionalism, we promise a full refund if you fail exam.

Ping Identity Certified Professional - PingAccess Sample Questions (Q36-Q41):

NEW QUESTION # 36

A modified application now requires additional attributes to be passed in the headers. What needs to be modified in order to pass the additional attributes?

- A. JWT Identity Mapping
- B. HTTP Request Header Rule
- C. Web Session Attribute Rule
- D. Header Identity Mapping

Answer: D

Explanation:

To pass user attributes into HTTP headers for applications, PingAccess uses Identity Mappings. When attributes need to be passed specifically as headers, the administrator must update the Header Identity Mapping.

Exact Extract:

"Header identity mappings map attributes from a user's web session to HTTP headers that are then sent to the back-end application."

* Option A (HTTP Request Header Rule) is incorrect - this adds or modifies static request headers, not user attributes.

* Option B (Header Identity Mapping) is correct - this maps identity attributes into headers dynamically.

* Option C (JWT Identity Mapping) is incorrect - that's used for passing attributes as claims in JWTs.

* Option D (Web Session Attribute Rule) is incorrect - that is for access control evaluation, not propagation of attributes.

Reference: PingAccess Administration Guide - Identity Mapping (Header Identity Mapping)

NEW QUESTION # 37

Any user who accesses an application must be in sales unless the user is a manager in the marketing department. The administrator creates the following web session rules:

* (A) Look for department = sales

* (B) Look for department = marketing

* (C) Look for job_title = manager

Which additional actions should be taken to properly enforce this requirement?

- A. Create a Rule Set (D) to accept ANY (A) # Create a Rule Set (E) to accept ALL (B) (C) # Create a Rule Set Group (F) to accept ANY (D) (E) # Add Rule Set Group (F) to the resource
- B. Create a Rule Set (D) to accept ALL (A) (B AND C) # Add Rule Set (D) to the resource
- C. Create a Rule Set (D) to accept ANY (A) (B) (C) # Add Rule Set (D) to the resource
- D. Create a Rule Set (D) to accept ALL (A) # Create a Rule Set (E) to accept ANY (B) (C) # Create a Rule Set Group (F) to accept ALL (D) (E) # Add Rule Set Group (F) to the resource

Answer: A

Explanation:

The requirement is:

- * Allow access if user is in sales
- * OR if user is in marketing AND is a manager

This is logically represented as:

(A) OR (B AND C)

To configure this in PingAccess:

- * Rule Set (D) = ANY (A)
- * Rule Set (E) = ALL (B, C)
- * Rule Set Group (F) = ANY (D, E)
- * Assign Group (F) to the resource

This exactly matches Option D.

- * Option A is incorrect - requires both A and (B AND C), which is stricter than the requirement.
- * Option B is incorrect - ANY(A, B, C) would allow users in marketing or managers without requiring both.
- * Option C is incorrect - it uses ALL(D, E), which would require both conditions instead of OR.
- * Option D is correct - it models (A OR (B AND C)).

NEW QUESTION # 38

An organization wants to take advantage of a new product feature that requires upgrading the PingAccess cluster from 7.3 to the current version. The administrator downloads the required files and places the files on the PingAccess servers. What should the administrator do next?

- **A. Upgrade the Admin Console.**
- B. Upgrade the Replica Admin.
- C. Disable cluster communication.
- D. Disable Key Rolling.

Answer: A

Explanation:

When upgrading a PingAccess cluster, the Admin Console node must always be upgraded first before any replica admin or engine nodes. This ensures that the configuration and schema changes introduced in the new version are properly applied and replicated. Exact Extract (from PingAccess documentation):

"In a clustered environment, you must first upgrade the administrative console node before upgrading any replica administrative nodes or engine nodes." Why A is correct:

* A. Upgrade the Admin Console- This is correct because the admin console node acts as the configuration master in a PingAccess cluster. Upgrading it first ensures the new version schema is available to replicas and engines.

Why the other options are incorrect:

* B. Disable cluster communication- This is not required for standard upgrades. Cluster communication remains in place to synchronize changes after the upgrade.

* C. Disable Key Rolling- Key rolling is unrelated to the upgrade process. It is a feature used for key rotation, not version upgrades.

* D. Upgrade the Replica Admin- This is incorrect because upgrading a replica admin before the primary administrative console is against the documented procedure and would cause replication issues.

NEW QUESTION # 39

What is the default port for the administrative console?

- **A. 0**
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

When PingAccess is first installed, the Administrative Console (the web-based UI for managing configuration) is bound to a default port of 9000. This is documented in the installation and configuration guides:

* Exact Extract from documentation:

"By default, the administrative console is available at <https://<host>:9000>." (PingAccess Installation Guide - Default Ports) This means that unless the administrator has explicitly changed the port in `run.properties` or during installation, the console will always be available on port 9000.

Option Analysis:

* A. 9000#Correct. Default administrative console port.

* B. 3000#Incorrect. This is not a PingAccess default port.

* C. 9090#Incorrect. Sometimes used by other Ping products for APIs, but not the PingAccess admin console.

* D. 3030#Incorrect. Not a default PingAccess port.

Reference: PingAccess Installation Guide - Default Administrative Console Port (9000).

NEW QUESTION # 40

Which two browsers are supported for the PingAccess Admin console? (Choose 2 answers.)

- A. Brave
- B. Opera
- C. Apple Safari
- **D. Microsoft Edge**
- **E. Google Chrome**

Answer: D,E

Explanation:

PingAccess officially supports Google Chrome and Microsoft Edge for the administrative console. Other browsers (Safari, Opera, Brave) may work but are not officially supported.

Exact Extract:

"The PingAccess administrative console is supported on current versions of Google Chrome and Microsoft Edge."

* Option A (Safari) is not officially supported.

* Option B (Opera) is not supported.

* Option C (Google Chrome) is correct.

* Option D (Microsoft Edge) is correct.

* Option E (Brave) is not officially supported.
